Billing System Guide

JP's Logistics & More

Invoices, payments, reports, bills and expenses

For the people who make invoices, payments and expenses

Version October 19, 2026 · The examples use simulated customers (Marie Joseph #1001, Roseline Pierre #1002): the figures are real, calculated by the system.

H Automatic e-mails: when, what, who

I How the system calculates the price

J Common problems and answers

A Overview: the Billing system

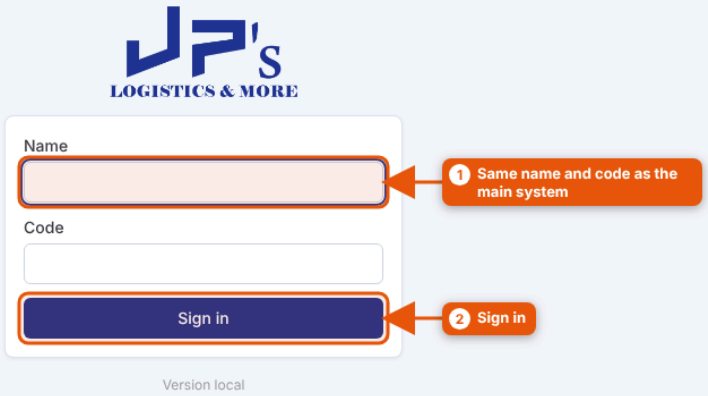

What the Billing system is for

- It is a separate site (its own address), but it uses the **same database** as the main system: what one records shows up in the other within seconds.
- You sign in with the **same name and code**. The administrator gives the person "Billing system" access in Users & access.
- Invoices and receipts go **by e-mail by themselves**, with a PDF attached. The PDFs are kept.

A billing person's day

1. Receivables → **Invoice**: make the invoices of the receipts that are ready.
2. **Enter payments**: record what customers paid.
3. **Receivables** and **Daily payment report**: see what is owed and what came in today.
4. **Payables**: suppliers' bills to pay.
5. **Expenses**: cargo costs and small everyday expenses.
6. **Shipments report**: compare what each shipment billed with what it cost.

B Sign in and the menu

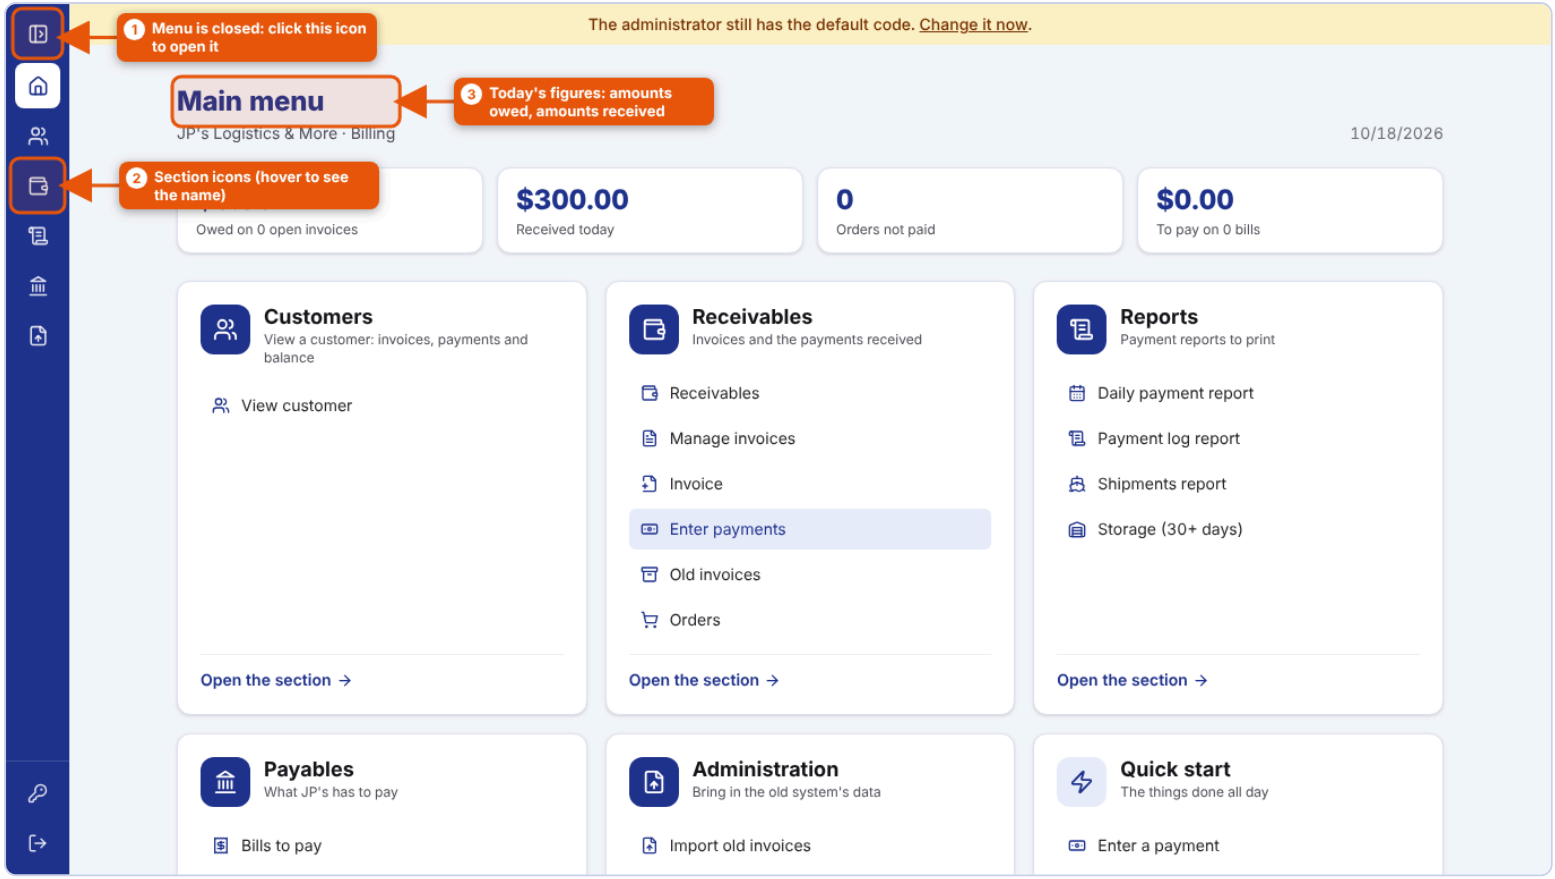

Why: Billing is a separate site that uses the same database. Same name, same code. The menu starts closed.

Sign in with the same name and code you use in the main system (the person must have "Billing system" access, Step B).

1. Same name and code as the main system
2. Sign in

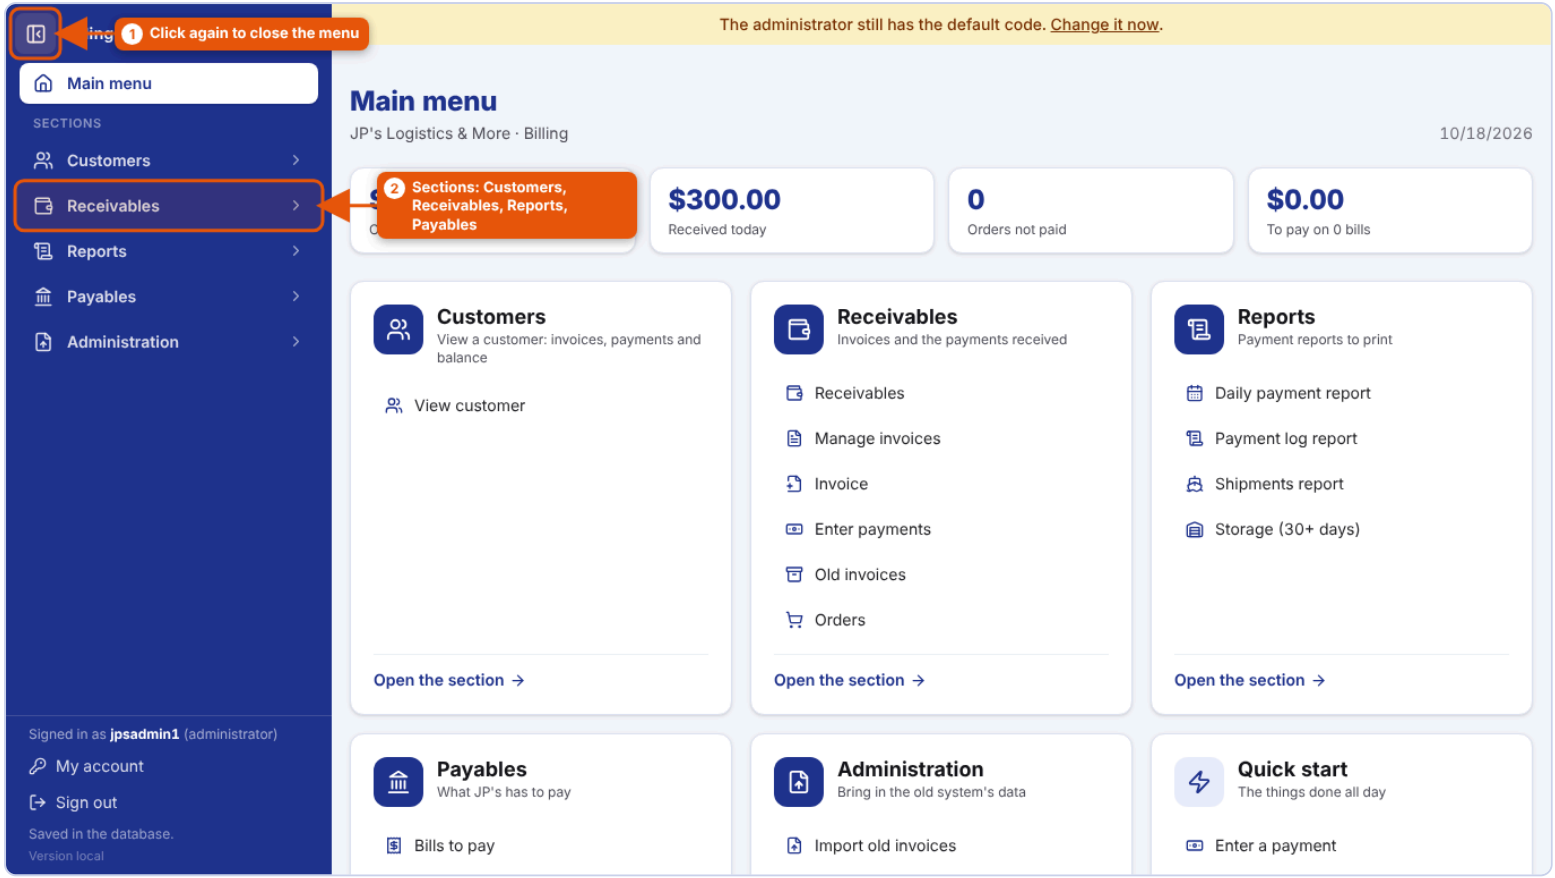

B Sign in and the menu

The Billing main menu, with the menu closed (thin column of icons): amounts owed, what came in today, unpaid orders, bills to pay. The small icon at the top left opens the menu.

1. Menu is closed: click this icon to open it
2. Section icons (hover to see the name)
3. Today's figures: amounts owed, amounts received

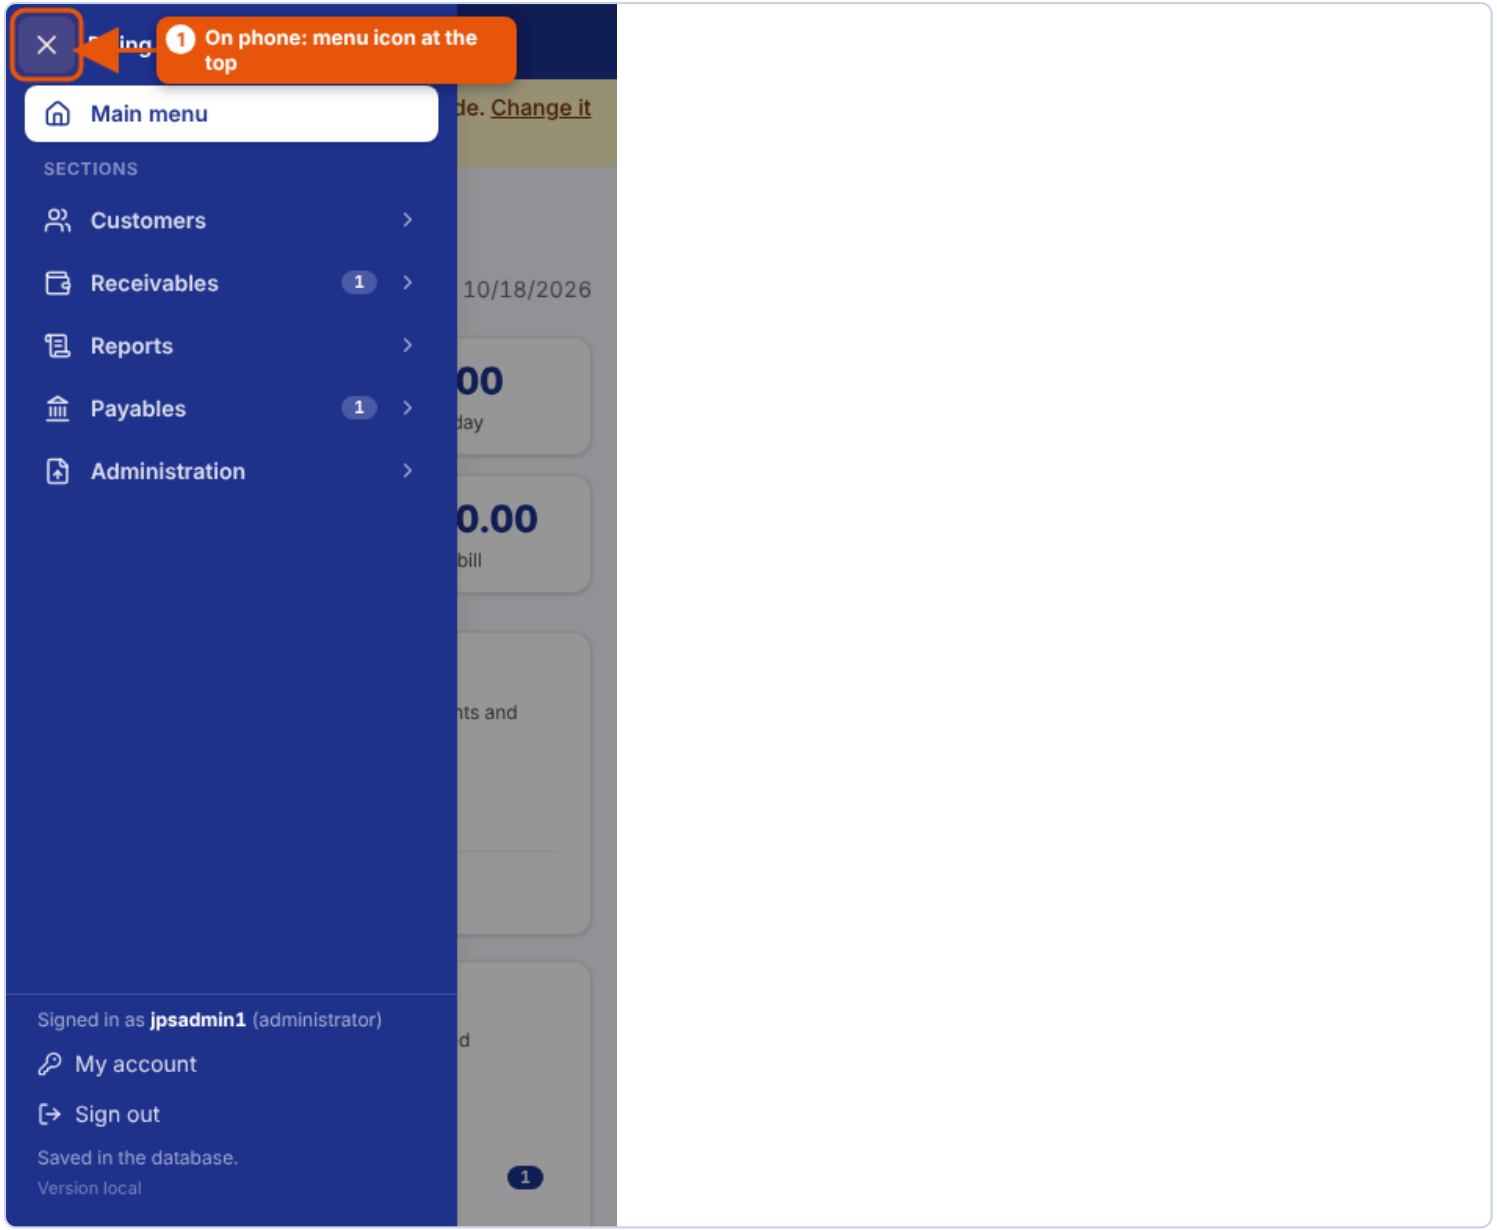

B Sign in and the menu

The menu open: sections with their names. Click the icon at the top again to close it. The system starts with the menu closed and it stays closed until you open it.

1. Click again to close the menu
2. Sections: Customers, Receivables, Reports, Payables

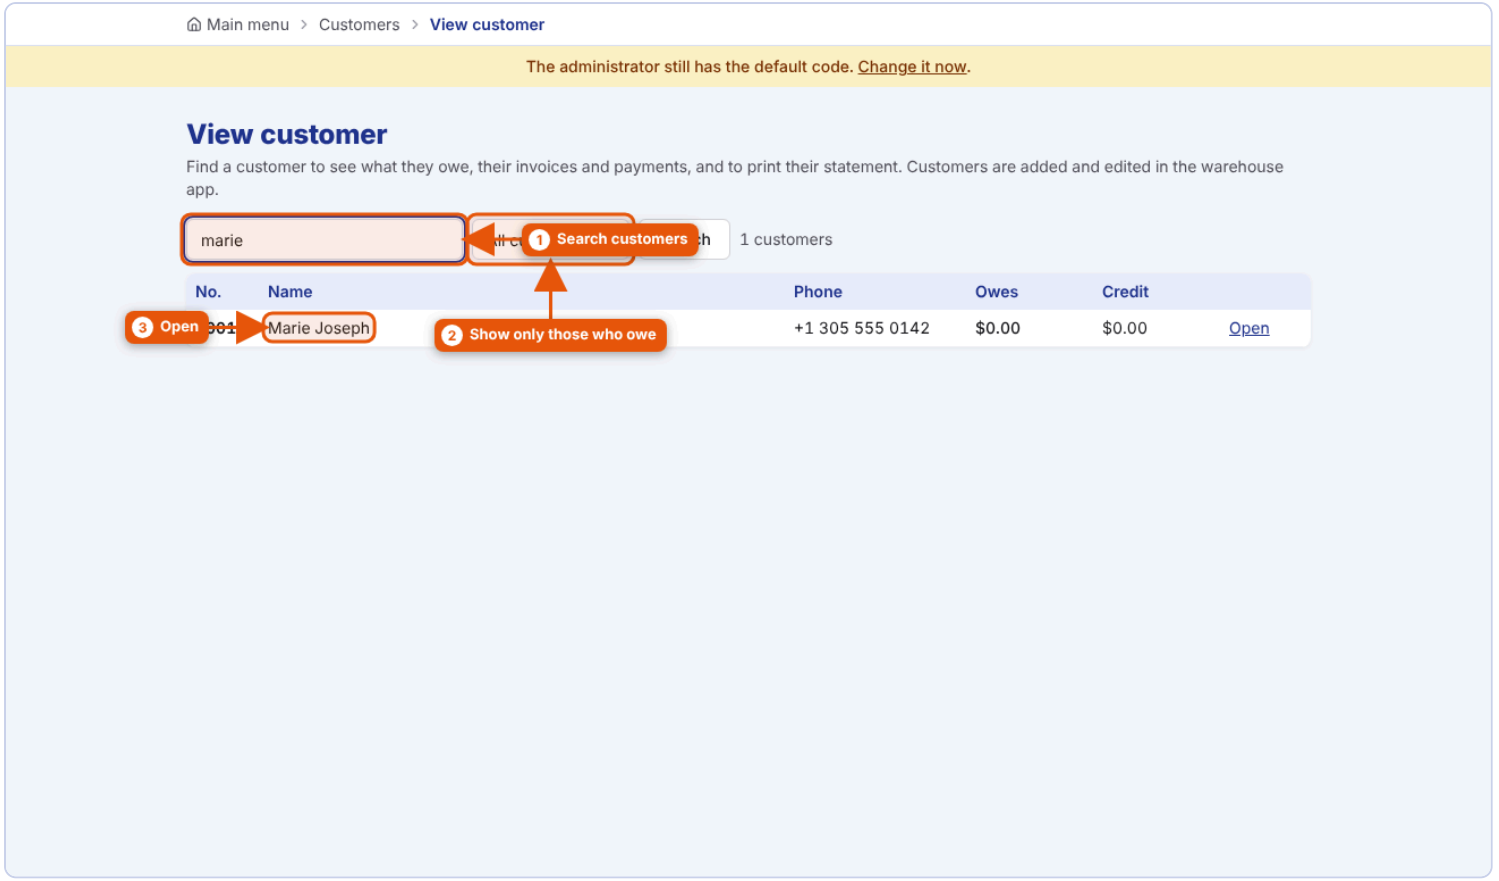

B Sign in and the menu

On a phone: a bar at the top with the menu icon; it opens the menu over the page. You can install the system like an app (Step X).

1 On phone: menu icon at the top

C Invoices and payments on an invoice

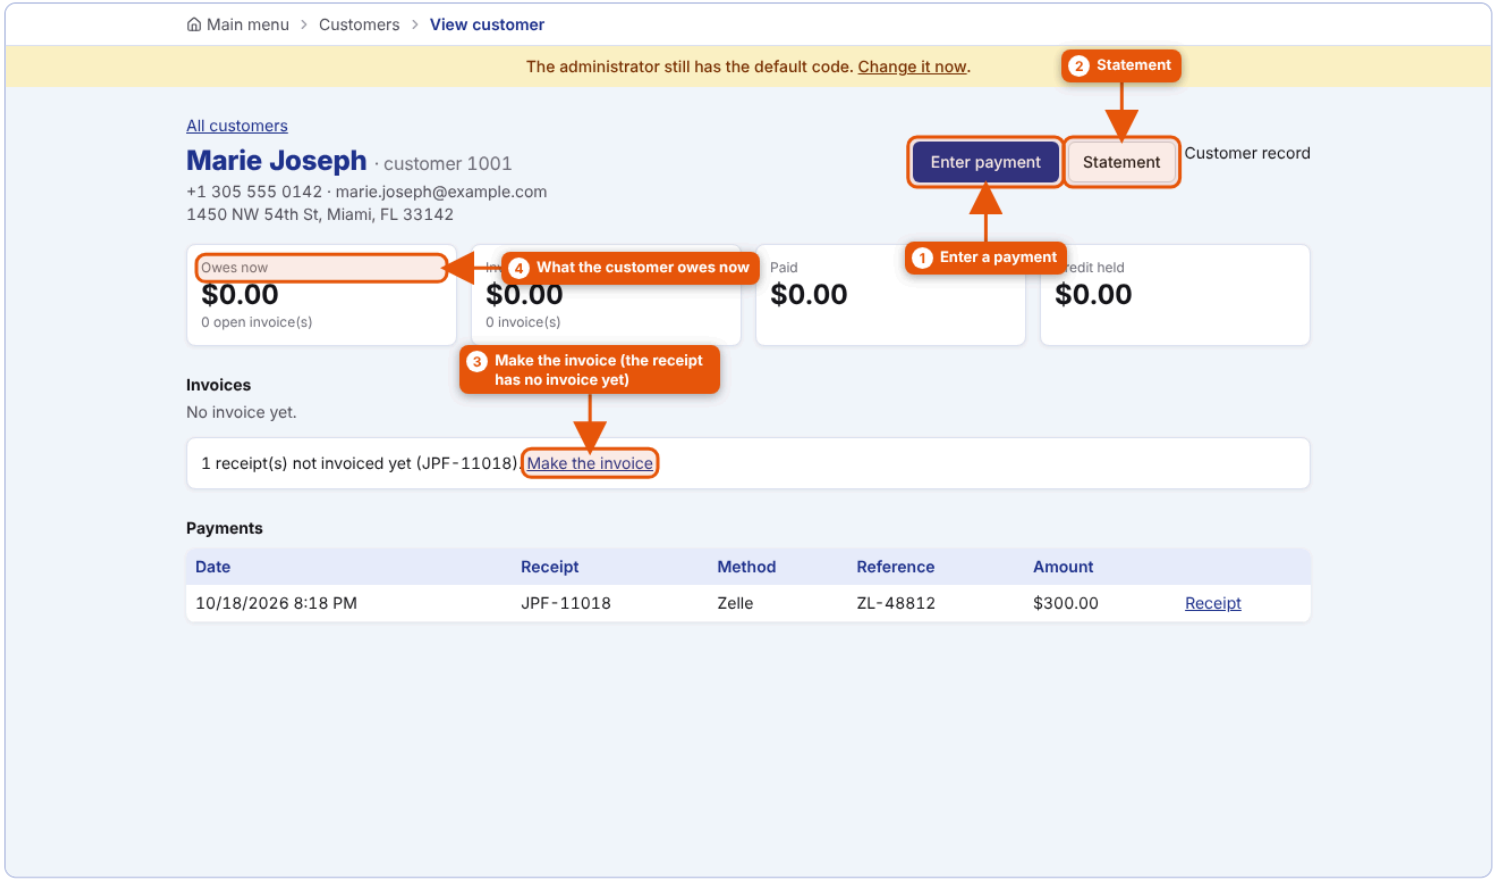

Why: The invoice goes by e-mail by itself, with a PDF attached.

Customers → View customer: look up a customer, showing only those who owe money.

1. Search customers
2. Show only those who owe
3. Open

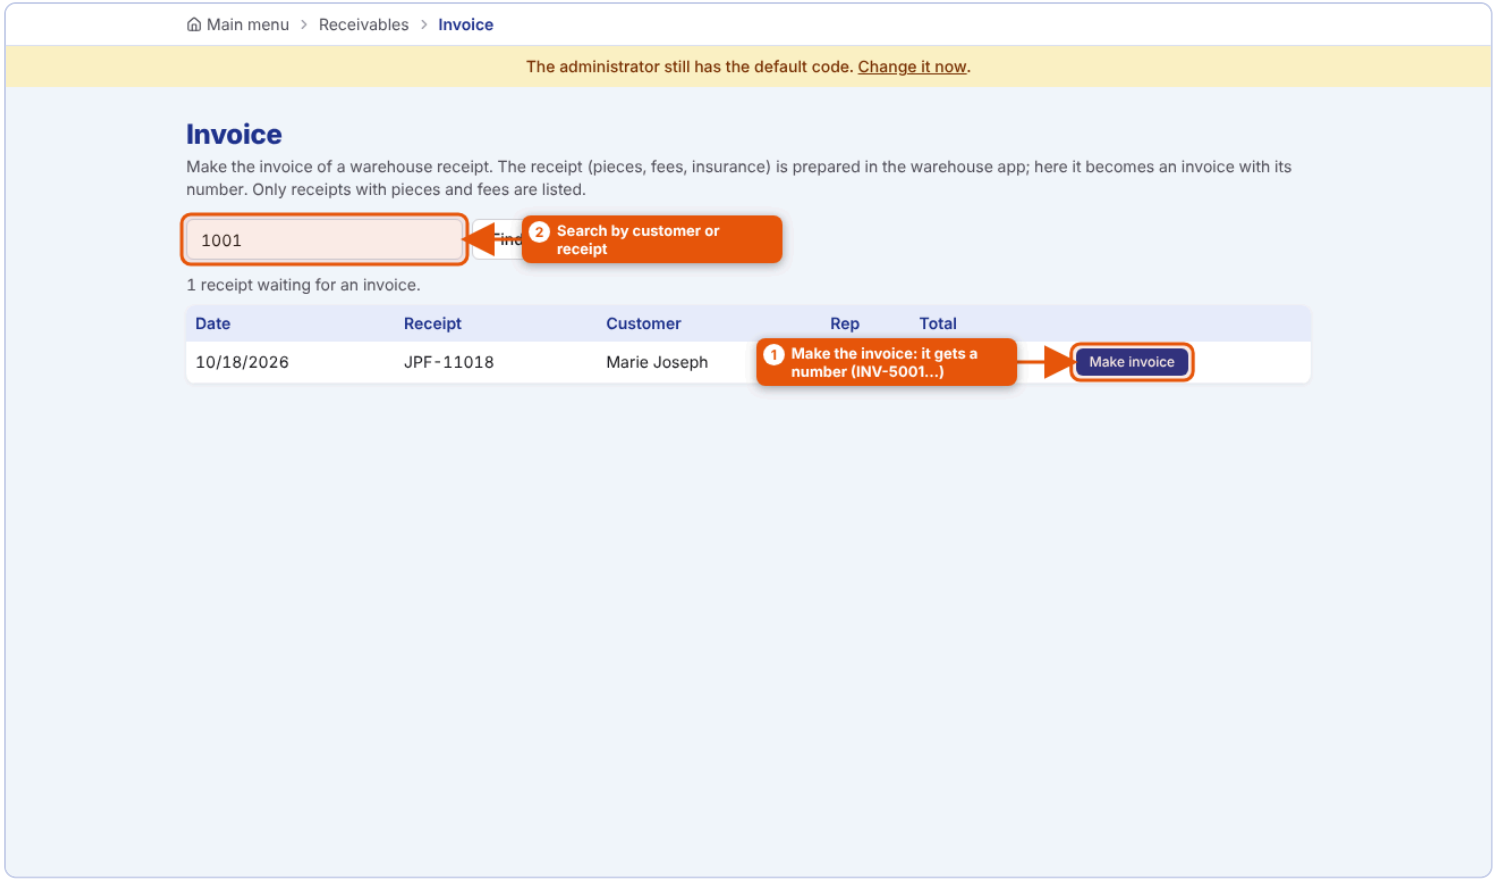

C Invoices and payments on an invoice

The customer's record: what they owe, total invoiced, paid, credit, their invoices and payments. "Make the invoice" appears if there is a receipt that does not yet have an invoice.

1. Enter a payment
2. Statement
3. Make the invoice (the receipt has no invoice yet)
4. What the customer owes now

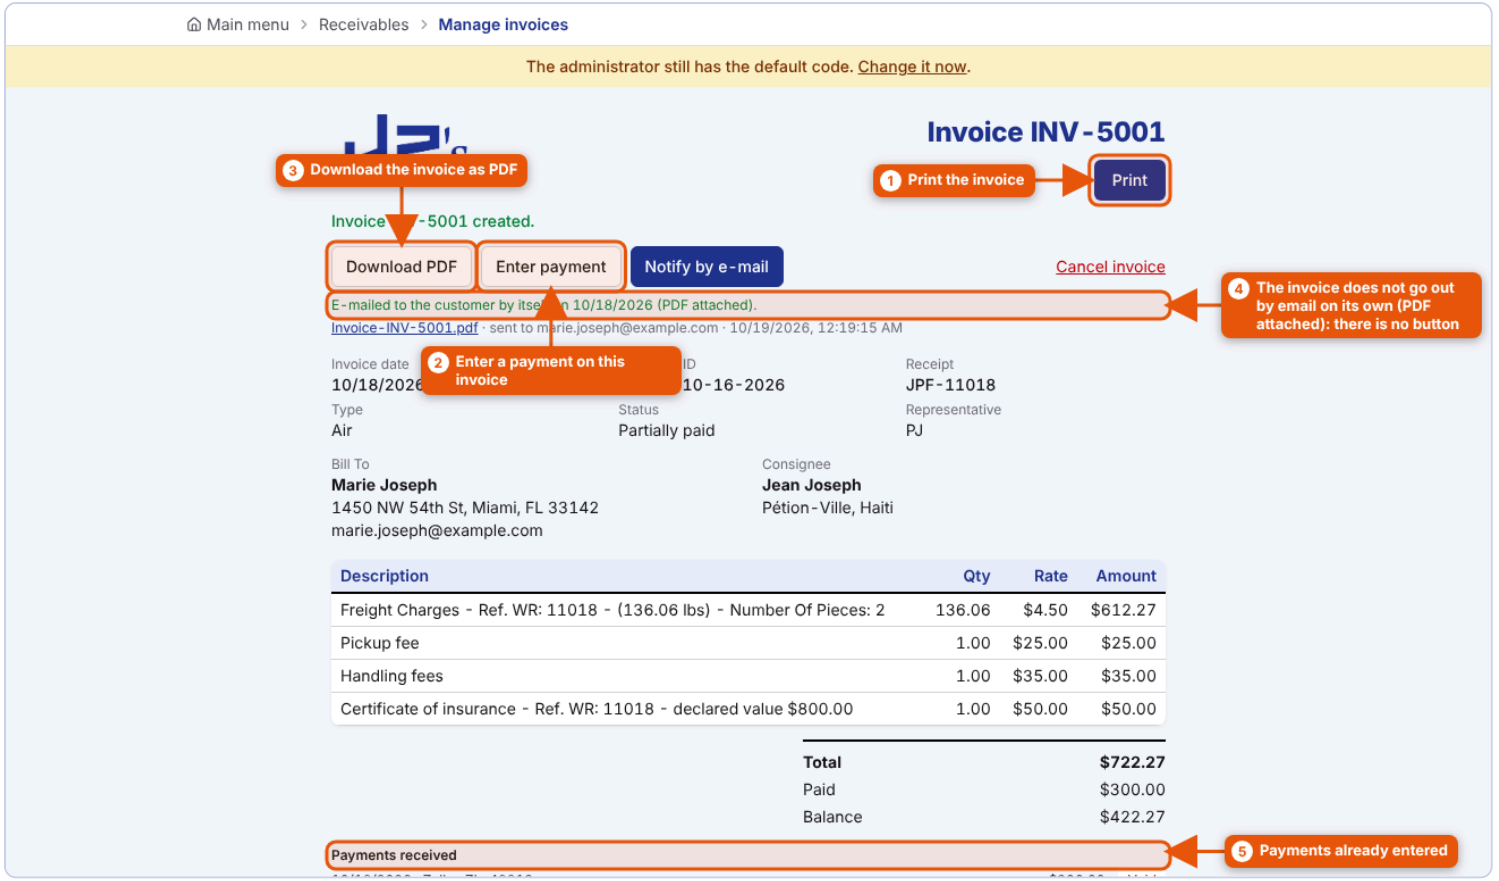

C Invoices and payments on an invoice

Receivables → Invoice: the list of receipts that have pieces and fees but no invoice yet. "Make invoice" gives it a number (INV-5001…).

1. Make the invoice: it gets a number (INV-5001…)
2. Search by customer or receipt

C Invoices and payments on an invoice

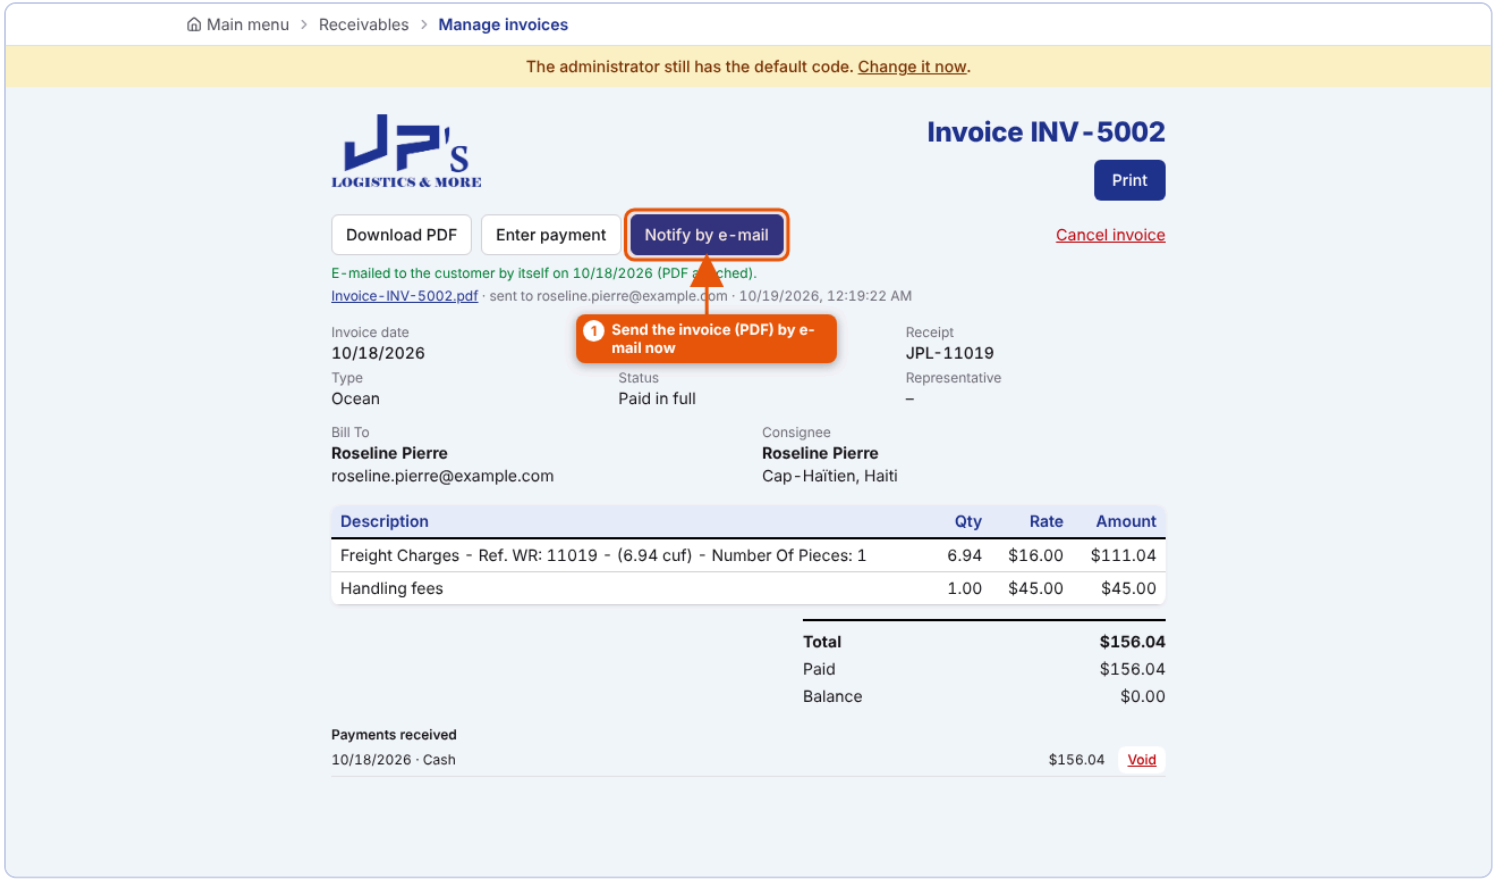

The invoice: lines, total, paid, balance and credit card fees. Buttons: Print, Download PDF, Enter payment, Cancel invoice (only if there are no payments). Each payment has a "Void" to cancel it. The invoice is e-mailed AUTOMATICALLY (with the PDF attached) a few seconds after you make it; the PDF that was sent is saved here. If it could not go out (network, no e-mail), the system retries by itself (up to 4 times) and tells you why.

1. Print the invoice
2. Enter a payment on this invoice
3. Download the invoice as PDF
4. The invoice does not go out by email on its own (PDF attached): there is no button
5. Payments already entered

> **Tip:** There is no e-mail button: you do not need to press anything.

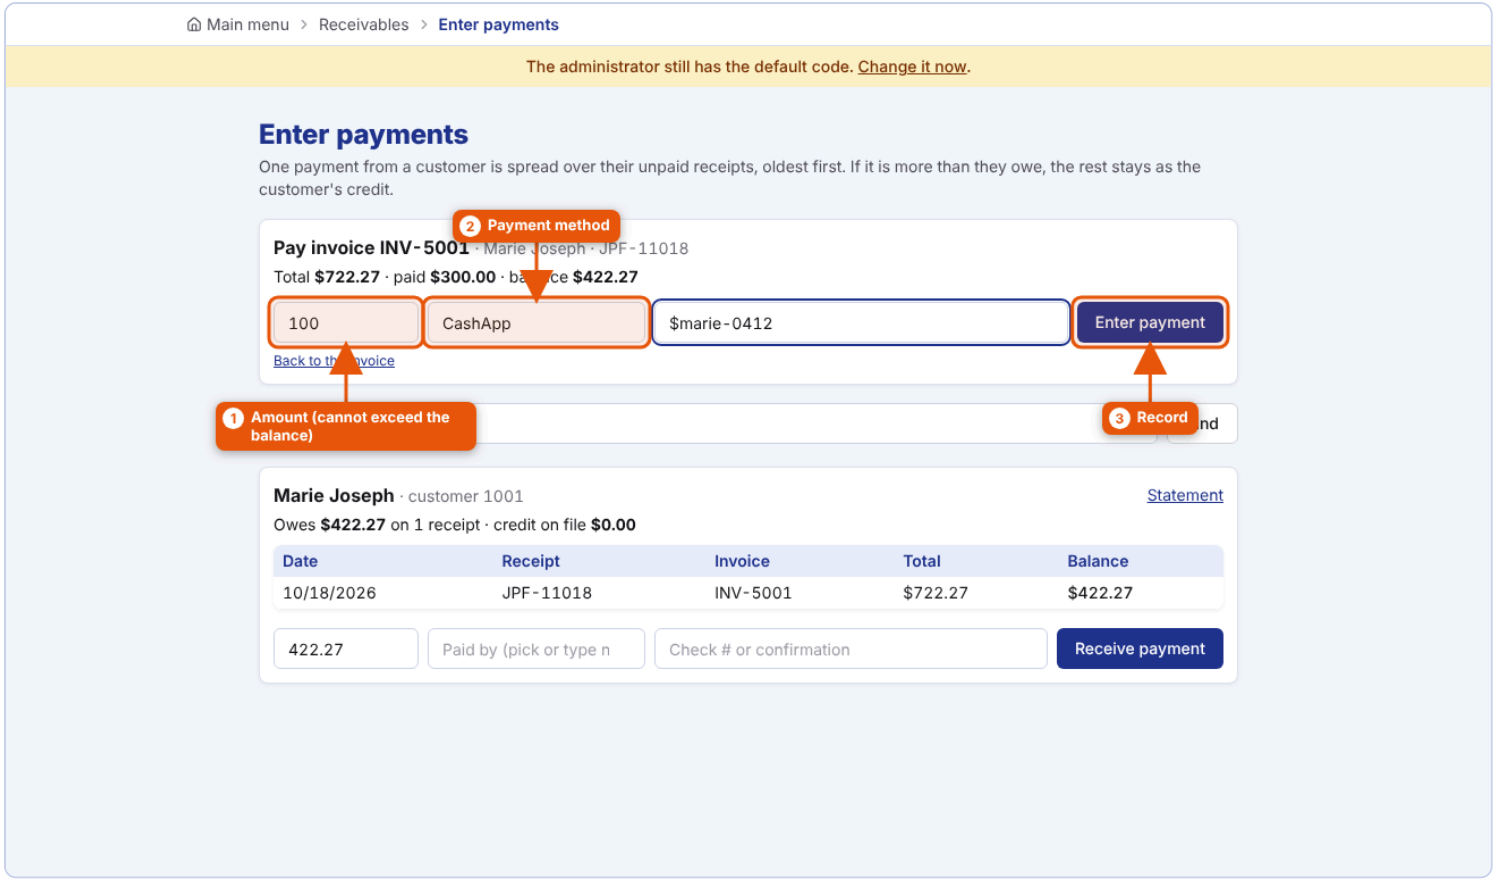

C Invoices and payments on an invoice

On the invoice: the "Notify by e-mail" button sends the invoice (PDF) to the customer now, even if it already went by itself. Same as on the other pages.

1. Send the invoice (PDF) by e-mail now

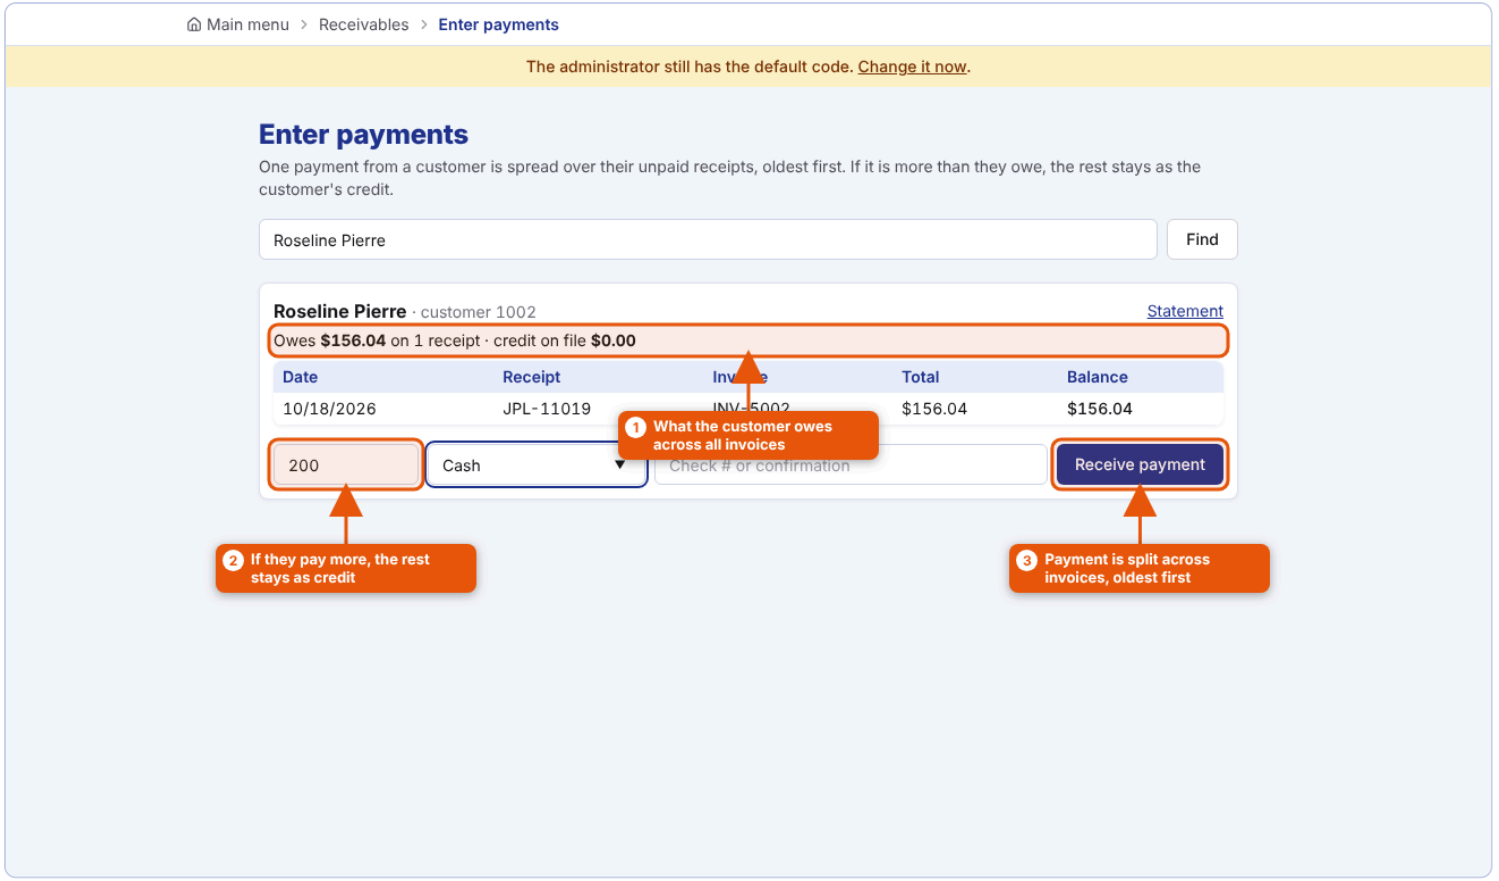

C Invoices and payments on an invoice

Enter payments on an invoice: amount (no more than the balance), method and reference.

1. Amount (cannot exceed the balance)
2. Payment method
3. Record

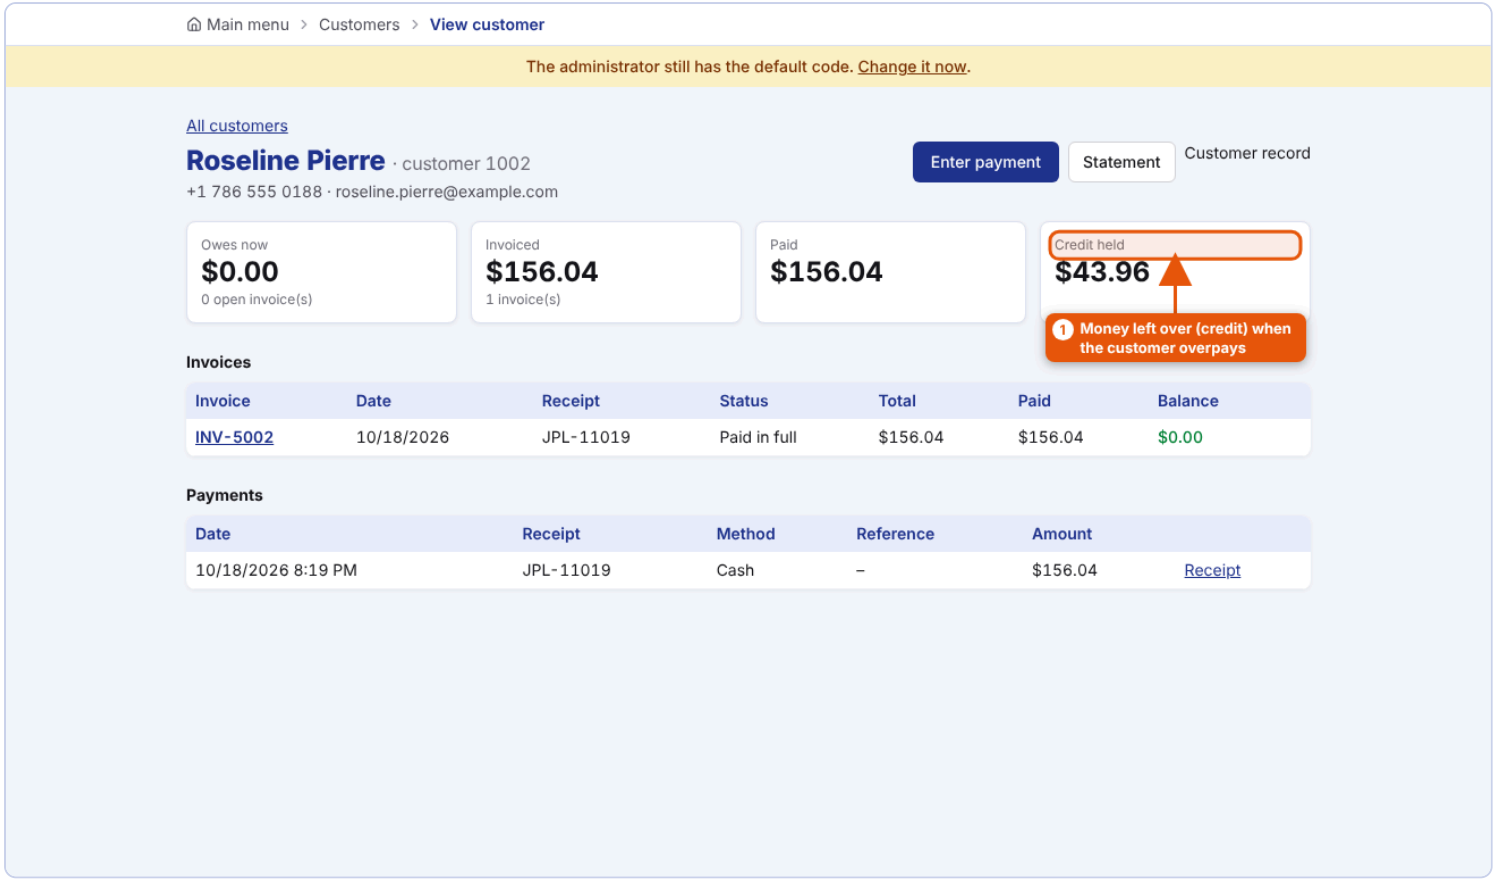

D Credit, invoice lists and reports

Enter payments for a customer: a single amount is split across their invoices, oldest first. If they pay more, the remainder becomes a credit.

1. What the customer owes across all invoices
2. If they pay more, the rest stays as credit
3. Payment is split across invoices, oldest first

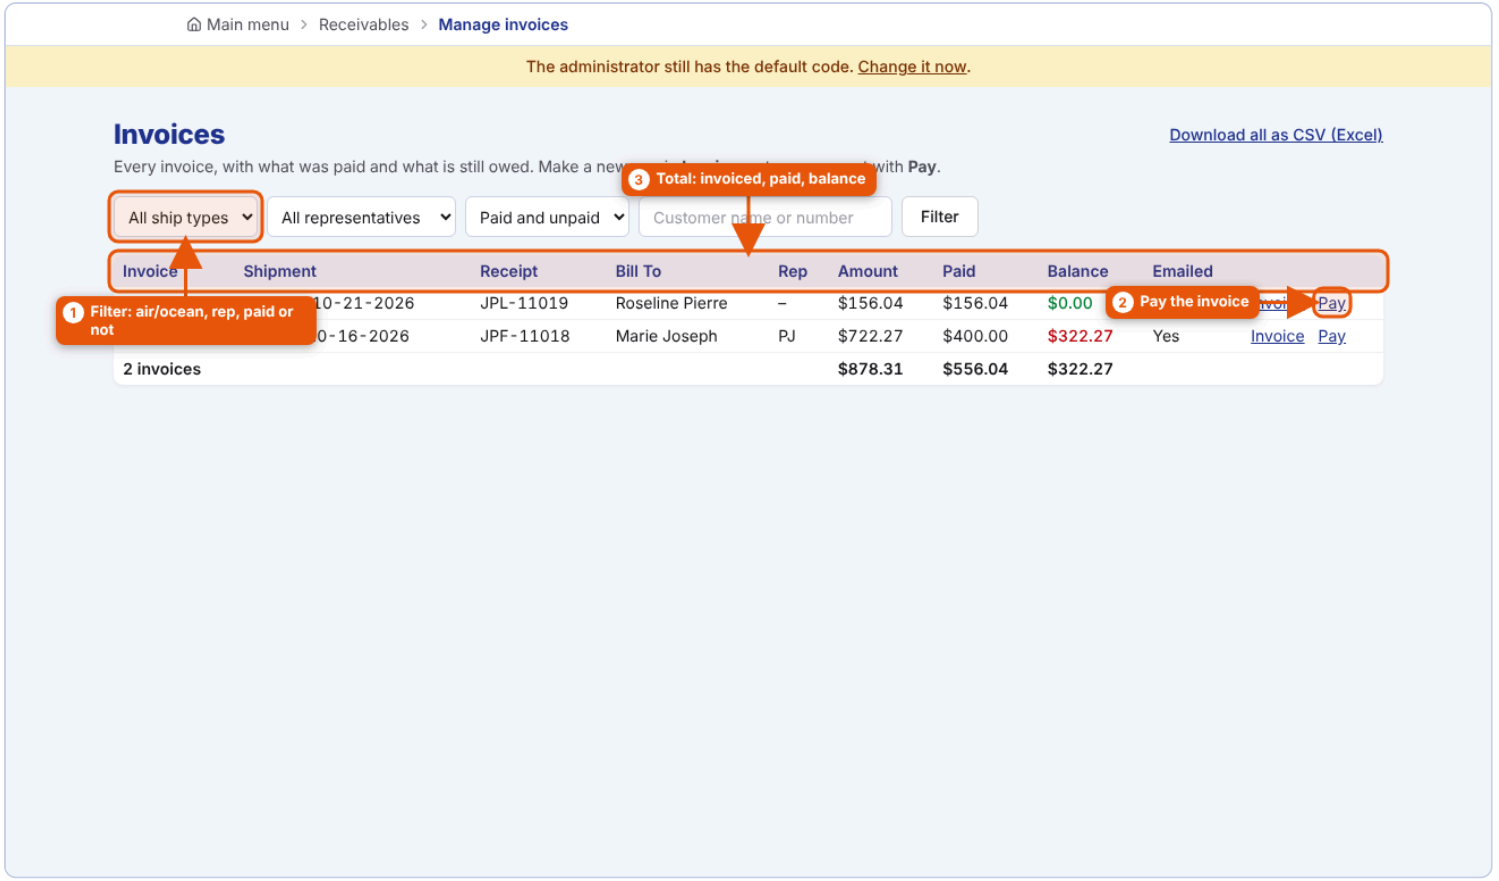

D Credit, invoice lists and reports

Example: Roseline owed $156.04 and paid $200: $43.96 stays as credit. You can apply the credit to an invoice ("Use the credit on this invoice" button).

1. Money left over (credit) when the customer overpays

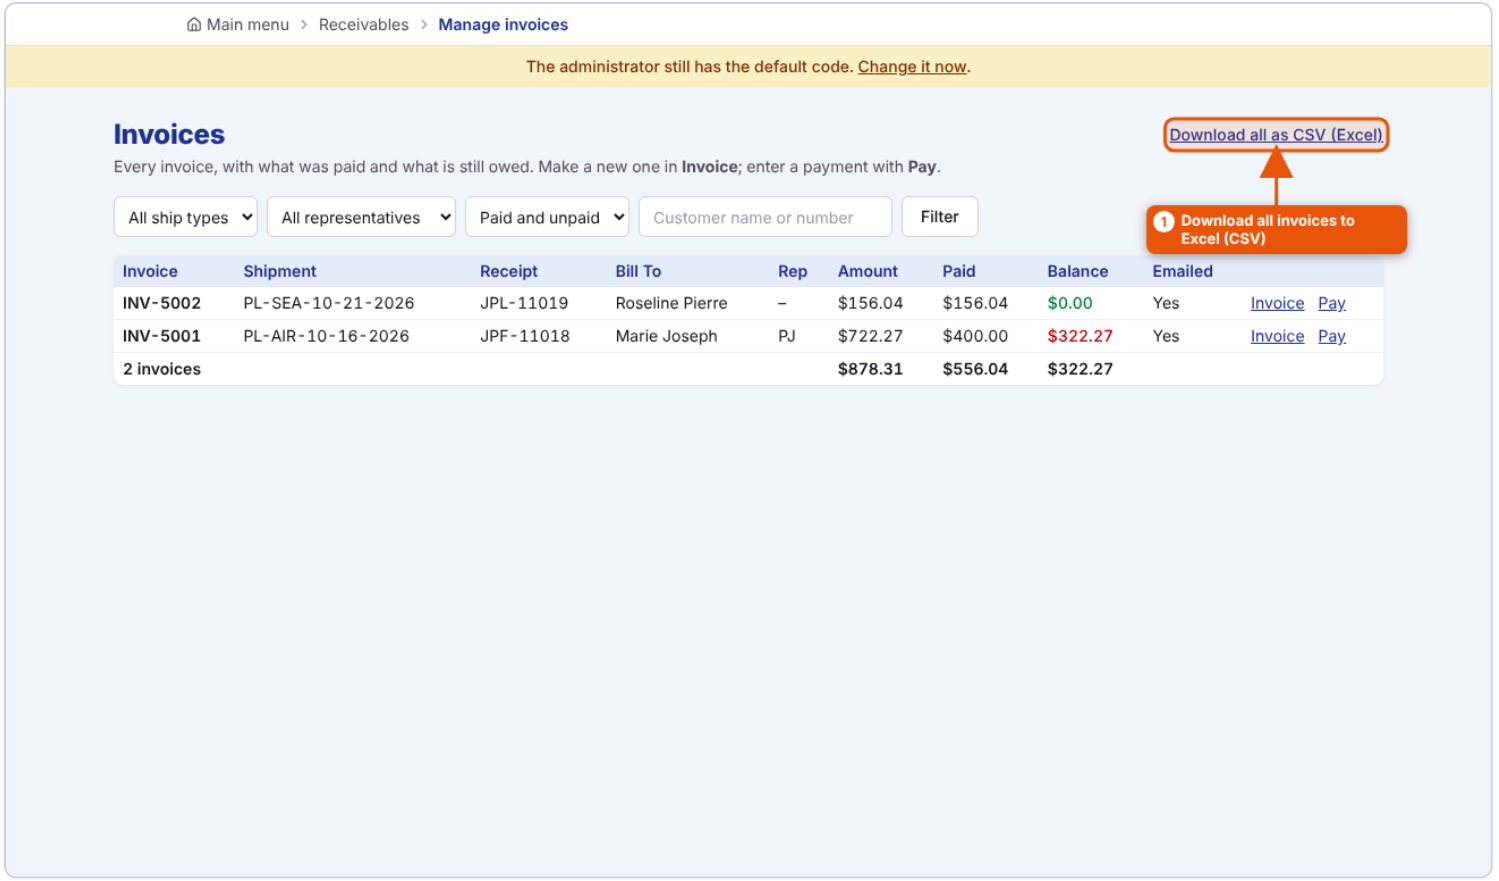

D Credit, invoice lists and reports

Manage invoices: filters (Air/Ocean, representative, paid or not), with totals.

1. Filter: air/ocean, rep, paid or not
2. Pay the invoice
3. Total: invoiced, paid, balance

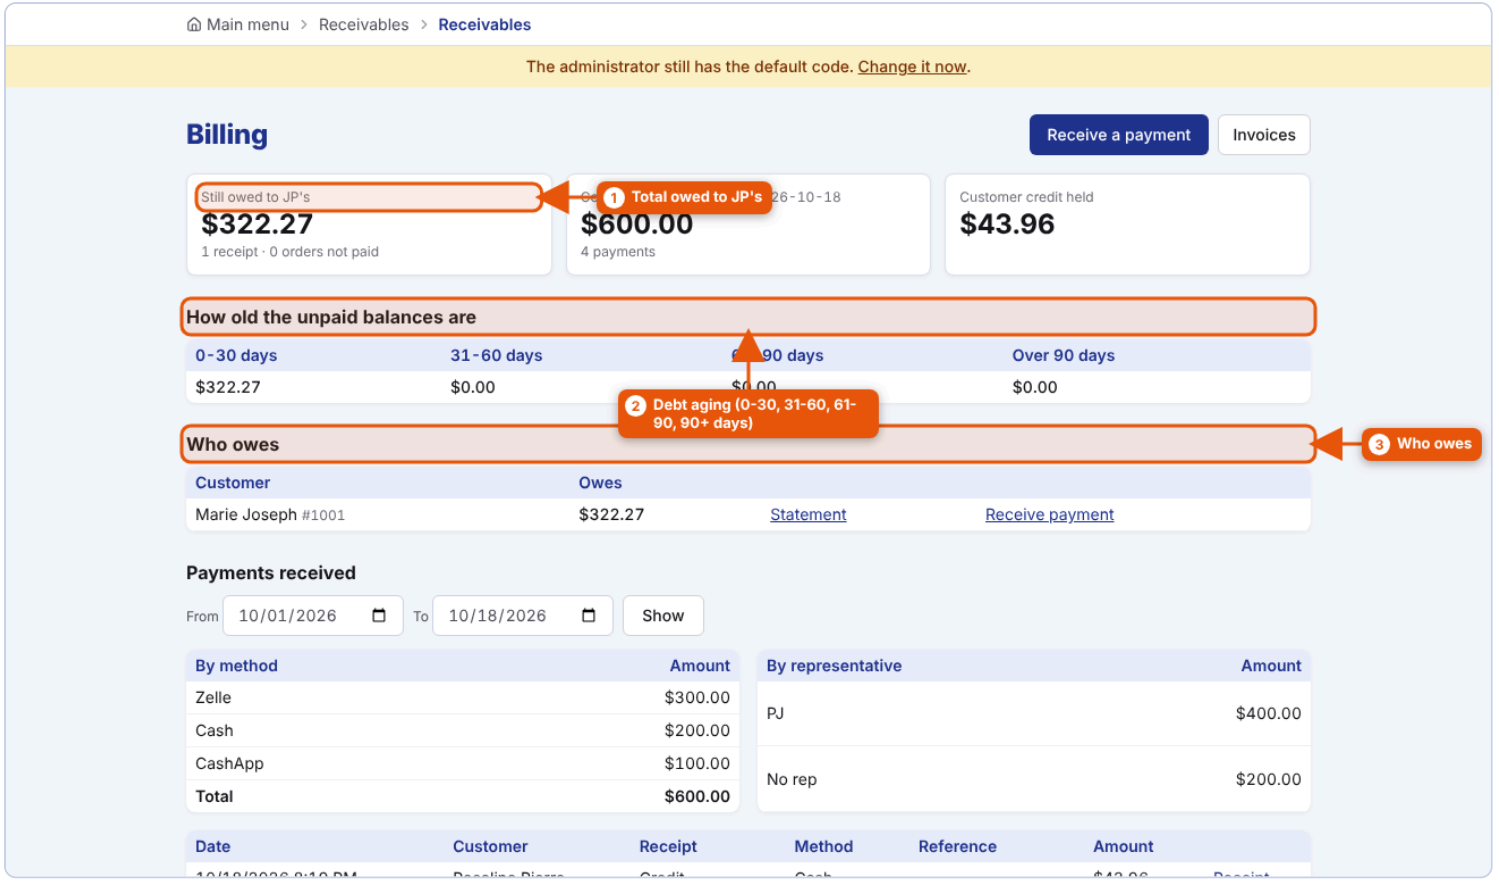

D Credit, invoice lists and reports

"Download all as CSV": all invoices in Excel.

1. Download all invoices to Excel (CSV)

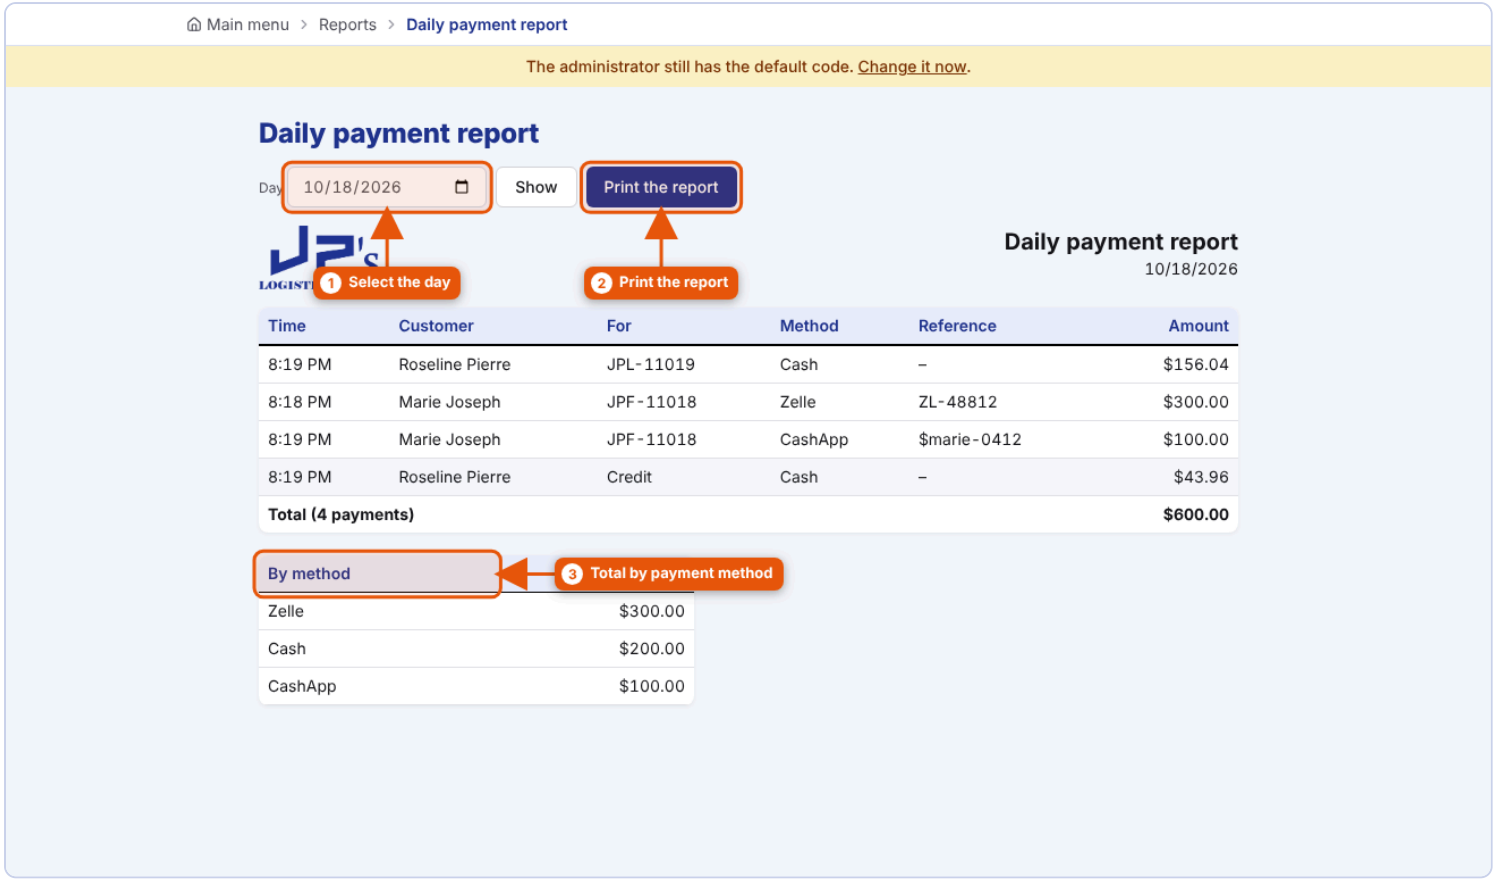

D Credit, invoice lists and reports

Receivables: what is owed to JP's, the aging of the debts, who owes, and payments received by method and by representative.

1. Total owed to JP's
2. Debt aging (0-30, 31-60, 61-90, 90+ days)
3. Who owes

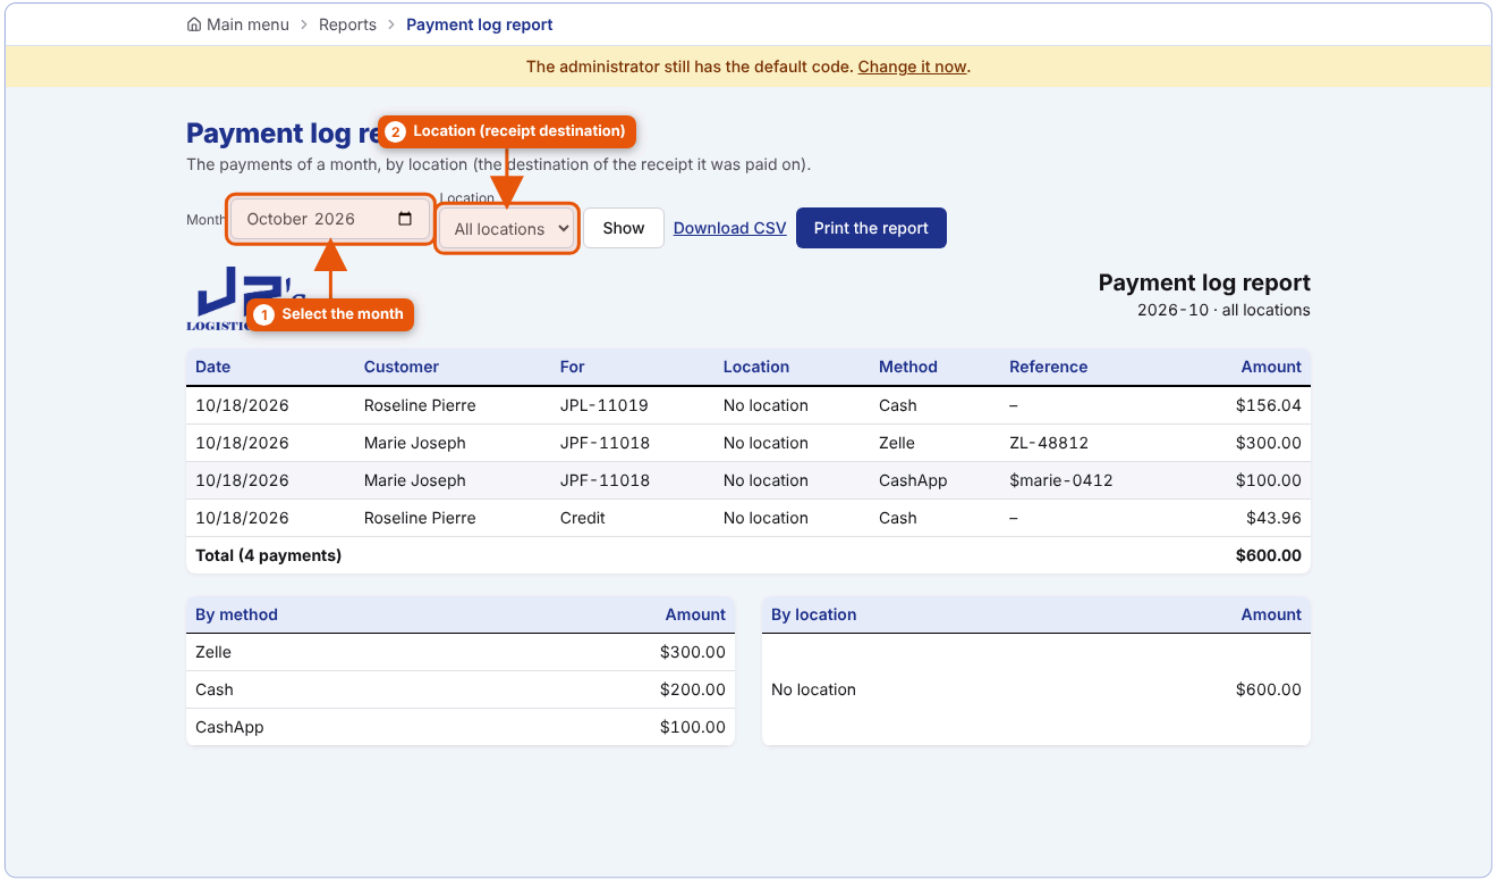

D Credit, invoice lists and reports

Daily payment report: everything received in a day, by method. The example total: $300 + $100 + $200 = $600.

1. Select the day
2. Print the report
3. Total by payment method

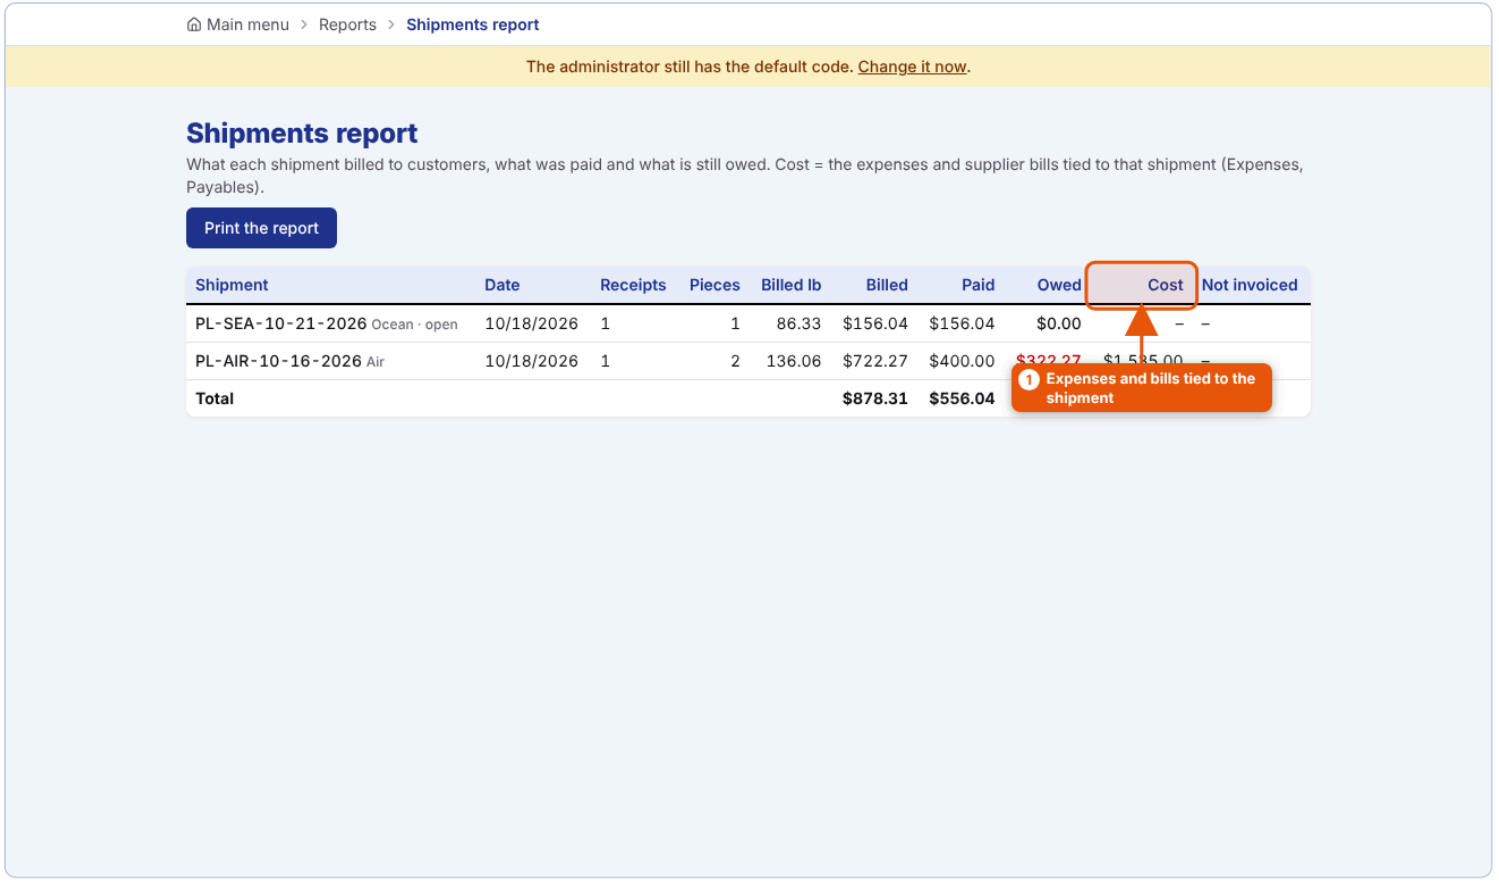

D Credit, invoice lists and reports

Payment log report: a month's payments by location (the receipt's destination). There is a "Download CSV" link.

1. Select the month
2. Location (receipt destination)

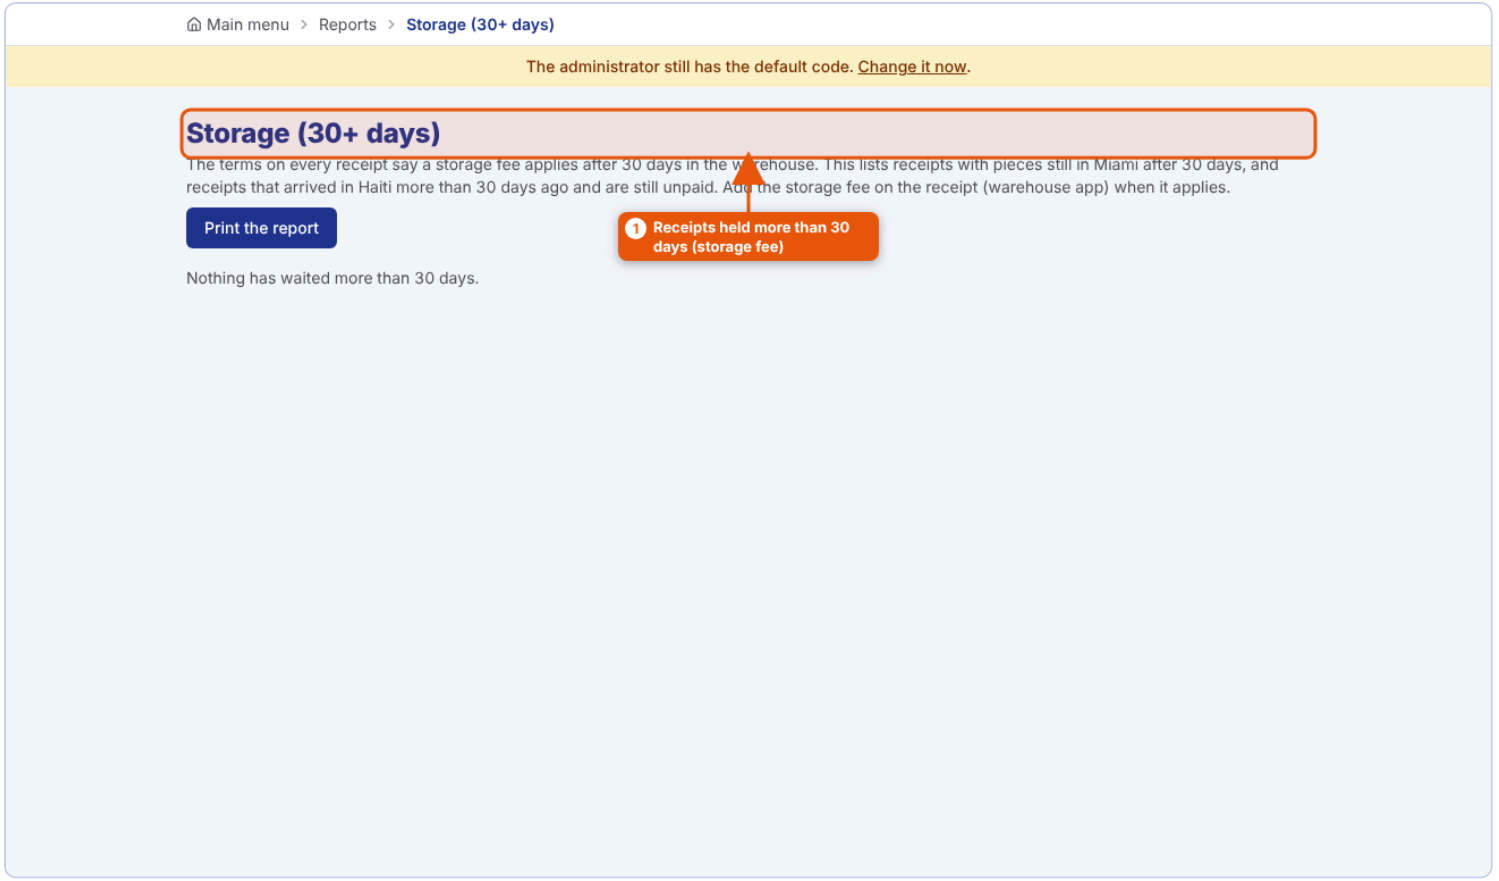

D Credit, invoice lists and reports

Shipments report: for each shipment, what was billed, paid and is still owed, plus a "Cost" column with the expenses and bills tied to that shipment (from Expenses and Payables).

1. Expenses and bills tied to the shipment

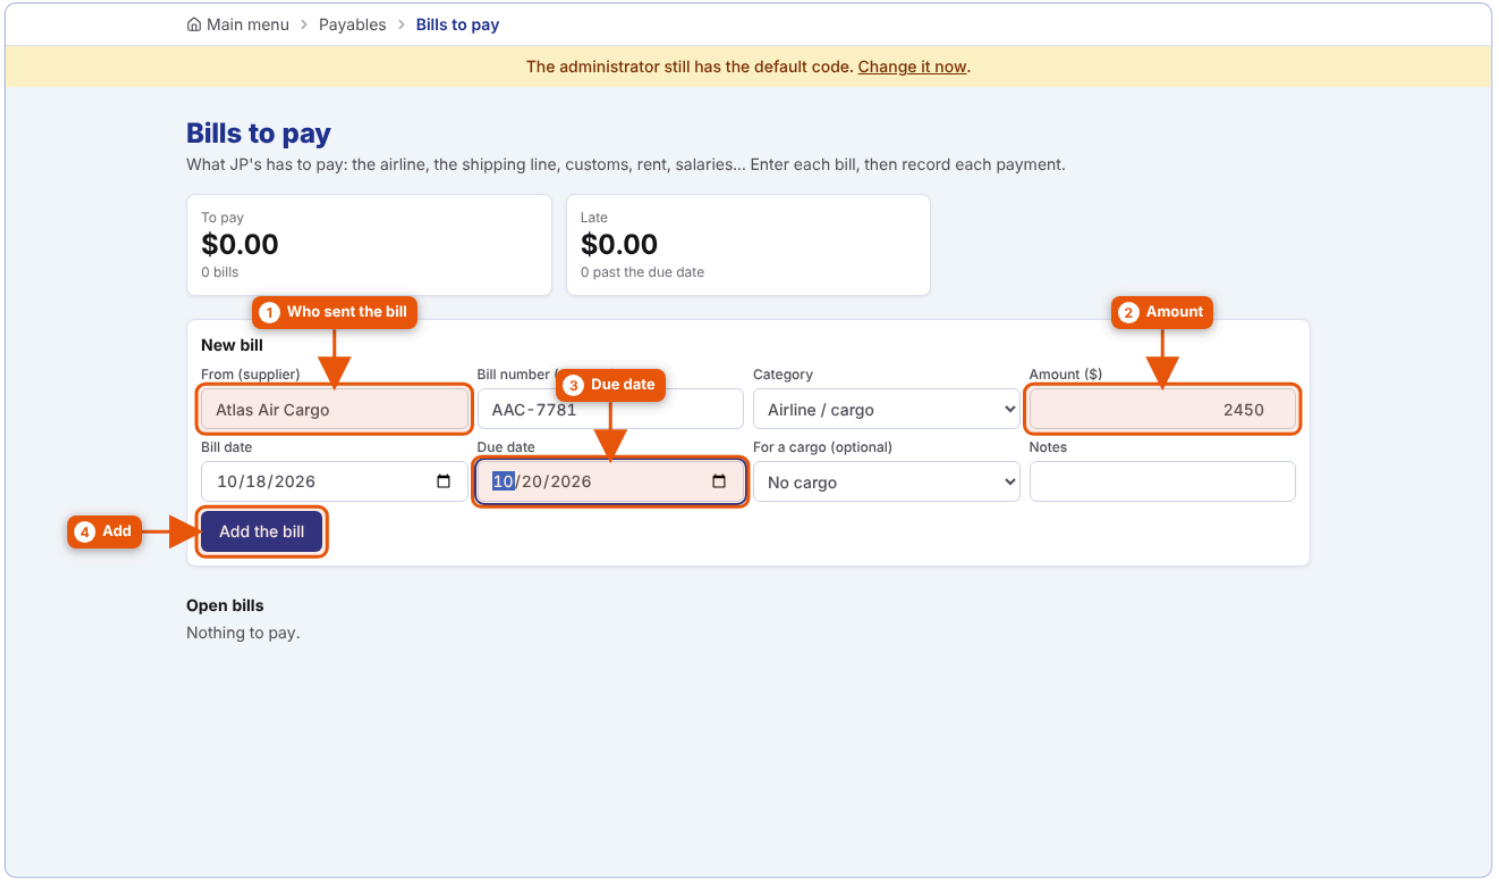

D Credit, invoice lists and reports

Storage (30+ days): receipts that have stayed more than 30 days (the terms say a storage fee applies). Add the fee to the receipt if it applies.

1. Receipts held more than 30 days (storage fee)

E Payables: bills to pay

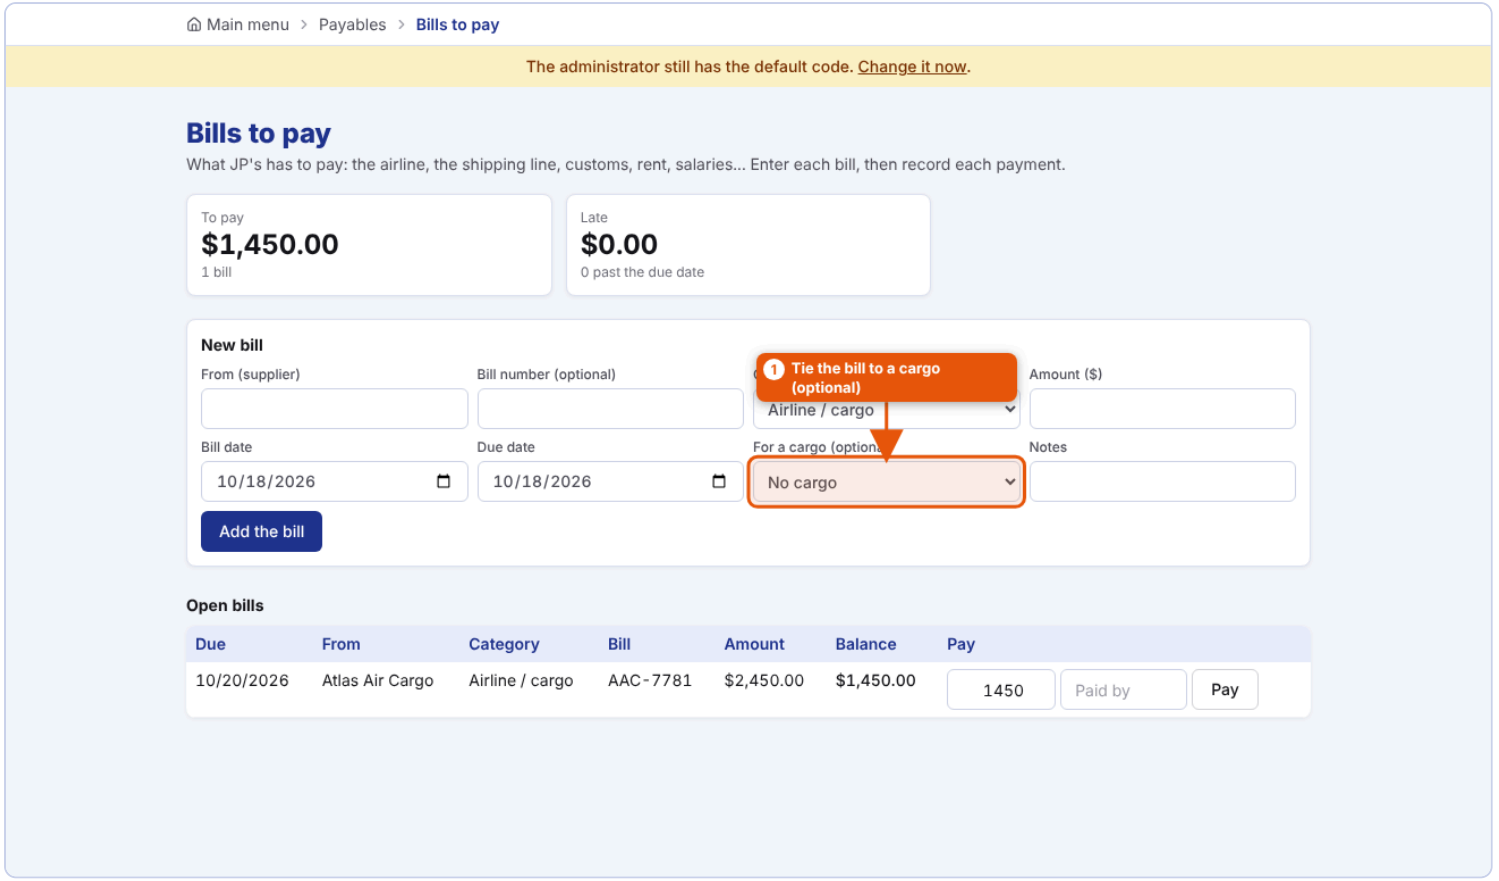

Why: What JP's owes suppliers: airline, vessel, customs, rent...

Payables → Bills to pay: enter a bill (supplier, number, category, amount, due date).

1. Who sent the bill
2. Amount
3. Due date
4. Add

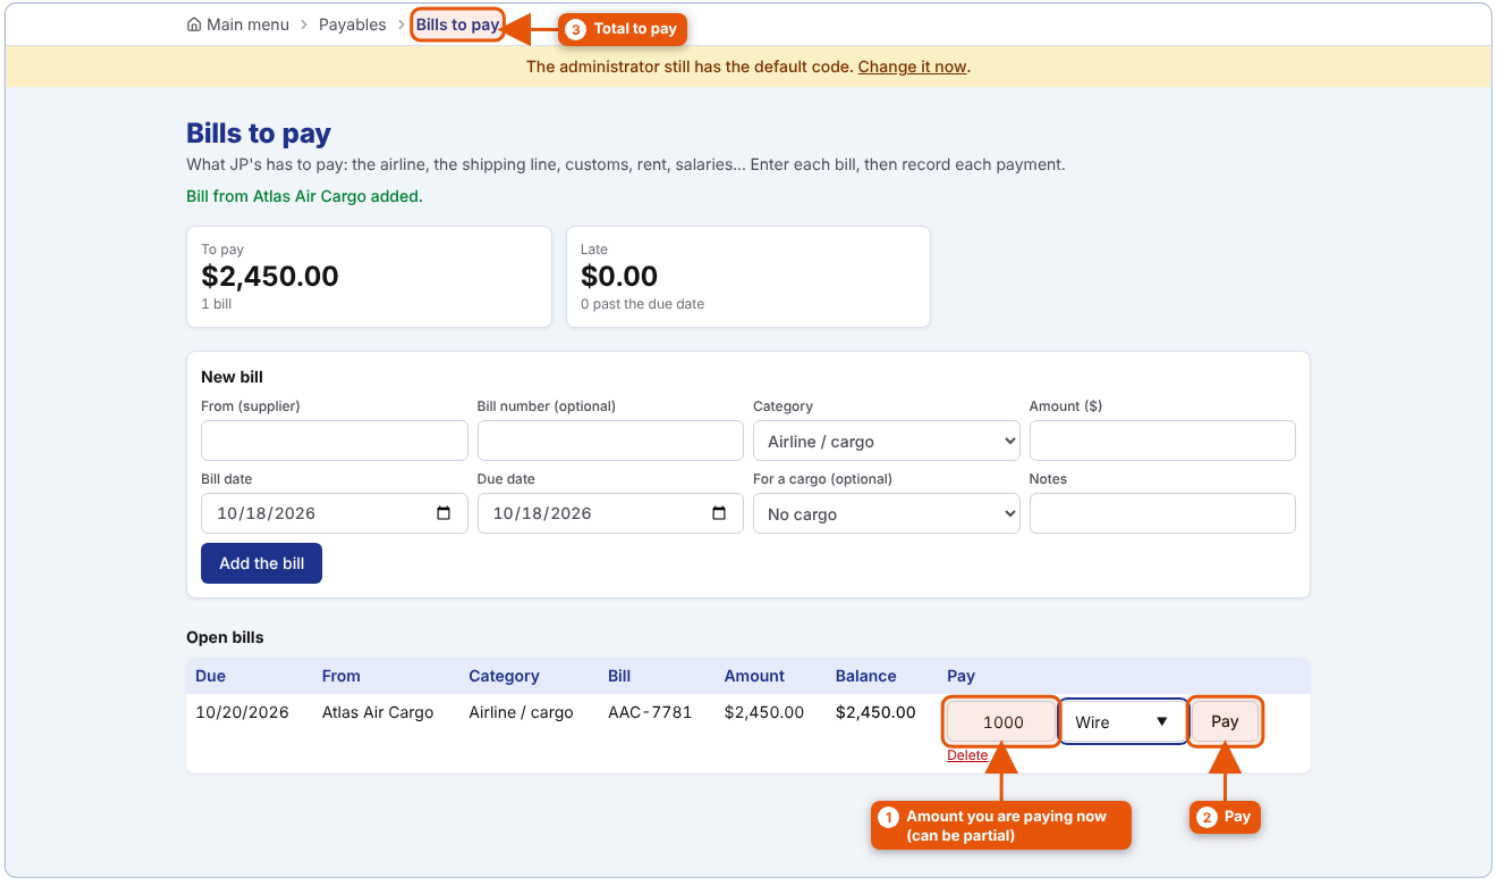

E Payables: bills to pay

The bill form has a "For a cargo (optional)" field: choose the shipment if the bill is for a specific cargo (airline, vessel, customs). It counts in that cargo's costs.

1. Tie the bill to a cargo (optional)

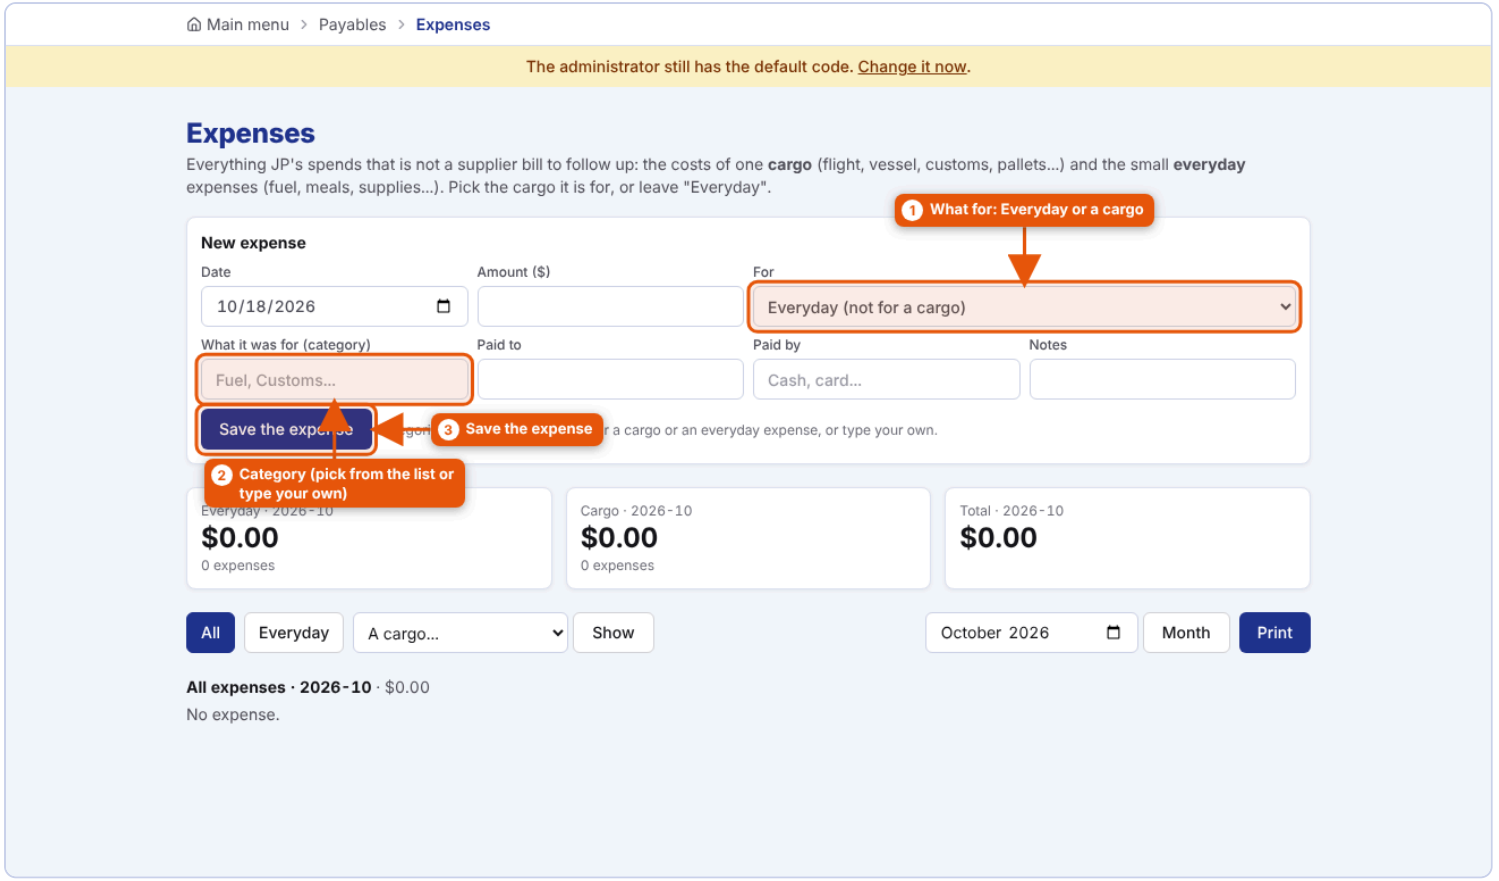

E Payables: bills to pay

Pay a bill (partial payments allowed). Overdue bills appear in red. Example: $2,450 − $1,000 = $1,450.

1. Amount you are paying now (can be partial)
2. Pay
3. Total to pay

F Expenses: by cargo and everyday

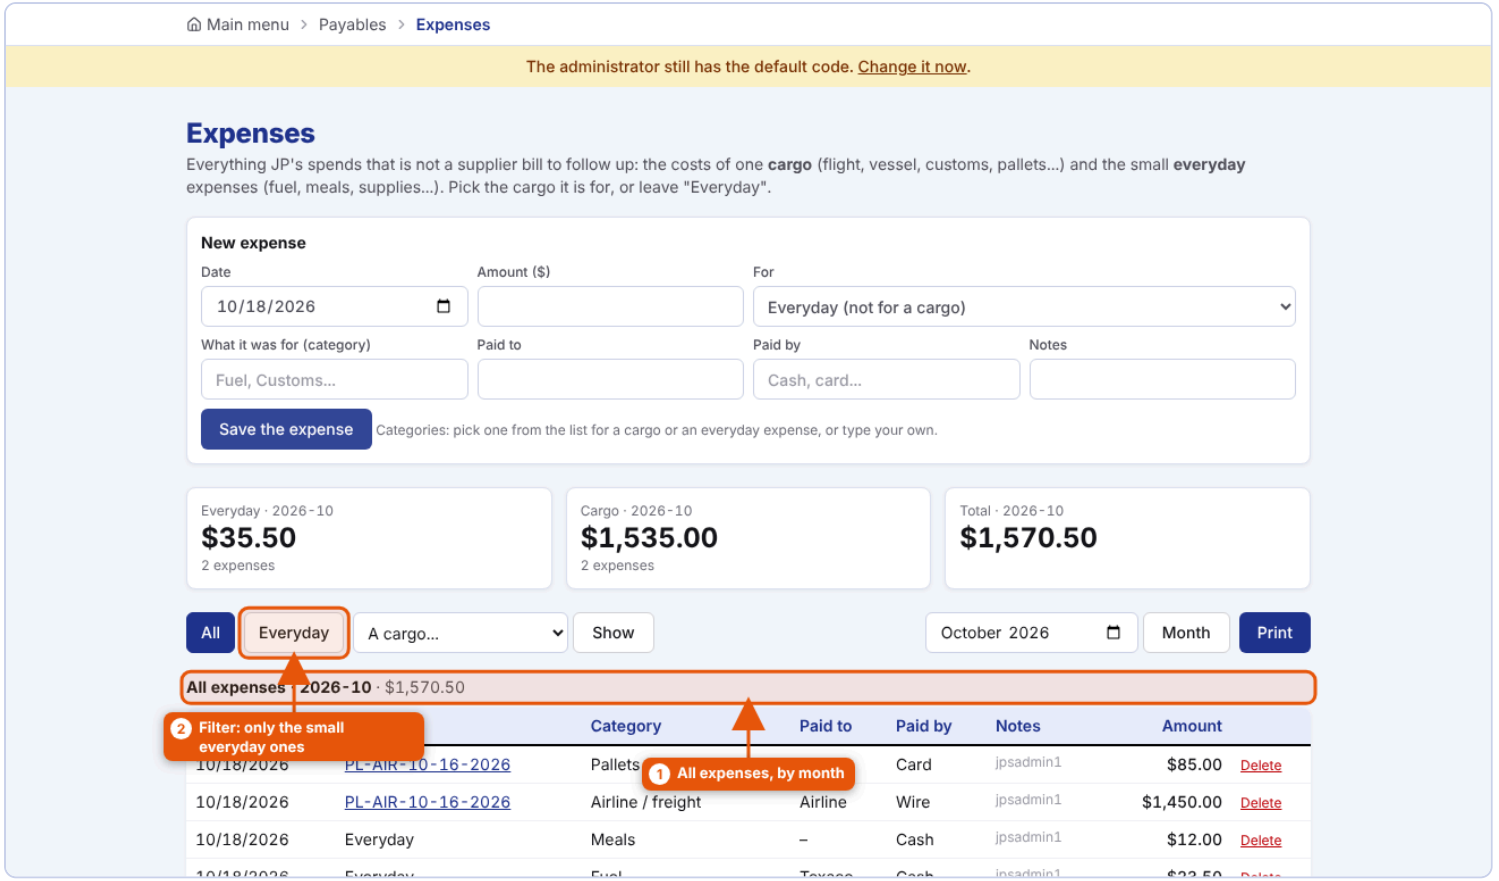

Why: One place to enter expenses: those for a cargo (shipment) and the small everyday ones.

Payables → Expenses. The "New expense" form: date, amount, what for (Everyday or a cargo), category, paid to, paid by, and notes. This is for expenses that are not supplier bills to follow up (fuel, meals, pallets, trucking...).

1. What for: Everyday or a cargo
2. Category (pick from the list or type your own)
3. Save the expense

F Expenses: by cargo and everyday

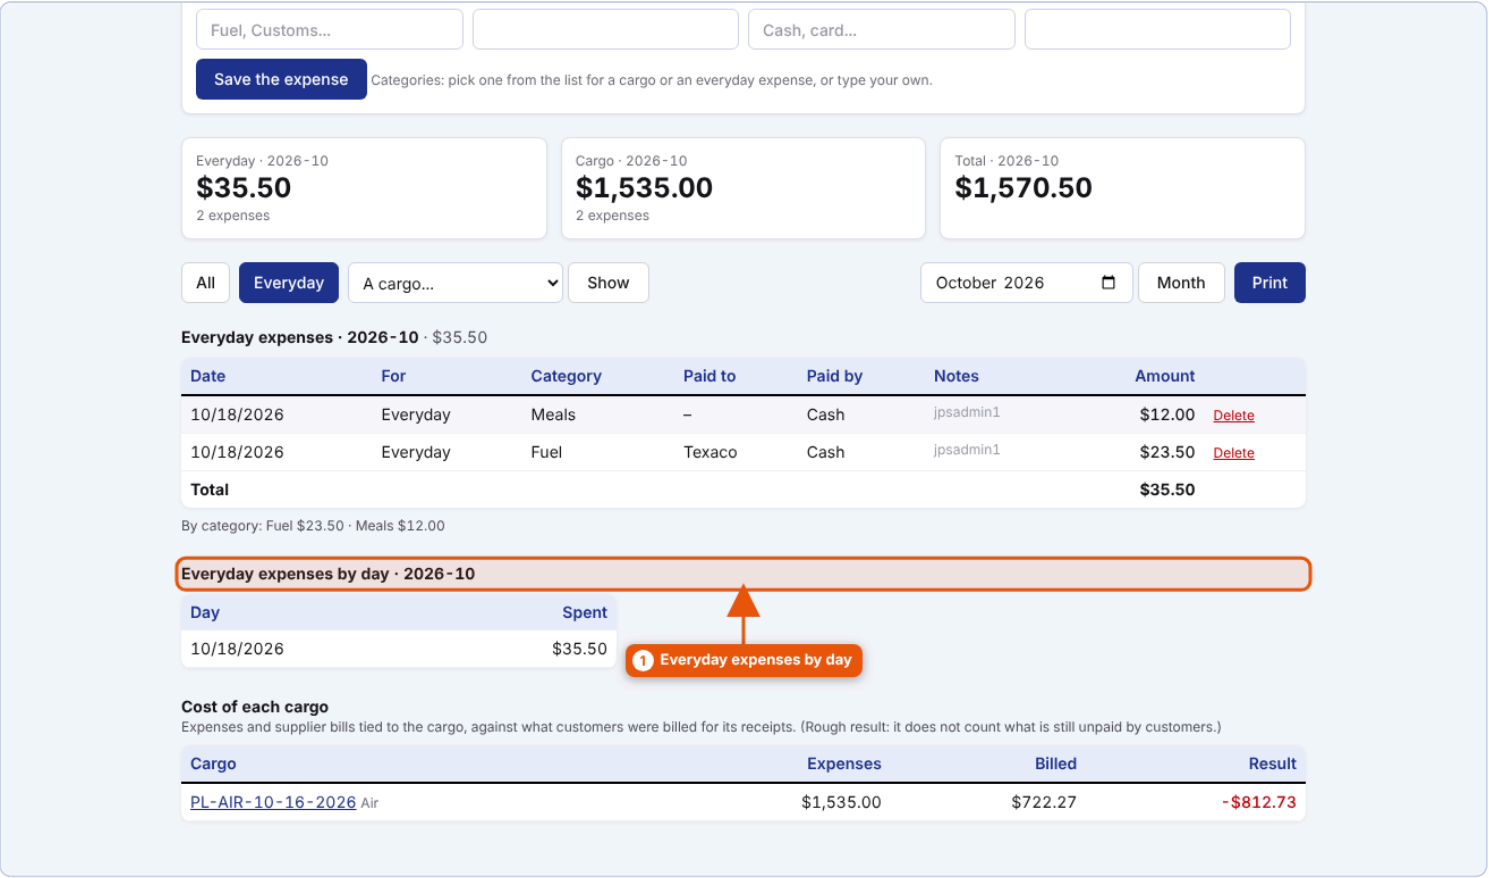

The list of expenses with its total, a summary by category, and the "Cost of each cargo" table: each cargo's expenses against what customers were billed, with a rough result. Filters: All, Everyday, one cargo, one month. The Print button prints the page.

1. All expenses, by month
2. Filter: only the small everyday ones

> **Tip:** The result does not count what customers have not paid yet.

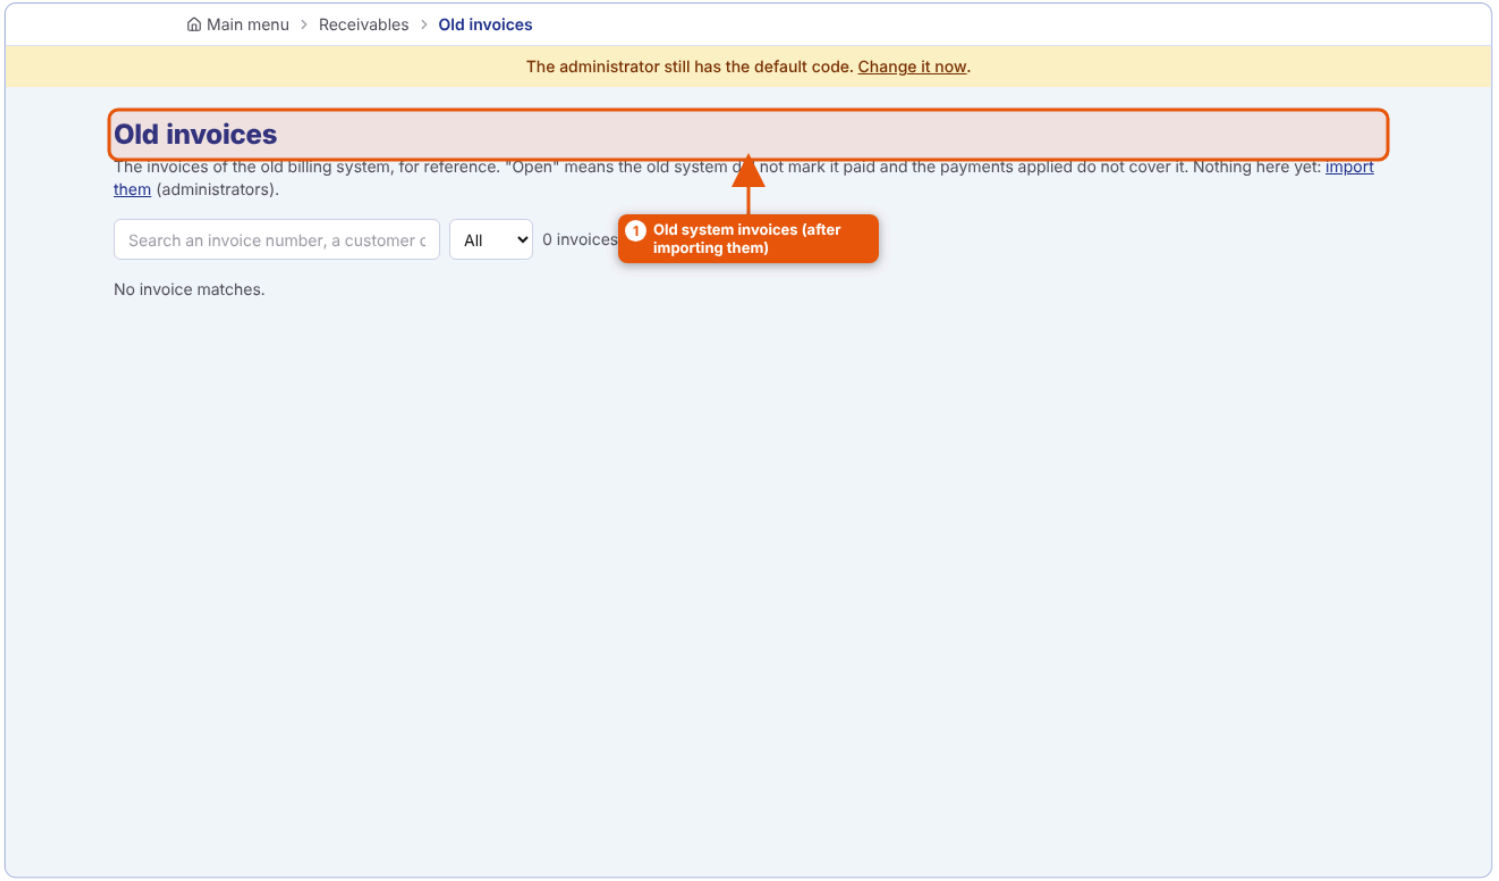

F Expenses: by cargo and everyday

The "Everyday" filter: only the small daily expenses, with a table of how much was spent each day of the month.

1. Everyday expenses by day

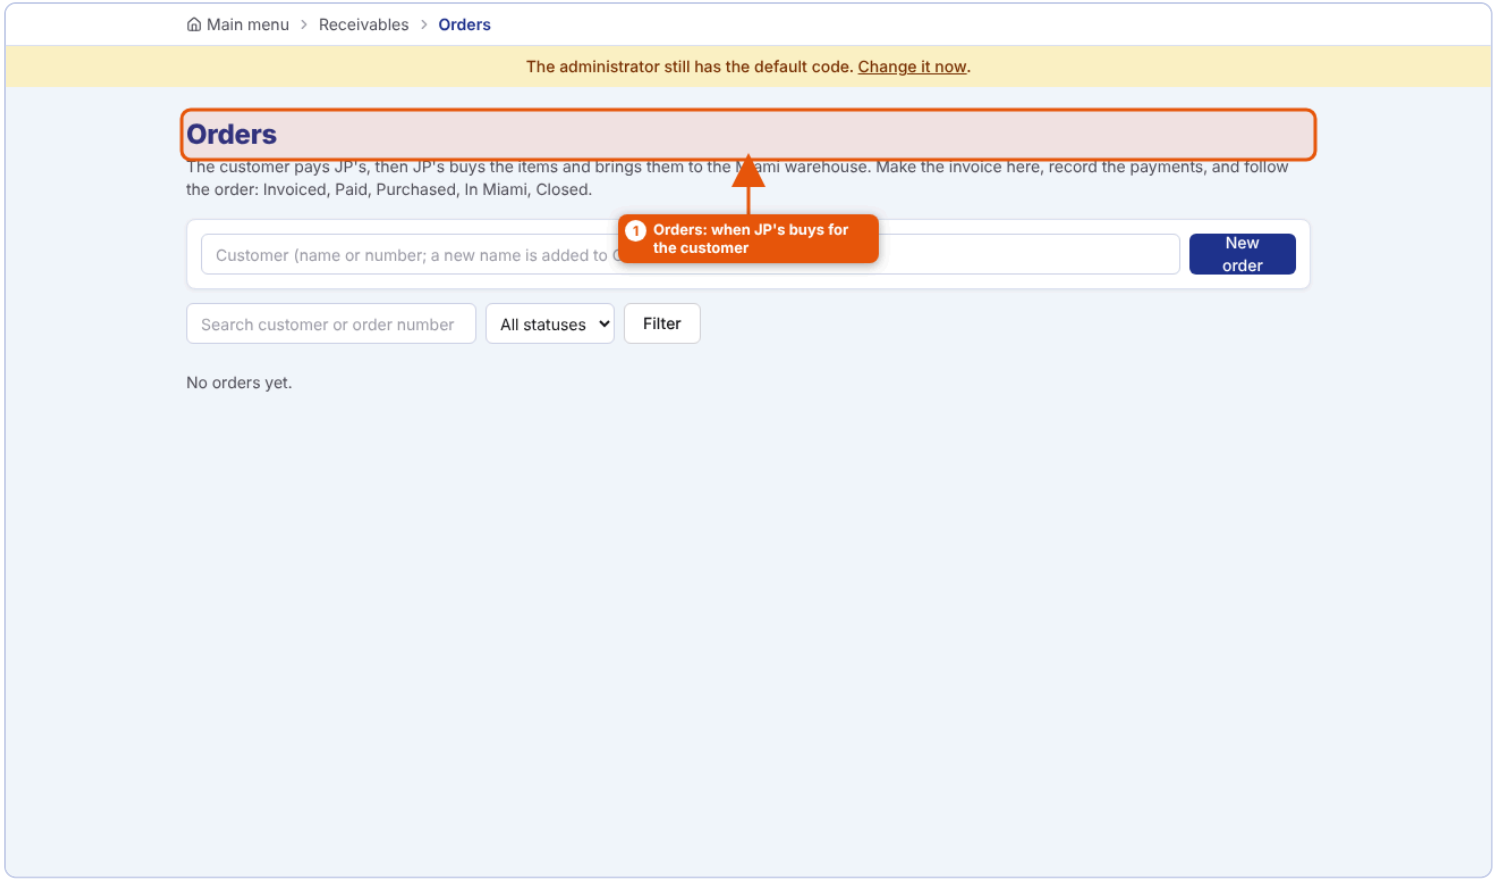

G Old invoices, orders and import

Old invoices: invoices from the old Access system (history and what is still owed).

1. Old system invoices (after importing them)

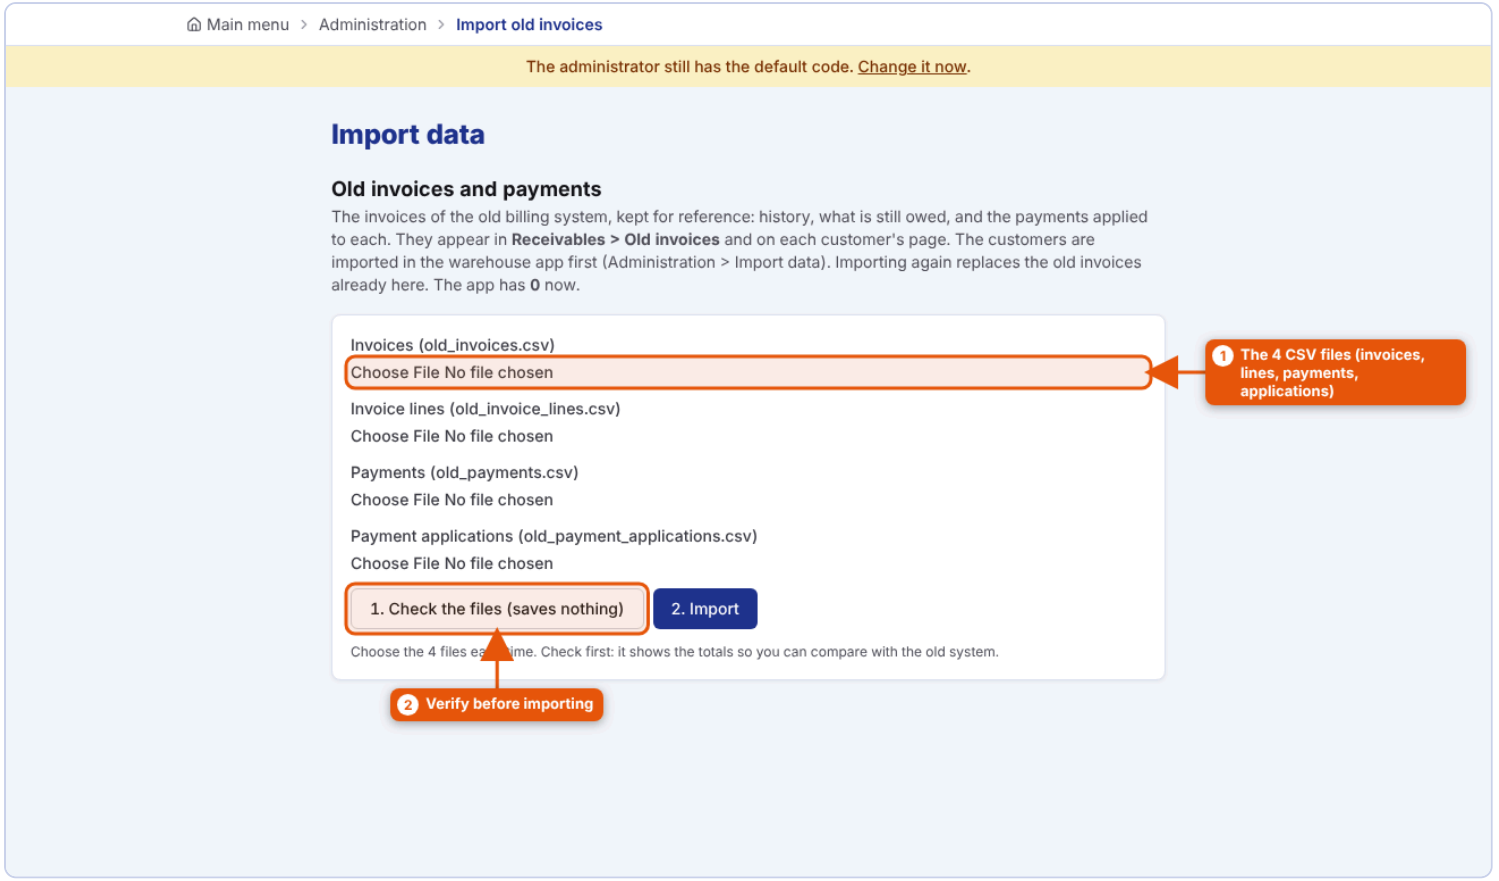

G Old invoices, orders and import

Orders: orders JP's buys for customers (purchase costs, payments, status).

1 Orders: when JP's buys for the customer

G Old invoices, orders and import

Administration → Import old invoices (administrator): 4 CSV files from the old system. Verify before importing. Import the customers first (in the main system).

1. The 4 CSV files (invoices, lines, payments, applications)
2. Verify before importing

H Automatic e-mails: when, what, who

The e-mails below go out by themselves, with no button. To send one again (for example after you change the receipt), there is a "Notify by e-mail" button on the receipt, Arrivals, the shipment and the invoice. Customers who have a website account receive a push + e-mail from the website; other customers receive the e-mail at the address on their record (if it is a real address, not a shared one).

When	What is sent	Sent by
You scan a package for a customer (Received items)	"Your package arrived at the Miami warehouse"	The website (push + e-mail) or the system (if no account)
A piece is saved (Consolidate) · the receipt changes	**The receipt as a PDF**, after ~2 minutes (several pieces = one e-mail)	The main system
You ship the shipment ("Ship this cargo")	"Your package is in transit"; PDF receipt if it has not gone out	The website / the system
All pieces of a receipt arrive in Arrivals PV	"Your package arrived in Haiti"	The website / the system
You mark "Ready for pickup"	"Your receipt is ready for pickup" with the office address	The website / the system
You make an invoice (Billing system)	**The invoice as a PDF**, a few seconds later	The Billing system
You send an estimate (Estimate, website request)	Air + Ocean prices	The website ("E-mail this estimate" button)

- Each e-mail is written in the customer's language (French, English, Spanish) and recorded in the history (Administration → Email customers). The PDF that was sent is saved: you can find it on the receipt / invoice.
- If an e-mail cannot go out (no e-mail, shared e-mail, network), the system records why; for invoices, it retries by itself.
- This requires the website to be connected (SUPABASE_URL, SITE_STAFF_EMAIL, SITE_STAFF_PASSWORD) and the admin-mail function to be up to date (redeploy it).

I How the system calculates the price

Each piece

- **Volume (Air)** = length × width × height (inches) ÷ **139** → pounds.
- **Cubic feet (Ocean)** = length × width × height ÷ **1728**.
- **Air:** billed on the **greater** of actual weight and volume.

Fees

- **Air:** billable pounds × **$4.50** (standard rate; a customer can have their own rate).
- **Ocean:** cubic feet × **$16** + **$45** handling (added automatically).
- **Insurance:** declared value up to $2,213 → **flat $50**; above that → **3.5%** (example $5,000 → $175).
- **Pickup** minimum $20 · **Repacking** minimum $10 · **Storage:** after 30 days, $10 per 30 days on receipts still in Miami (automatic; change it in Fees & rates).
- **Total** = shipping + other fees + insurance − credit (never negative).
- **Credit card (on the balance):** Square invoice 2.9% + $0.30; card present 2.6% + $0.10; manual 2.9% + $0.30 (estimated).

Example 1: Marie Joseph, Air (JPF-11018)

Piece 1: 24×18×16, 40 lb	volume 49.73 lb → billed 49.73
Piece 2: 30×20×20, 20 lb	volume 86.33 lb → billed 86.33
Total pounds: 136.06 × $4.50	**$612.27**
Pickup	$25.00
Handling (added by hand)	$35.00
Insurance ($800 value)	$50.00
Total	**$722.27**
Zelle payment	−$300.00
Balance	**$422.27**

Example 2: Roseline Pierre, Ocean (JPL-11019)

30×20×20 = 12,000 in³ ÷ 1728	6.94 cubic feet
6.94 × $16	$111.04
Ocean handling (automatic)	$45.00
Total	**$156.04**
She pays $200 → credit	$43.96

J Common problems and answers

- **Cannot make the invoice:** the receipt must have at least one piece (main system).
- **Payment larger than the balance:** on an invoice the system refuses; on the customer's "Enter payments" the rest becomes credit.
- **Cannot cancel an invoice:** if it has payments, void the payment first (Void).
- **The invoice did not go by e-mail:** read the message under the buttons ("Not e-mailed: ..."). The system tries again up to 4 times; then click "Notify by e-mail".
- **Billing does not show a change:** wait 5 seconds and refresh the page.
- **Cannot sign in:** the person needs "Billing system" access (administrator).
- **Expense on the wrong cargo:** delete it and enter it again (Expenses → Delete).
- **Wrong figures:** check the rate on the receipt (main system, Receipt details) and the destination.
