Warehouse, receipts, shipments, Arrivals PV and payments

For the people who work in the warehouse and the office

Version October 19, 2026 · The examples use simulated customers (Marie Joseph #1001, Roseline Pierre #1002): the figures are real, calculated by the system.

V How the system calculates the price

W Common problems and answers

A Overview: the daily work

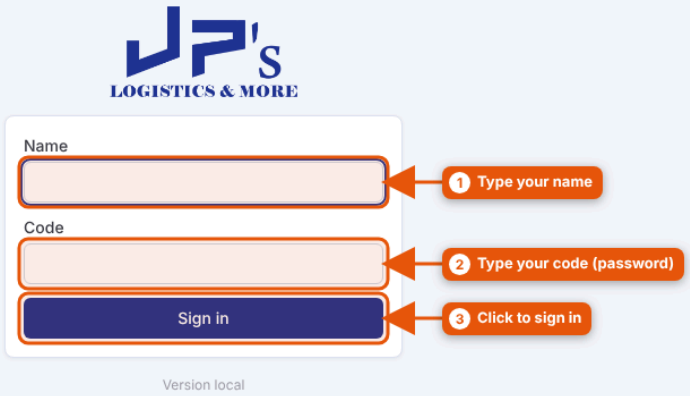

Every day

1. **Received items**: scan every parcel that arrives; choose the customer if you know them. The "parcel arrived" e-mail goes by itself.
2. **Consolidate**: make the JP's pieces (contents, size, weight) and print the labels. The receipt is e-mailed by itself.
3. **Pickups**: schedule and print the driver sheet.
4. **Estimate**: give customers the price before they ship.
5. **Pre-alerts**: look at what customers announced on the website.

For every departure (Air on Friday, Ocean on Wednesday)

1. Create the shipment, load the pallets (Load pallet).
2. Fill in the Booking, print the BOL, SLI, Cargo list.
3. **Ship this cargo**: customers get "in transit".
4. When the cargo reaches PV: **Arrivals PV** (scan), then **Ready for pickup**.
5. Payments (Receive payment) and invoices are Billing's work.

B Sign in and the menu

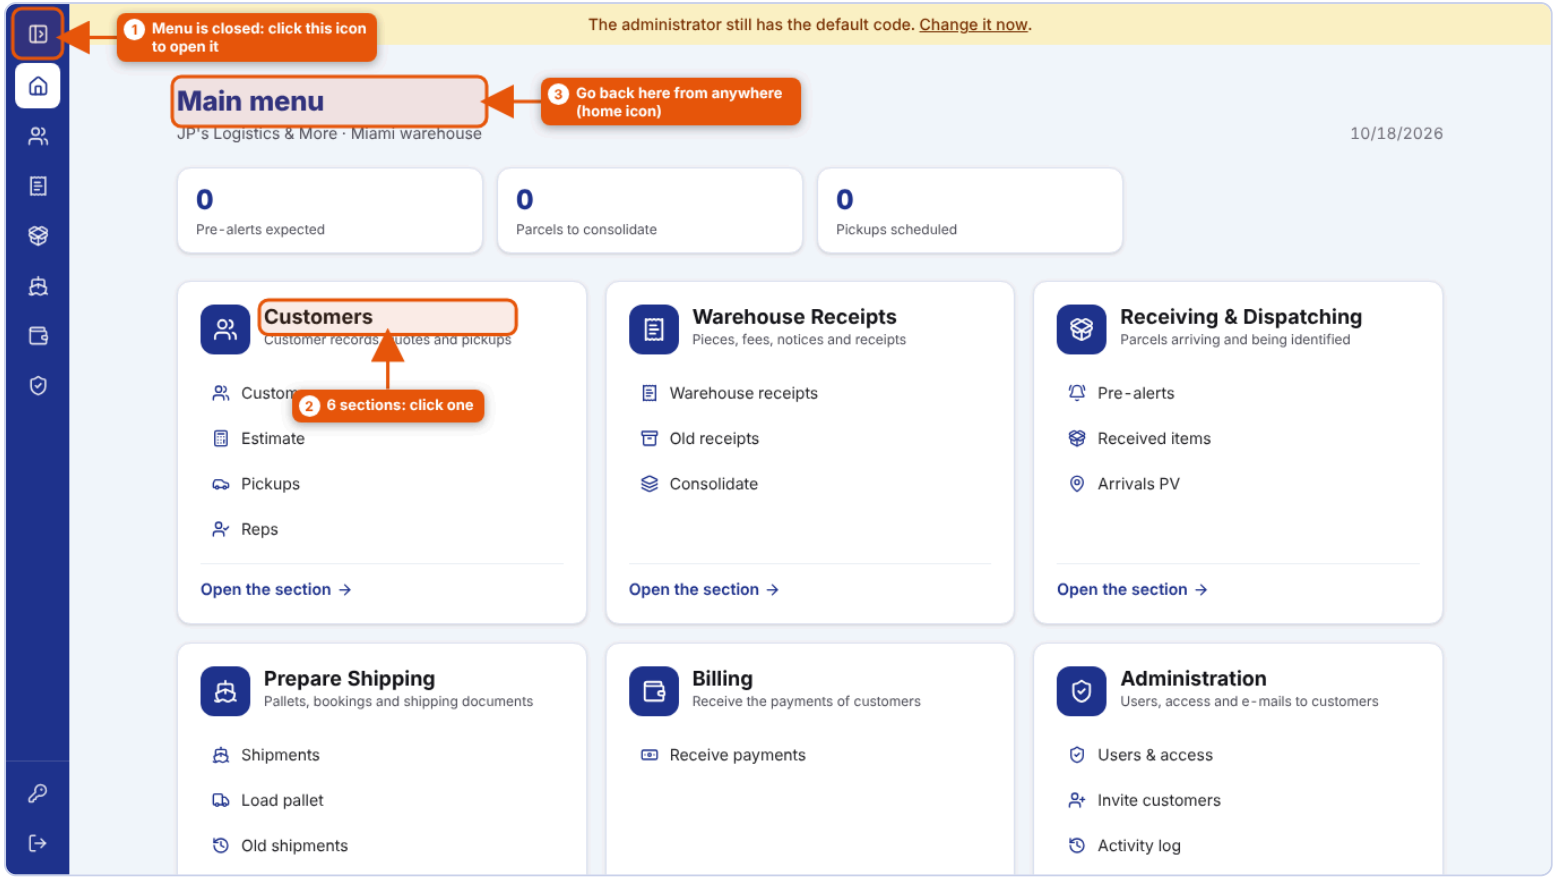

Why: Everyone signs in with a name and a code. The left menu starts closed.

The sign-in page. Enter your name and your code (you get them from the administrator), then click Sign in. If you enter the code wrong 5 times, the name is locked for 10 minutes.

1. Type your name
2. Type your code (password)
3. Click to sign in

Tip: Do not share your code. Change it in "My account" (Step B).

B Sign in and the menu

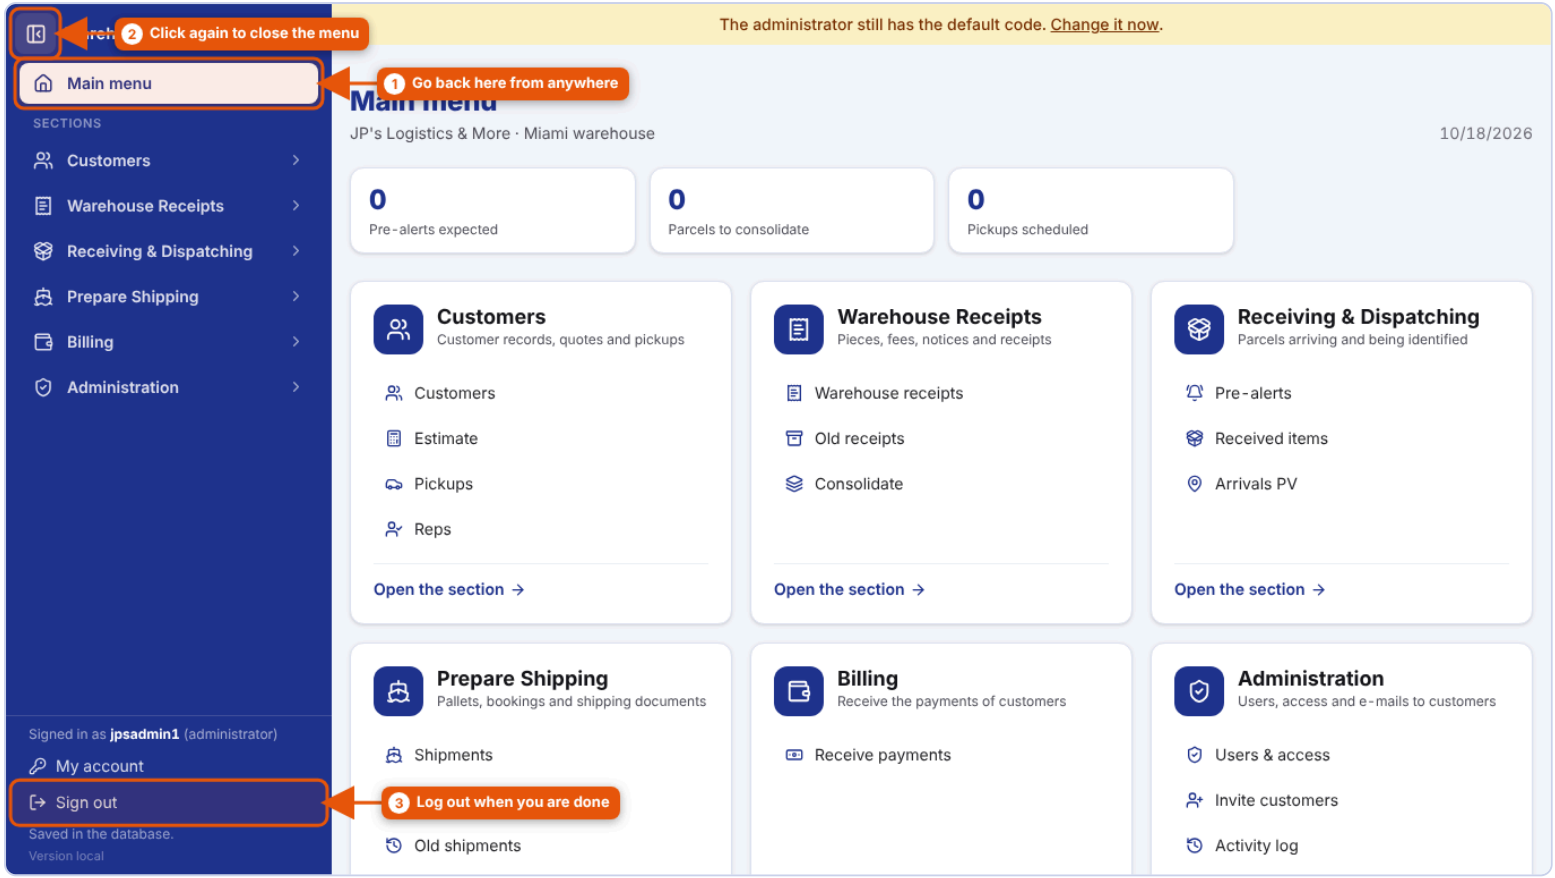

The Main menu. When the platform starts, the left menu is CLOSED: it stays closed until you open it with the small icon in the top-left corner. There are 6 sections: Customers, Warehouse Receipts, Receiving & Dispatching, Prepare Shipping, Billing and Administration. You only see the sections you are allowed to use. The numbers at the top show what is waiting.

1. Menu is closed: click this icon to open it
2. 6 sections: click one
3. Go back here from anywhere (home icon)

Tip: The closed menu is a thin column of icons: hover over an icon to see its name.

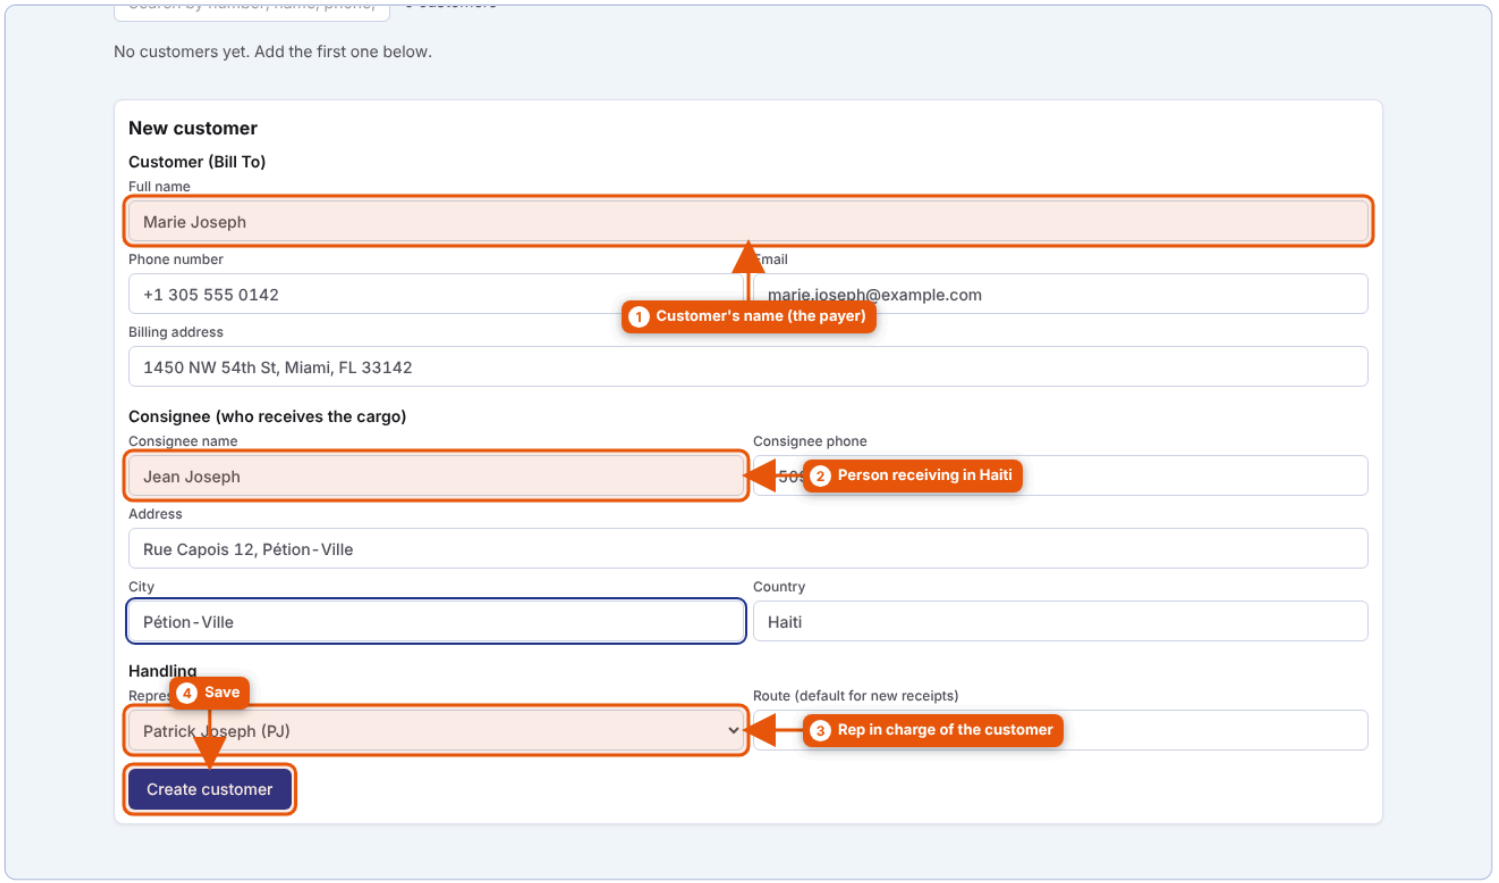

B Sign in and the menu

The menu open: all sections with their names. "Main menu" takes you back here from anywhere. Click the icon at the top again to close it. Your choice is remembered during the session.

1. Go back here from anywhere
2. Click again to close the menu
3. Log out when you are done

Customers

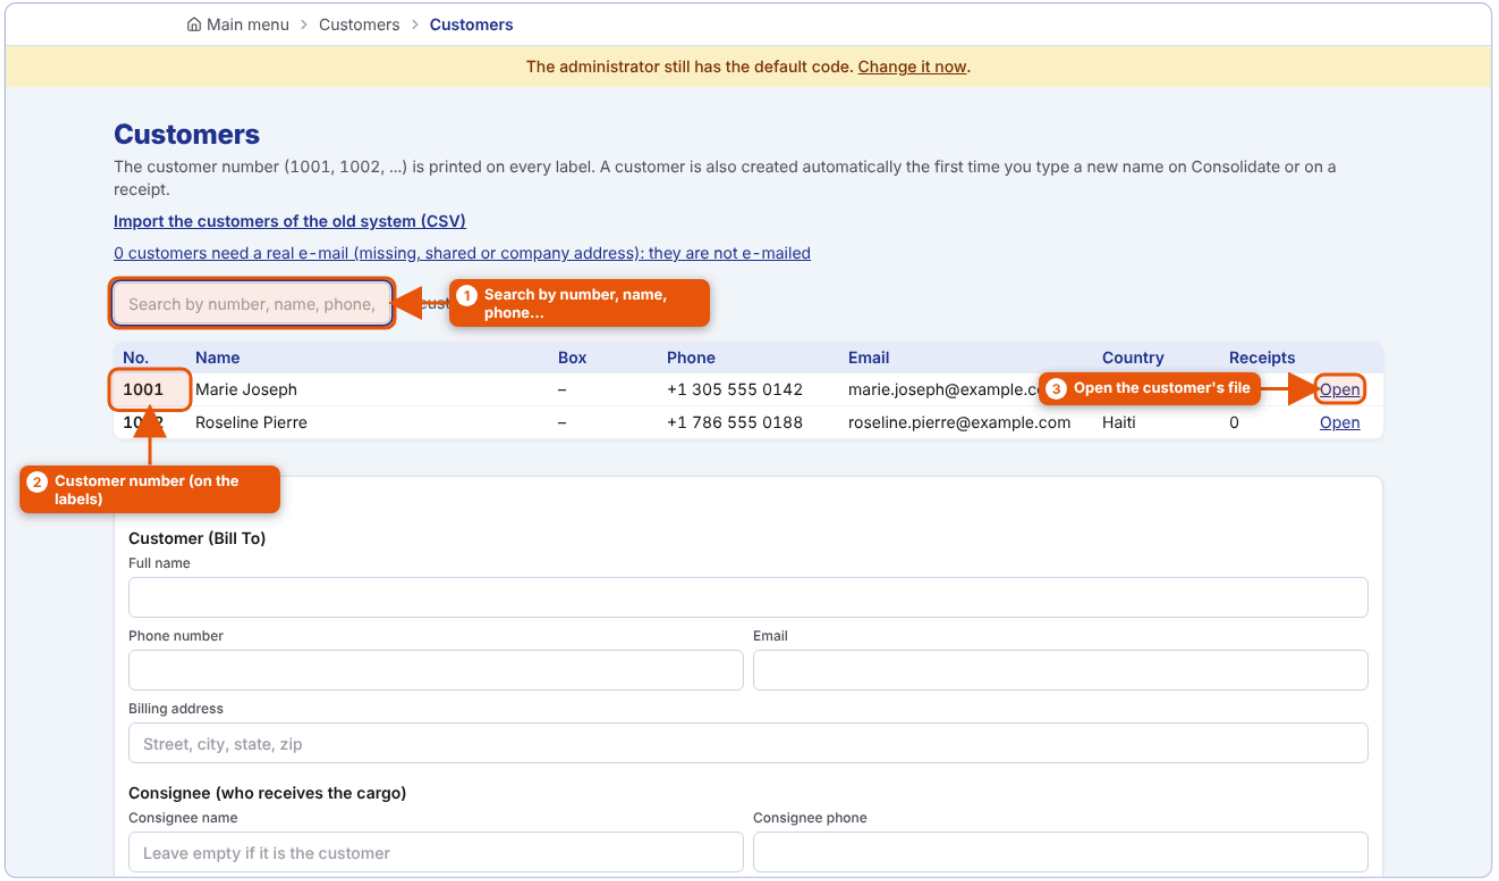

Why: Every customer has a number (1001, 1002…) printed on every label.

Customers → "New customer" form. Fill in: the person paying (Bill To), the person receiving the cargo in Haiti (Consignee), and the representative. Only the name is required; you can complete the rest later.

1. Customer's name (the payer)
2. Person receiving in Haiti
3. Rep in charge of the customer
4. Save

Tip: Entering a new name on Consolidate or on a receipt also creates the customer.

Customers

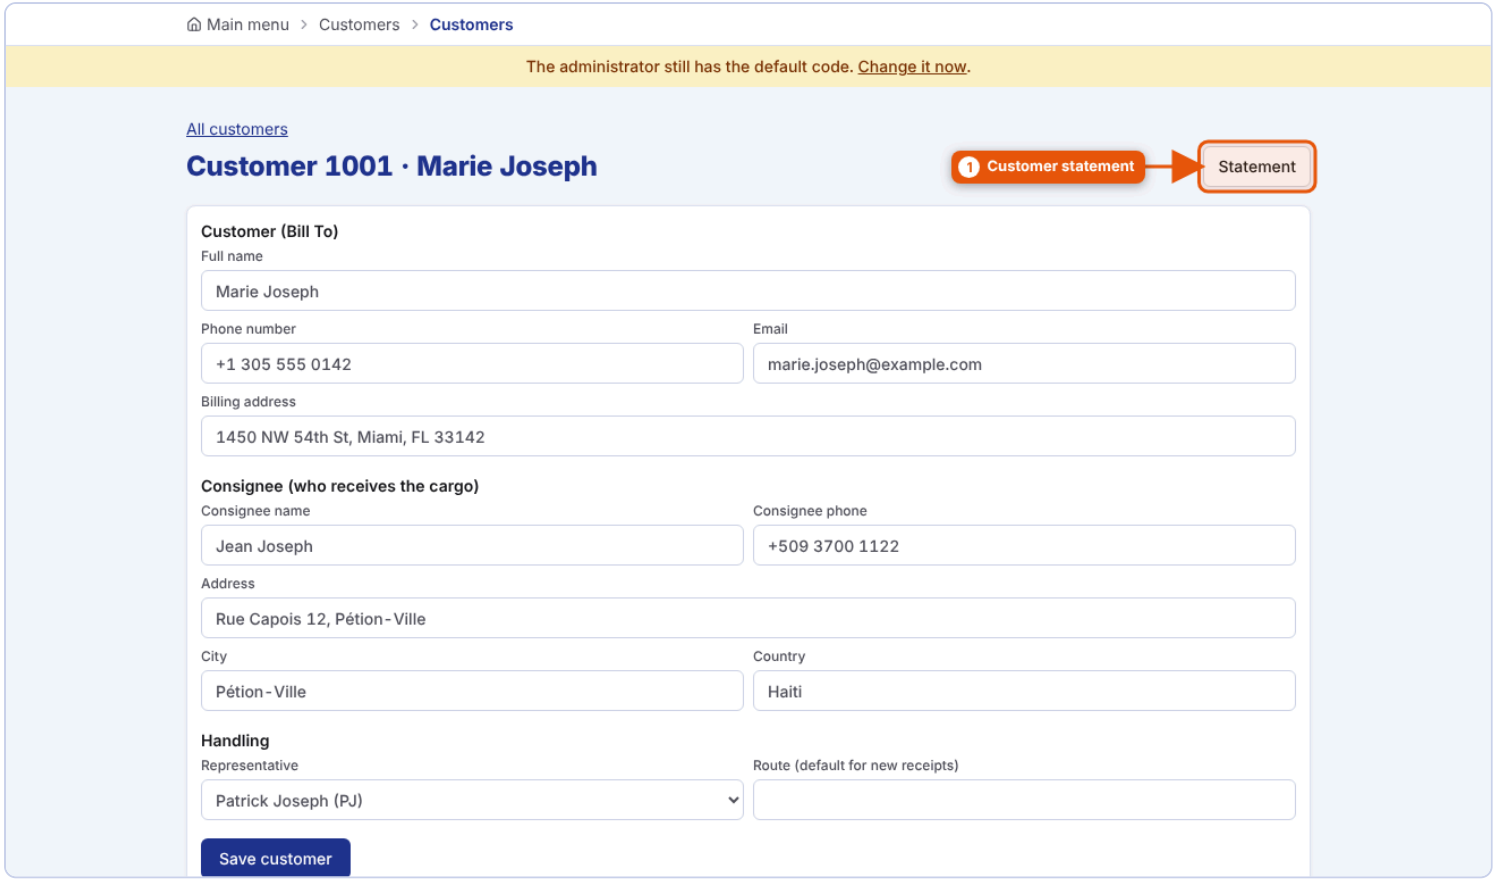

The customer list (7 per page). Search by number, name, phone, e-mail or box. "Open" opens the customer's record.

1. Search by number, name, phone...
2. Customer number (on the labels)
3. Open the customer's file

> **Tip:** Customers with a shared e-mail or a company account do not receive automatic e-mails ("need a real e-mail" link).

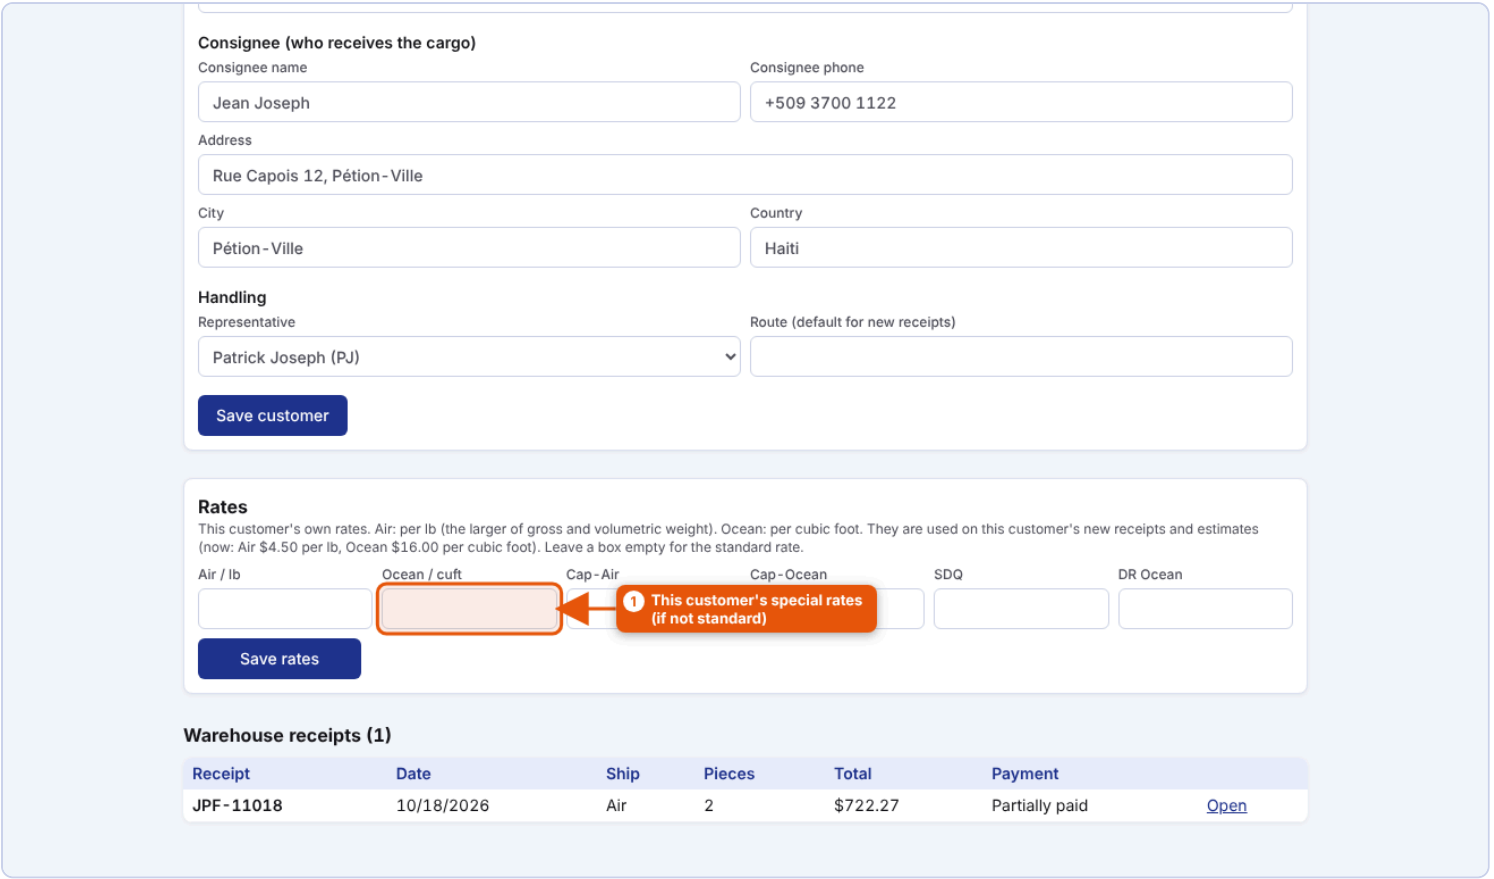

Customers

The customer's record: all their information, their receipts and the Statement button.

1. Customer statement

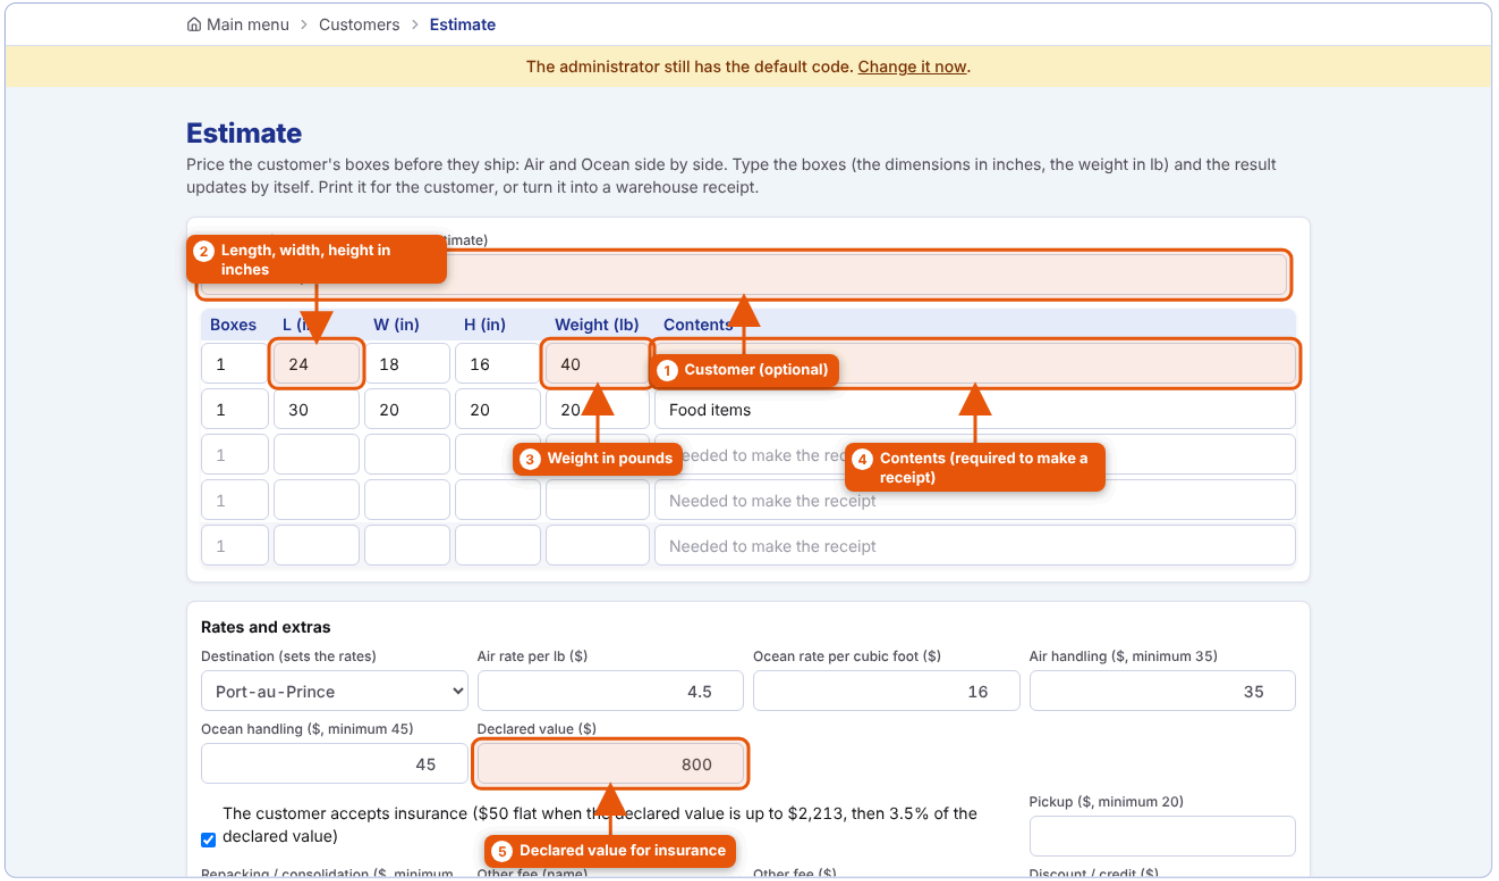

Customers

Special rates. If a customer has their own rates (per pound by Air, per cubic foot by Ocean…), enter them here: they will be applied to every new receipt. If you leave it blank, the standard rates apply ($4.50 / $16).

1. This customer's special rates (if not standard)

D Price estimates

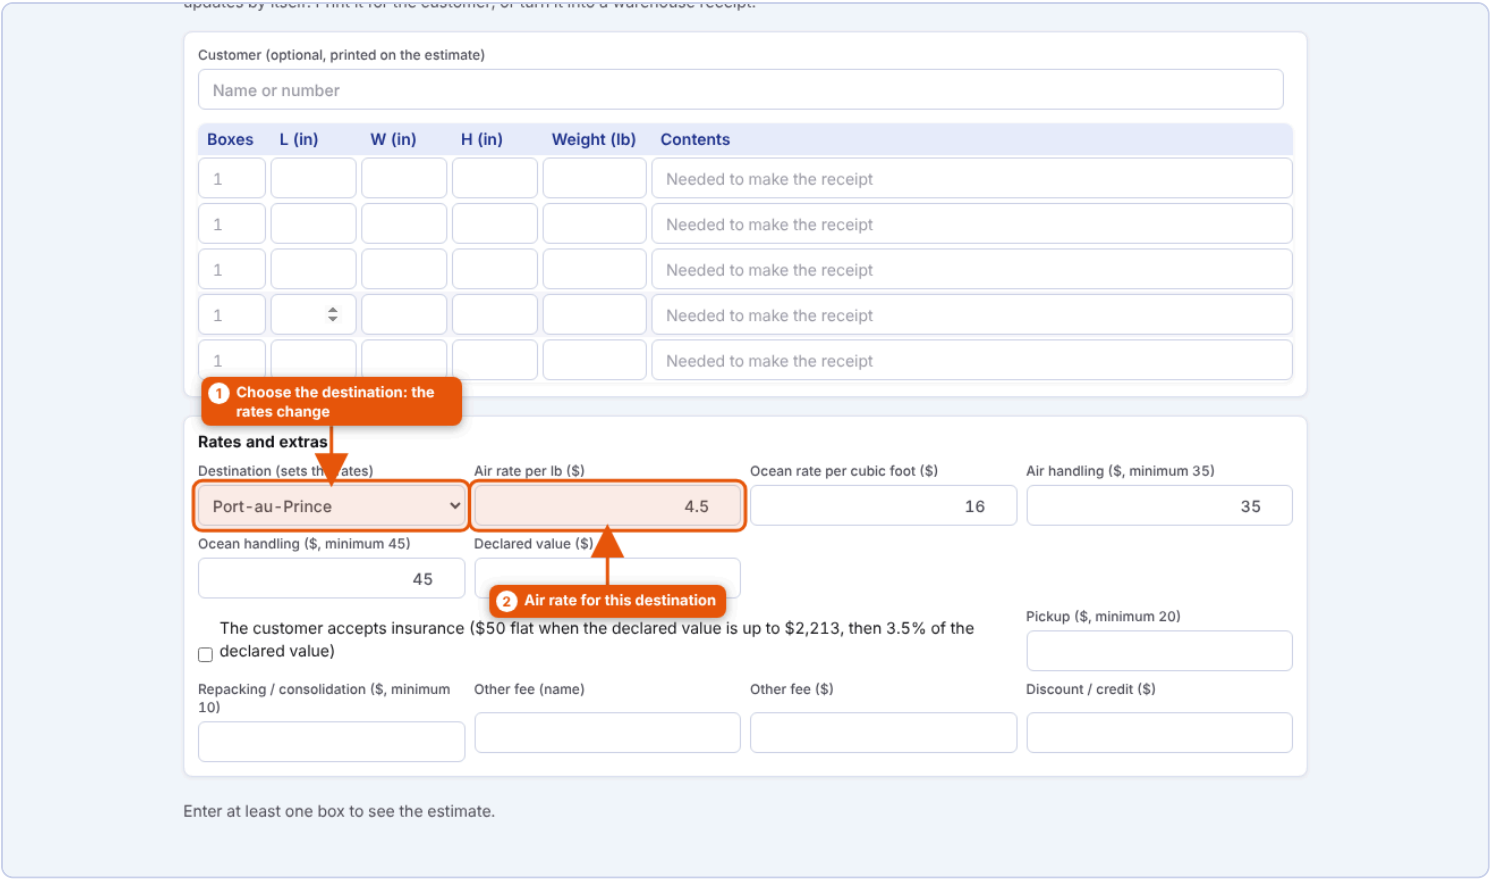

Why: Before the customer ships, you can give them the price: Air and Ocean side by side.

Customers → Estimate. Enter the boxes: quantity, length × width × height in inches, weight in pounds and contents. The result updates by itself. Also enter the declared value if the customer wants insurance.

1. Customer (optional)
2. Length, width, height in inches
3. Weight in pounds
4. Contents (required to make a receipt)
5. Declared value for insurance

Tip: Dimensions are in INCHES, weight in POUNDS (lb).

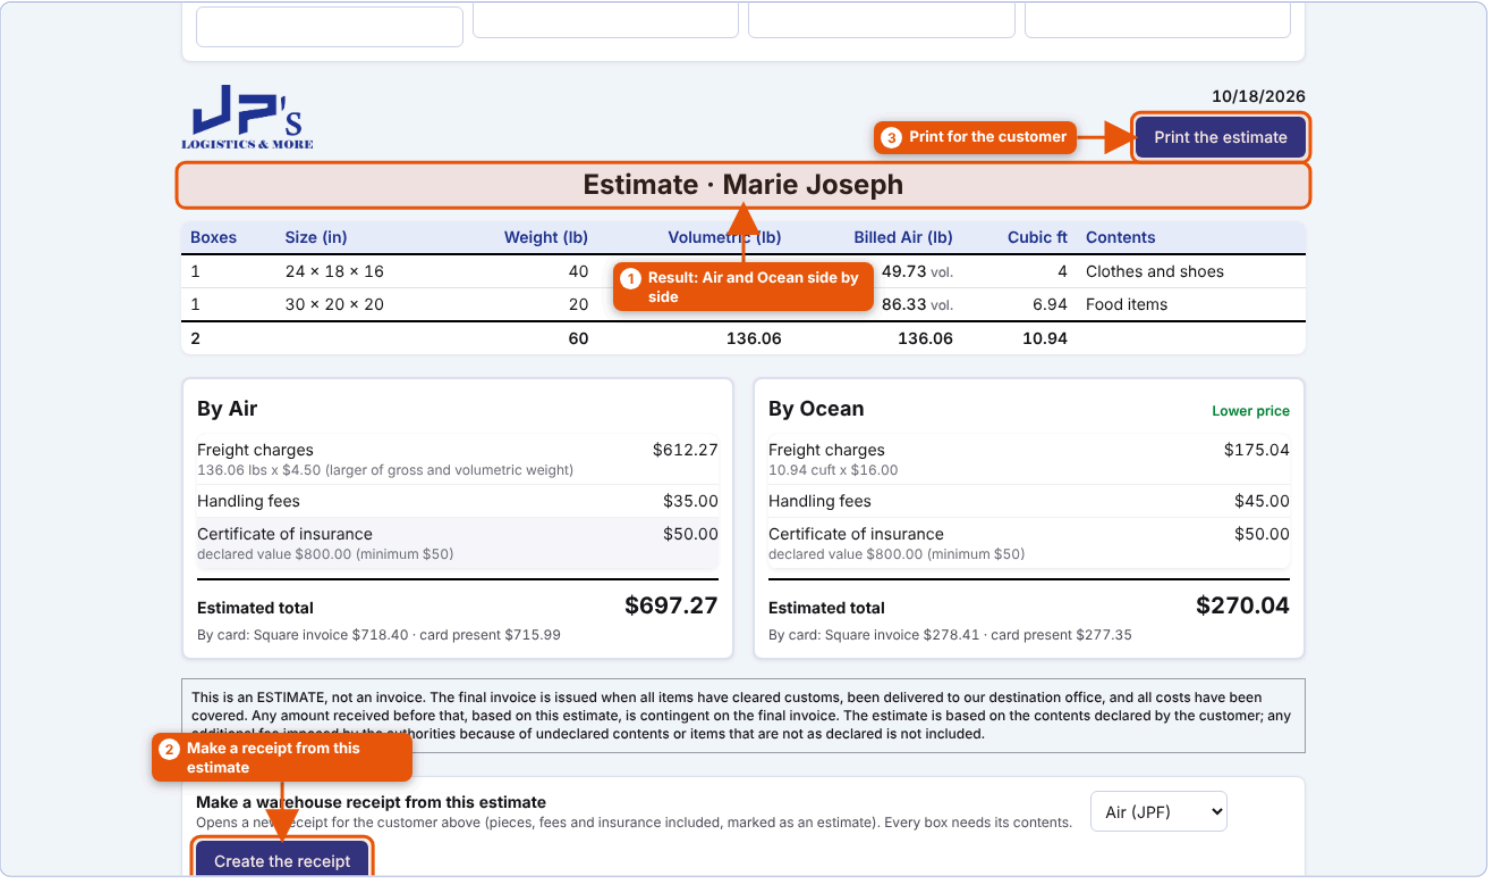

D Price estimates

The estimate also has a "Destination" field: when you change it, the Air and Ocean rates change to that destination's rates.

1. Choose the destination: the rates change
2. Air rate for this destination

D Price estimates

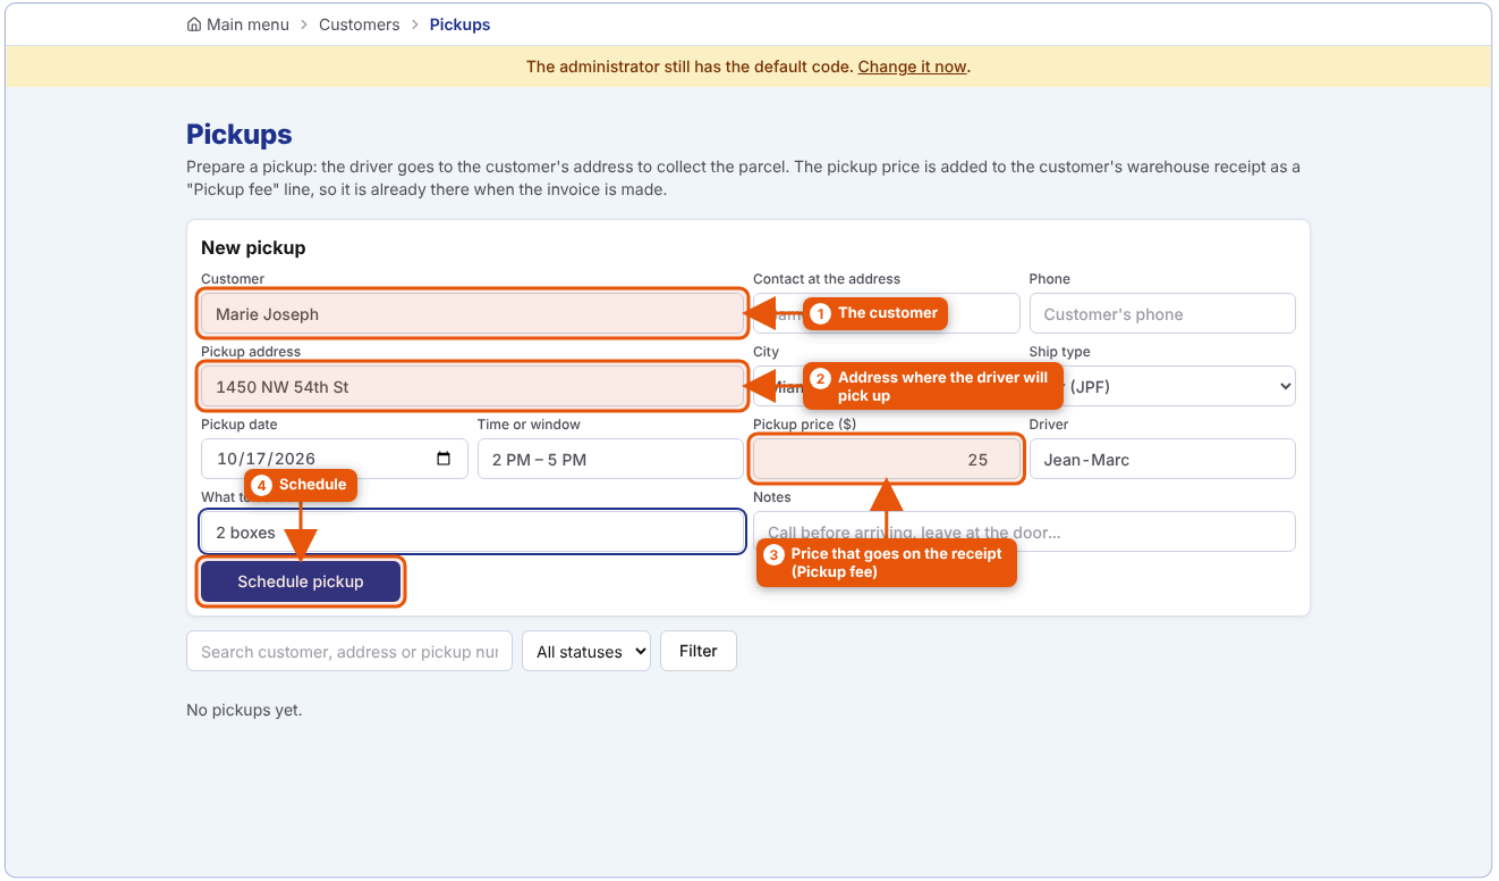

Result: the "By Air" and "By Ocean" columns with the total for each. "Lower price" marks the cheaper option. "Print the estimate" prints it for the customer. "Create the receipt" turns the estimate into a receipt (each box needs its contents).

1. Result: Air and Ocean side by side
2. Make a receipt from this estimate
3. Print for the customer

> **Tip:** An estimate is not an invoice. The printed note says so.

E Pickup (collecting from the customer)

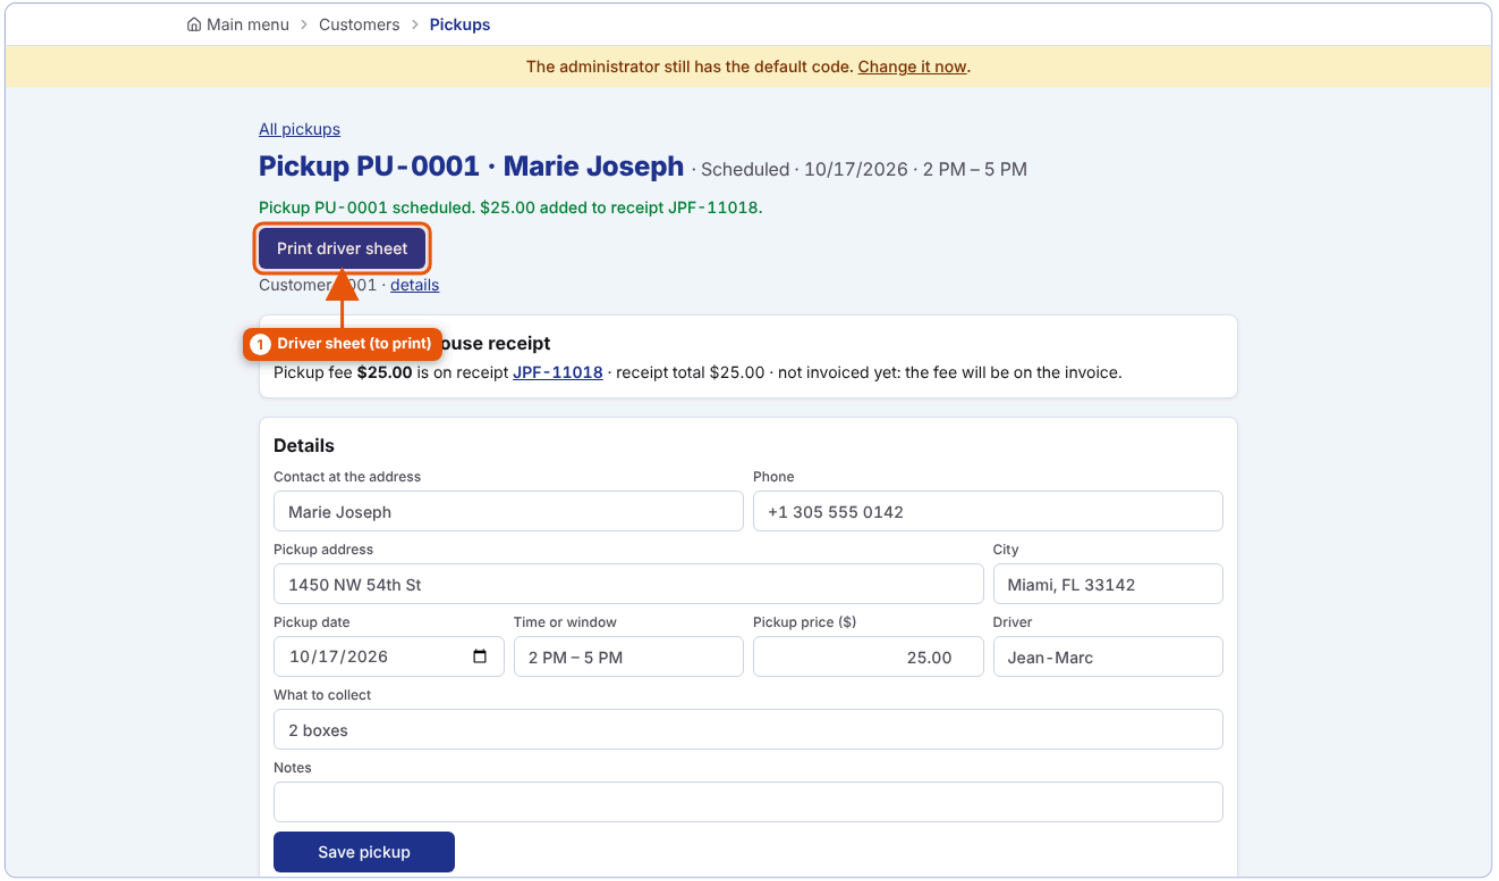

Why: The driver collects the parcels at the customer's home. The pickup fee goes on the customer's receipt.

Customers → Pickups. Choose the customer, address, date and time, driver and price. Click "Schedule pickup".

1. The customer
2. Address where the driver will pick up
3. Price that goes on the receipt (Pickup fee)
4. Schedule

E Pickup (collecting from the customer)

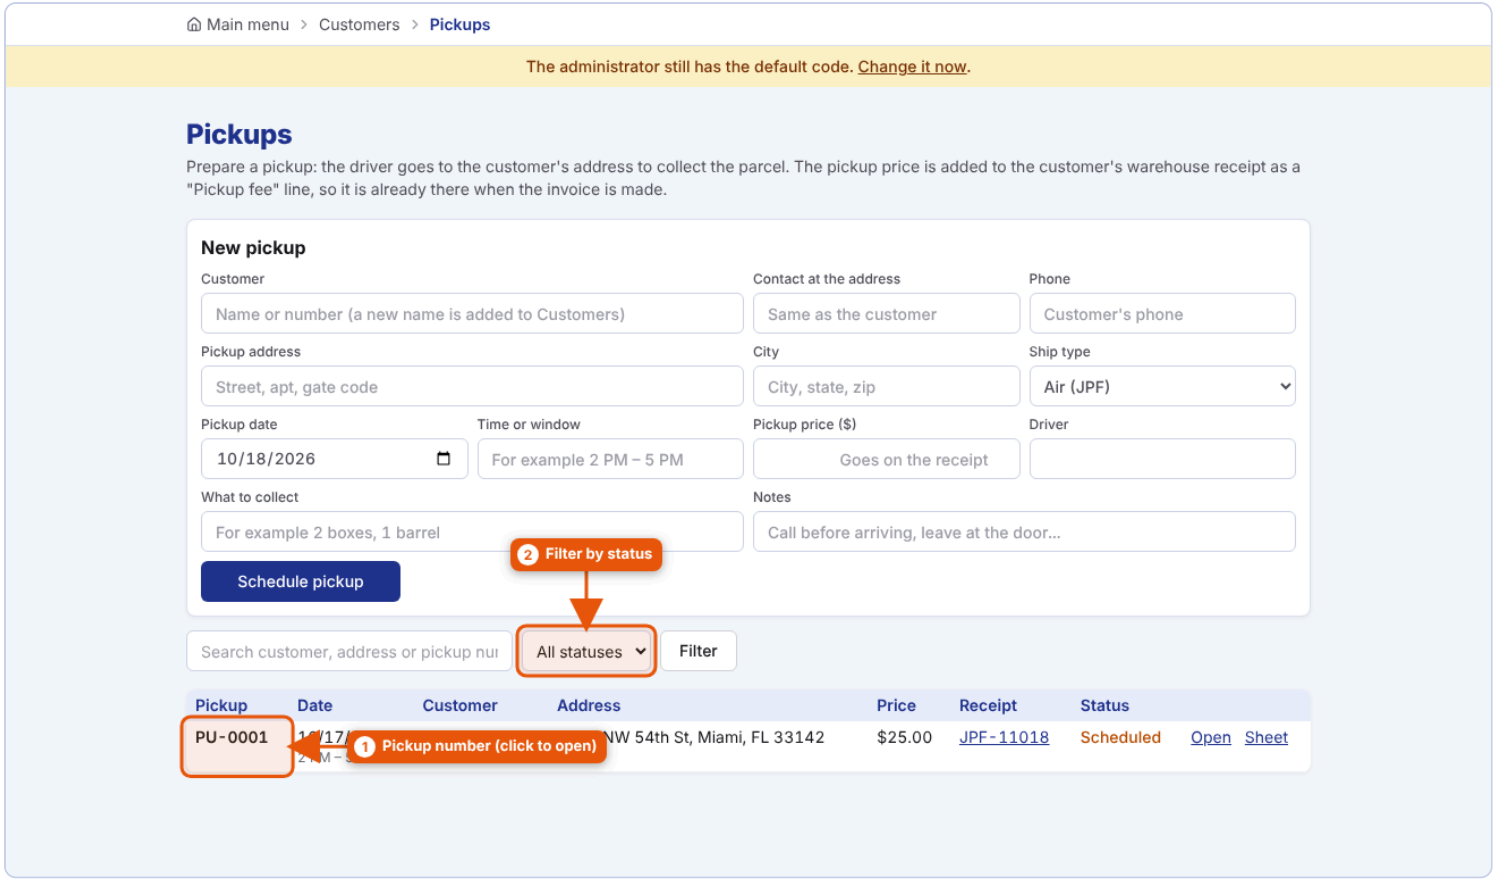

Pickup details. The price is added to the customer's receipt (JPF-...). "Print driver sheet" prints the driver's sheet.

1. Driver sheet (to print)

> **Tip:** If you cancel the pickup, the fee is removed from the receipt.

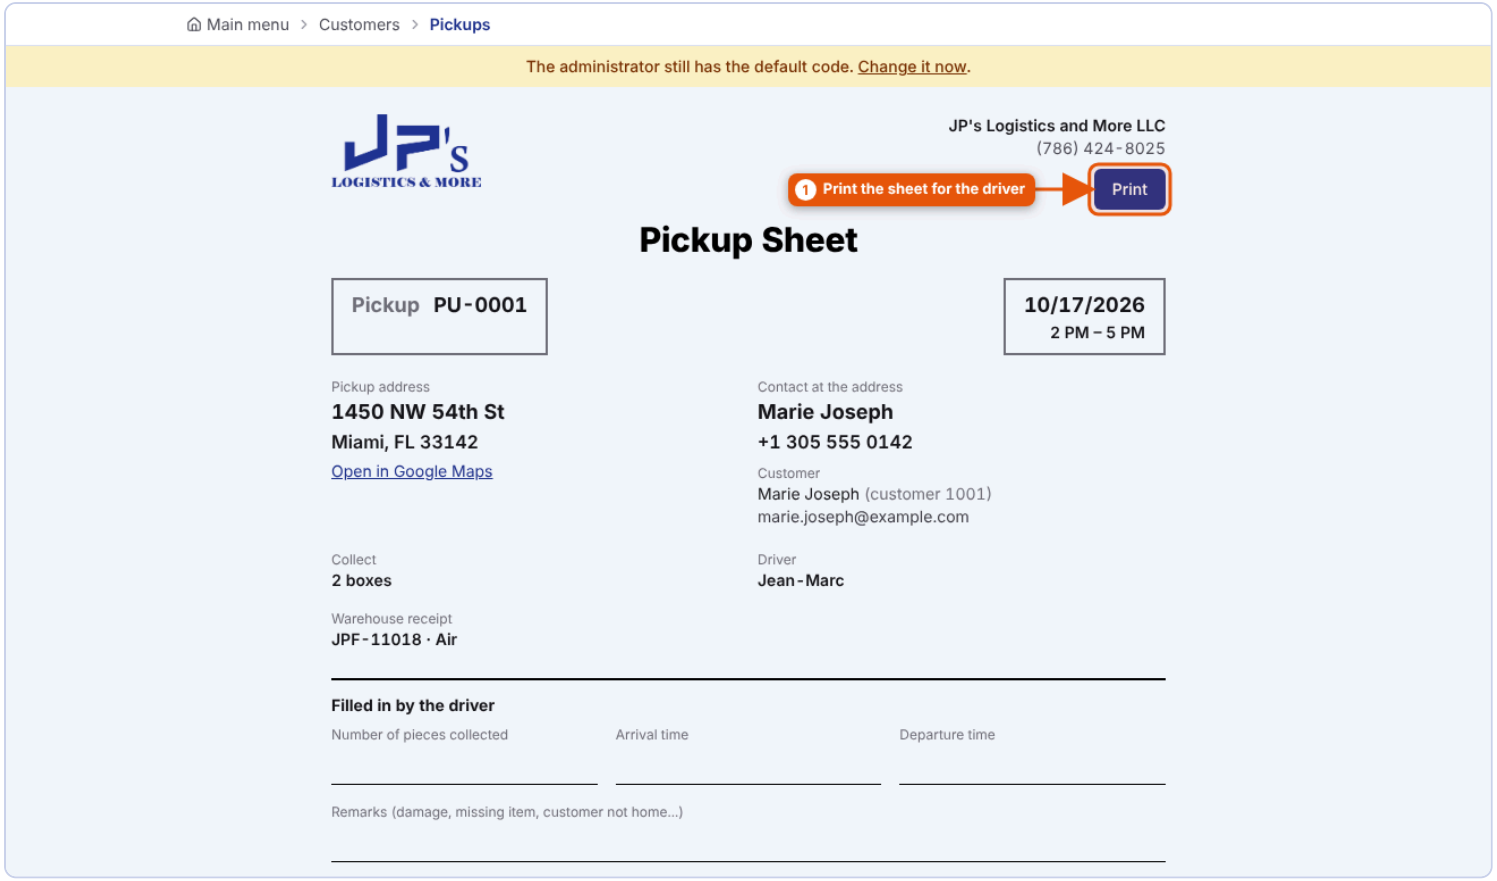

E Pickup (collecting from the customer)

The pickup list with filters by status (Scheduled, Picked up, Cancelled).

1. Pickup number (click to open)
2. Filter by status

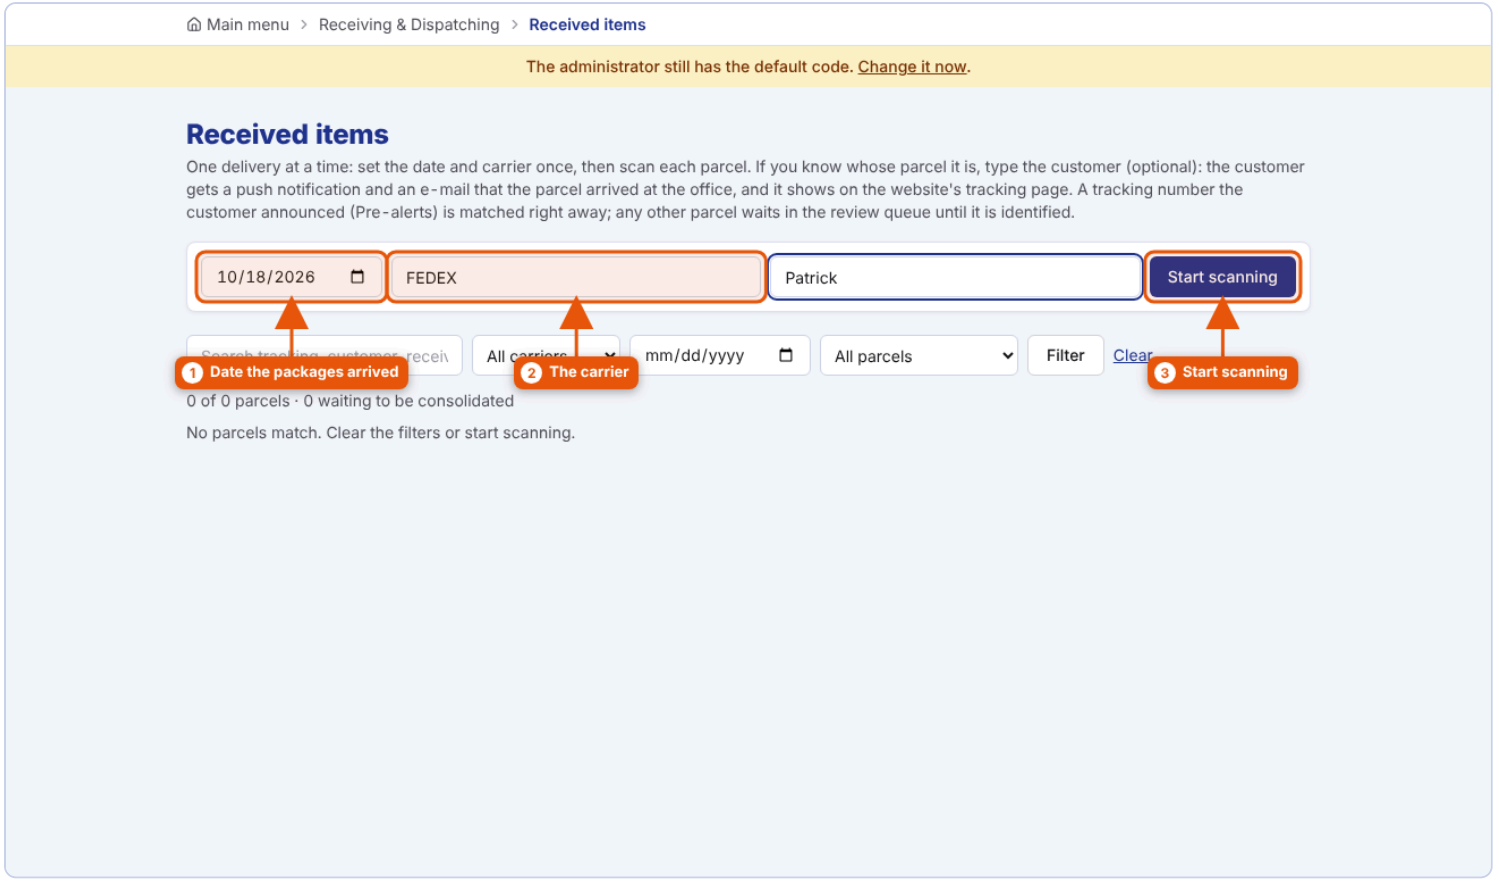

E Pickup (collecting from the customer)

The driver sheet (for printing): address, phone, what to collect, notes.

1. Print the sheet for the driver

F Receiving parcels (Received items)

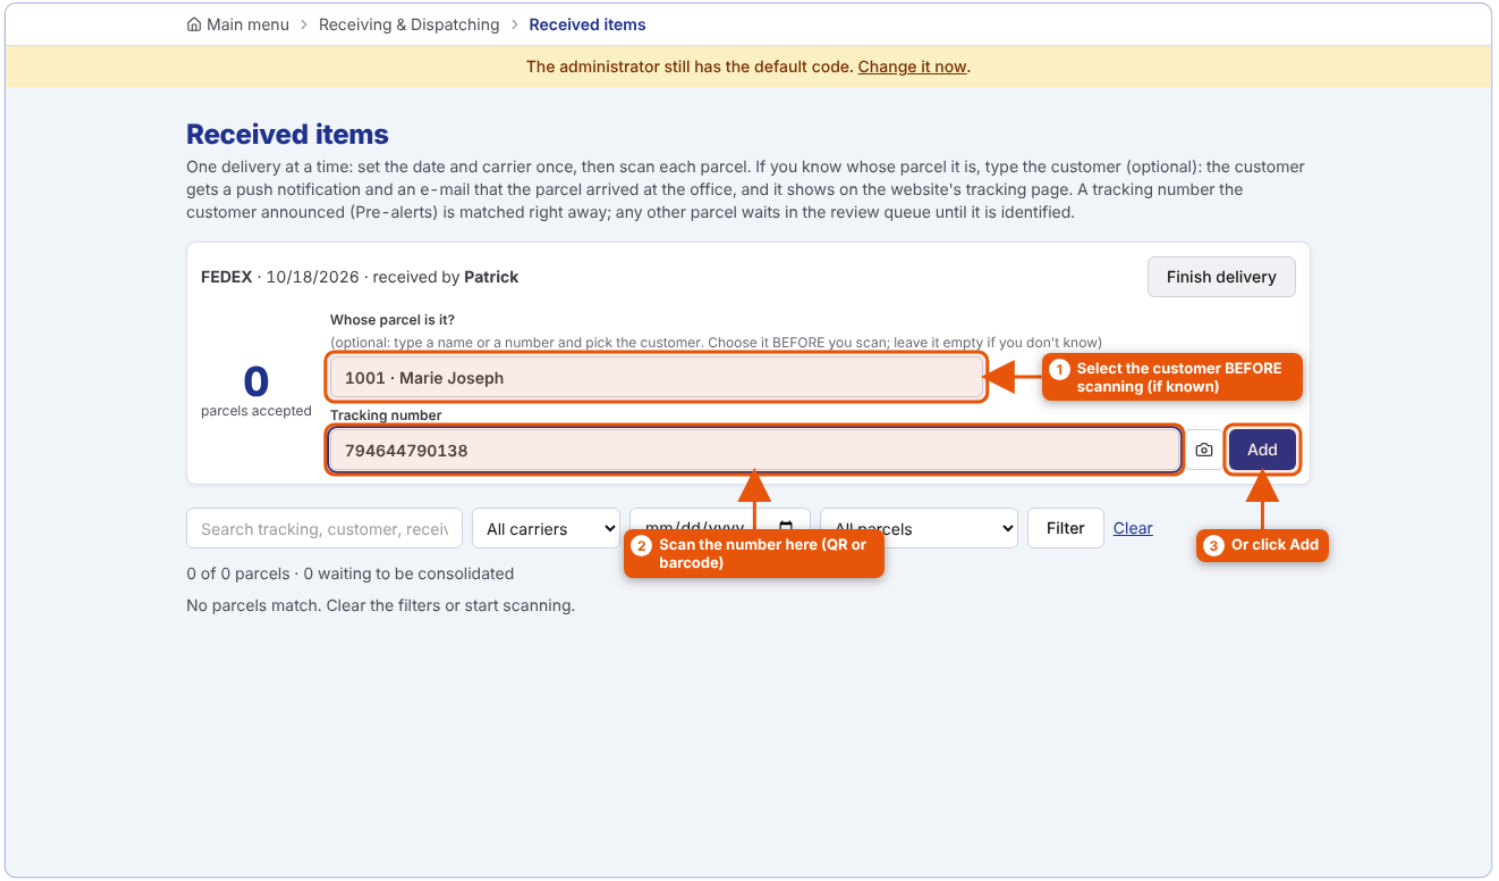

Why: Every parcel that arrives at the Miami warehouse is scanned here. If you choose the customer, they get an e-mail by themselves.

Receiving & Dispatching → Received items. Start a delivery: date, carrier (FEDEX, UPS, AMAZON...) and the person receiving. Click "Start scanning".

1. Date the packages arrived
2. The carrier
3. Start scanning

F Receiving parcels (Received items)

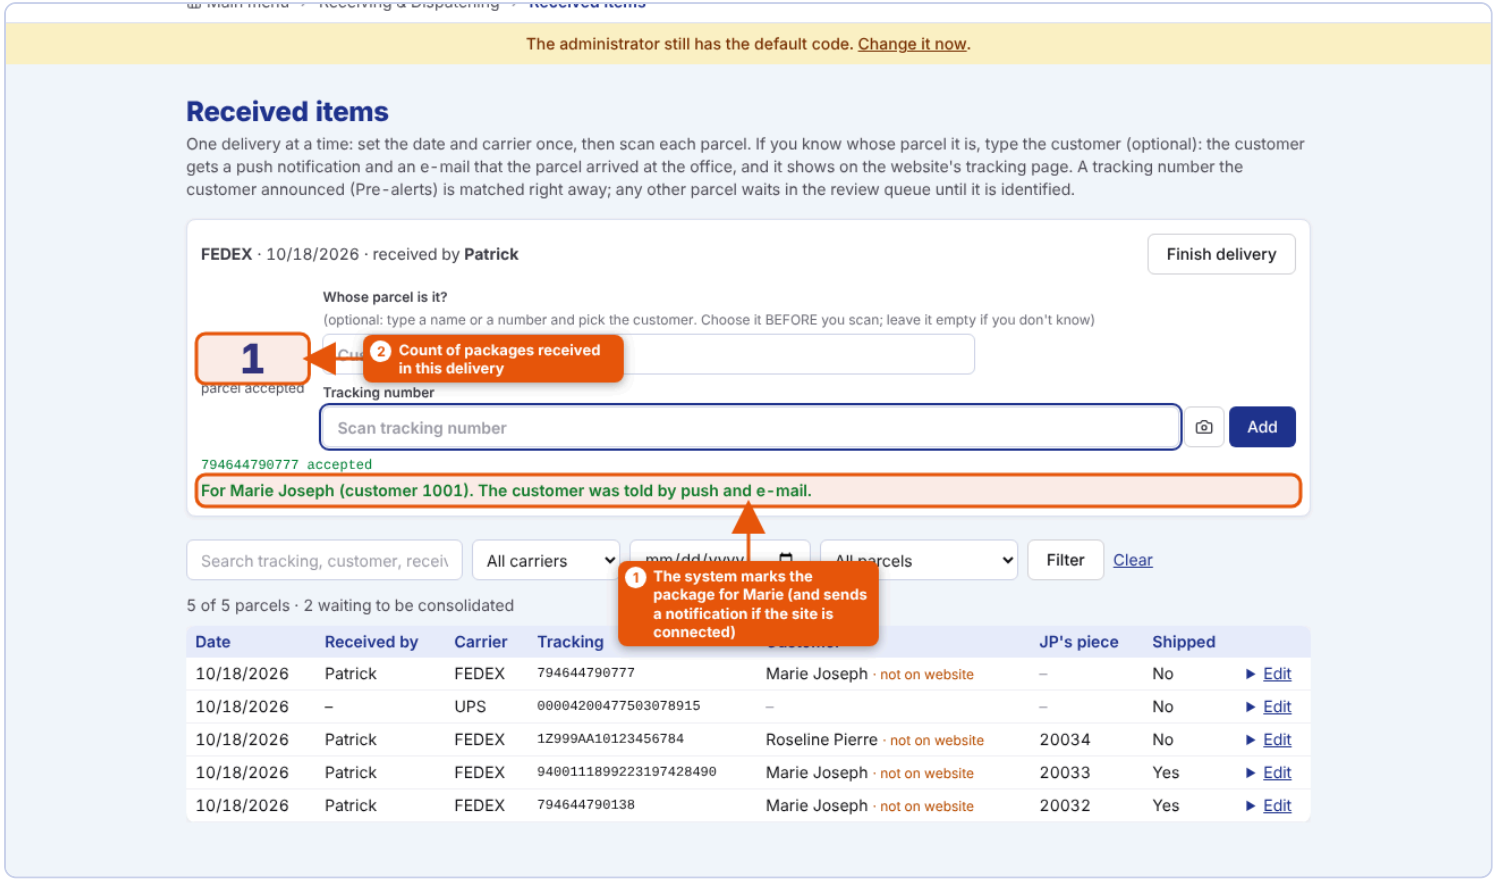

The scanner works like a keyboard. Select the customer (optional) FIRST, then scan the code. It reads a barcode OR a QR code and picks up the tracking number by itself (UPS 1Z..., USPS 420+zip, FedEx 34 digits, tracking link).

1. Select the customer BEFORE scanning (if known)
2. Scan the number here (QR or barcode)
3. Or click Add

> **Tip:** The camera (camera icon) reads the same things.

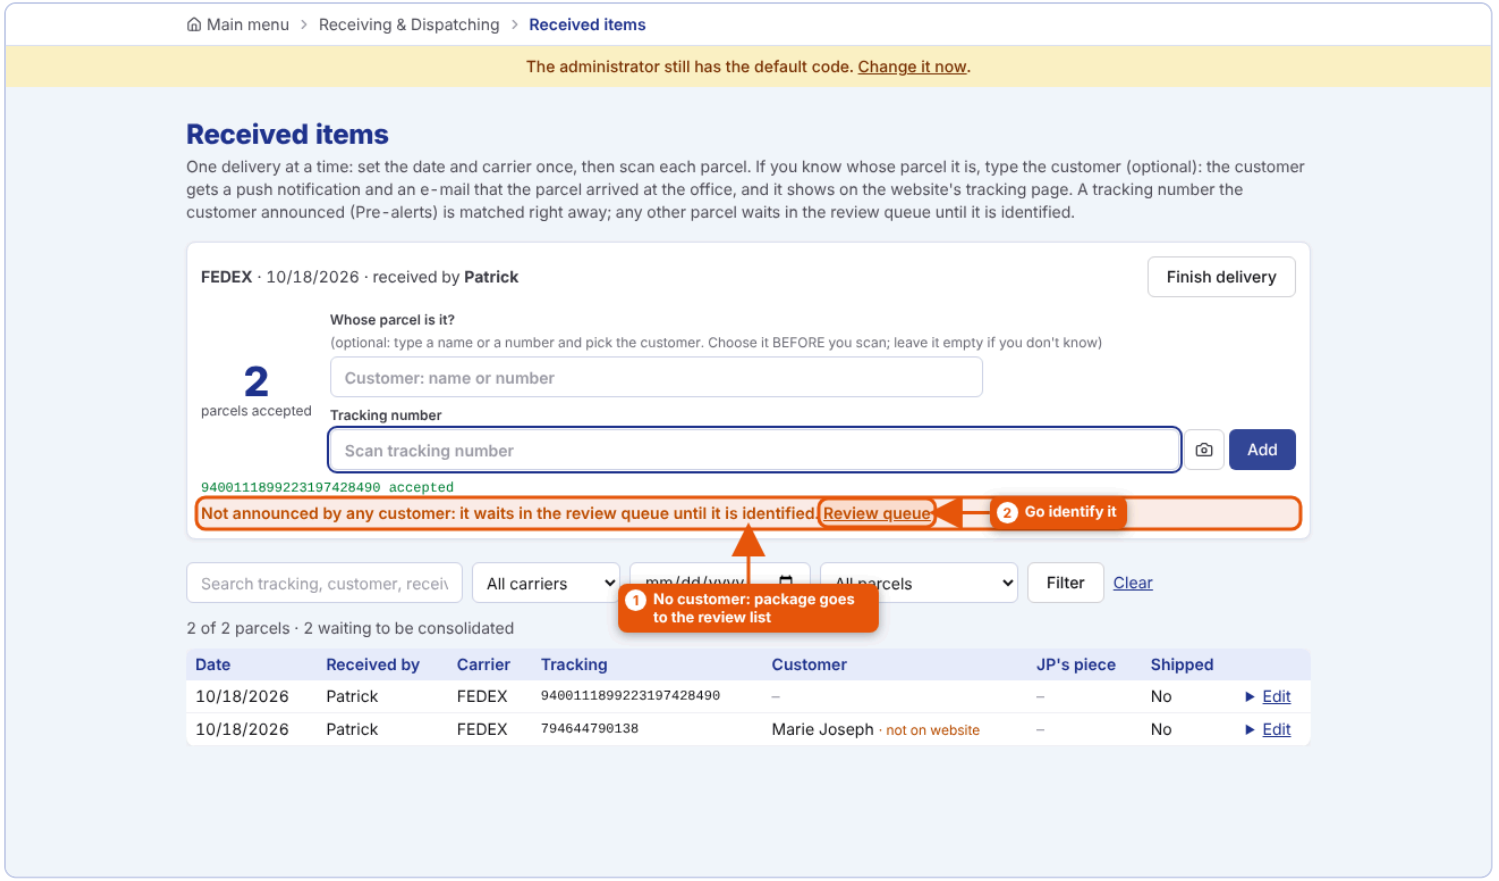

F Receiving parcels (Received items)

The package is assigned to the customer. The count goes up. The "your package arrived at the office" e-mail goes out AUTOMATICALLY: there is no button to press. If the customer has a website account, they get a push + e-mail; if not, the e-mail goes to the address on their record (if it is a real e-mail).

1. The system marks the package for Marie (and sends a notification if the site is connected)
2. Count of packages received in this delivery

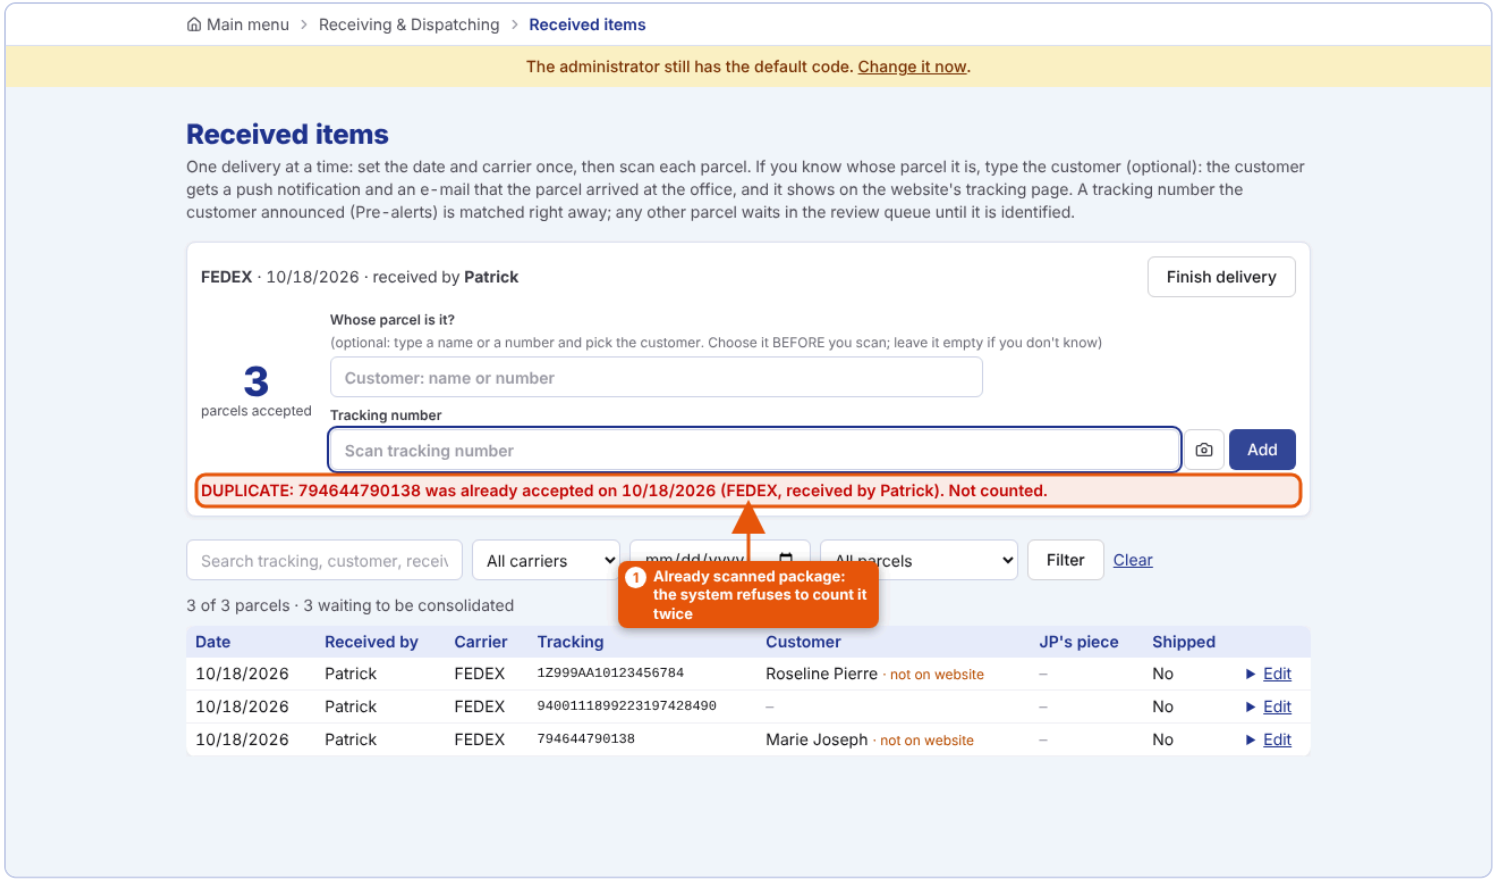

F Receiving parcels (Received items)

No customer: the package goes to the "Review queue" until you identify it.

1. No customer: package goes to the review list
2. Go identify it

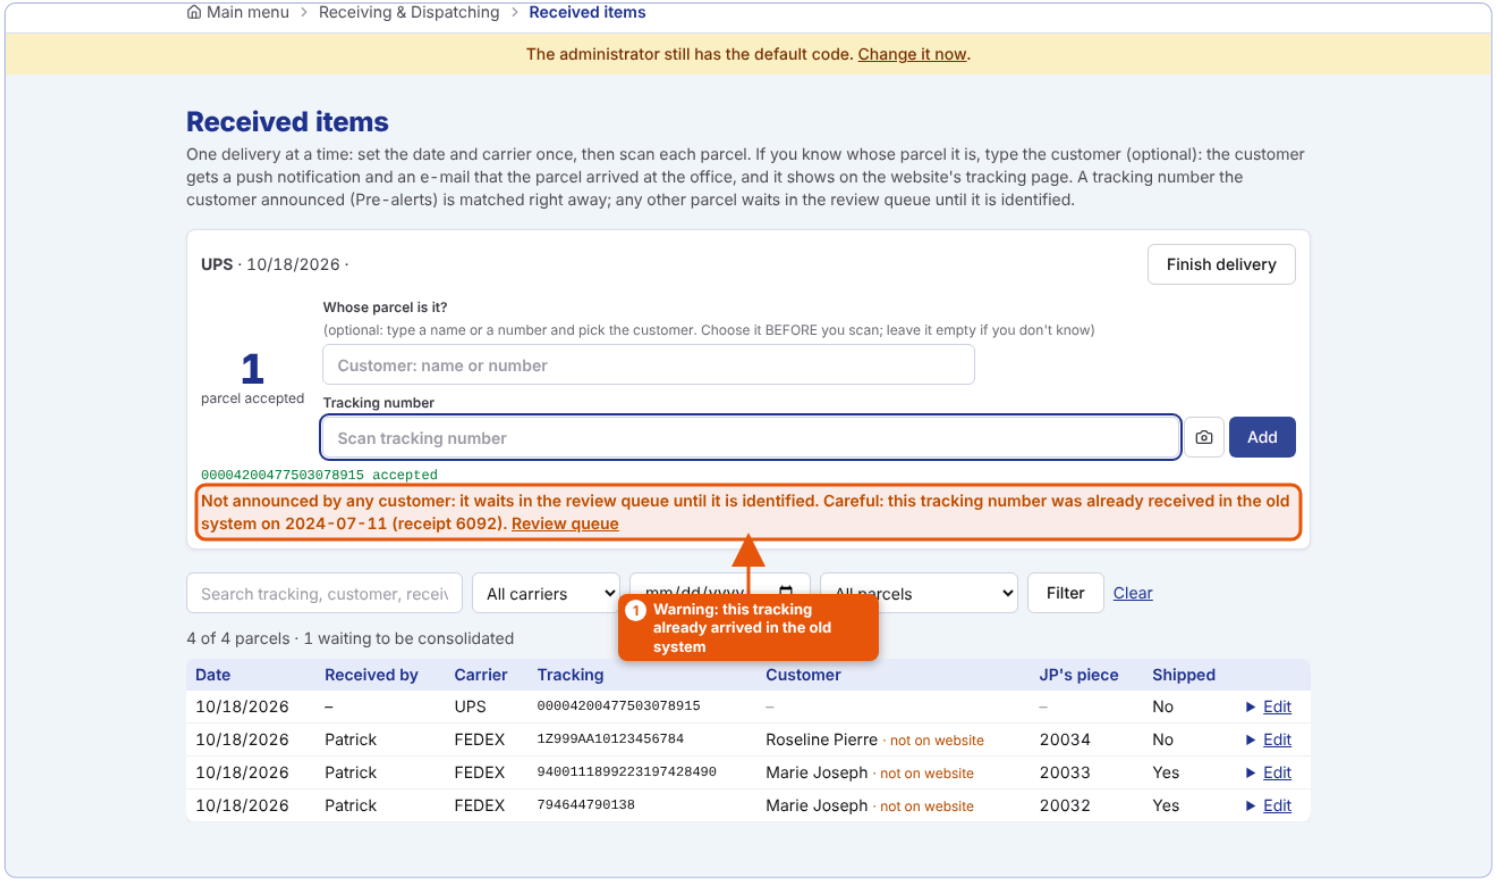

F Receiving parcels (Received items)

If you scan the same package a second time, the system says "DUPLICATE" and does not count it.

1. Already scanned package: the system refuses to count it twice

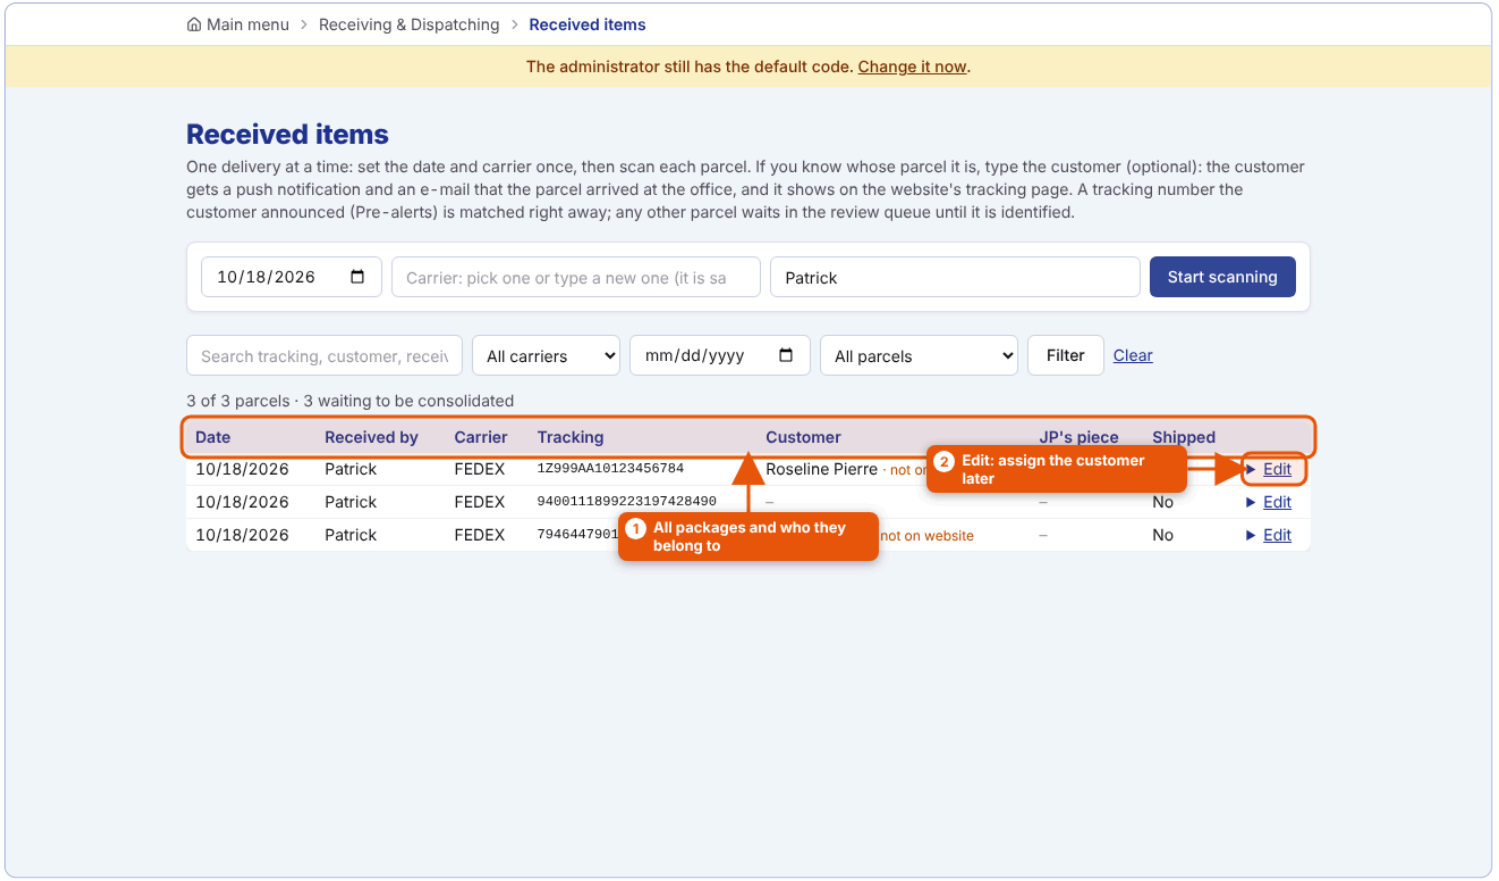

F Receiving parcels (Received items)

If the tracking number already arrived in the old system (Access), the system warns you (it blocks nothing: a customer can order again). The history is on the Old receipts page (Step W).

1. Warning: this tracking already arrived in the old system

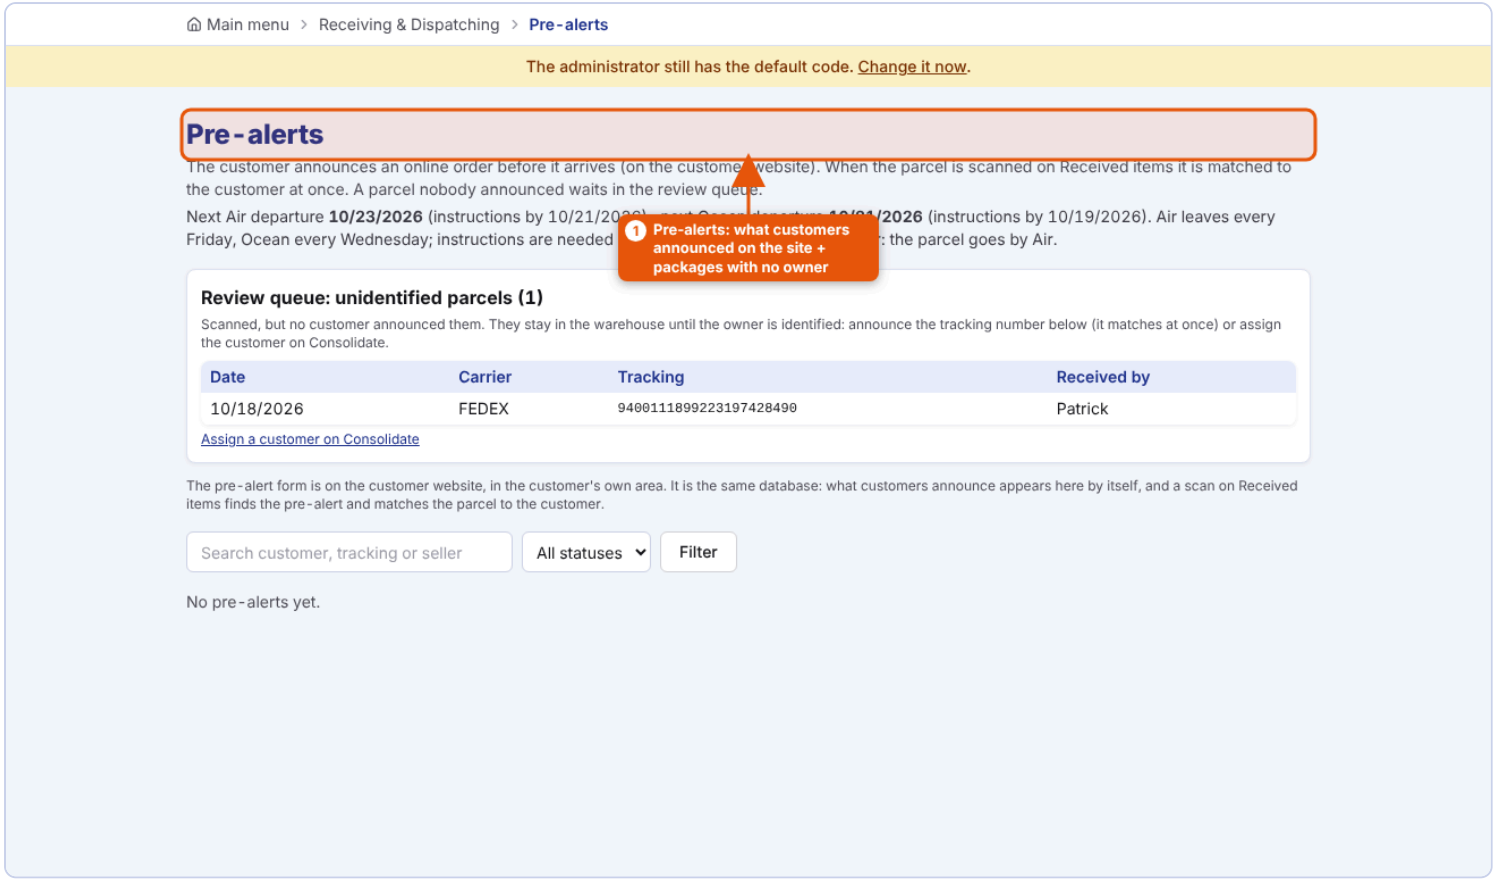

F Receiving parcels (Received items)

All packages, and whose they are. "Edit" lets you correct the tracking number or assign the customer later (this sends the notification).

1. All packages and who they belong to
2. Edit: assign the customer later

G Pre-alerts and unclaimed parcels

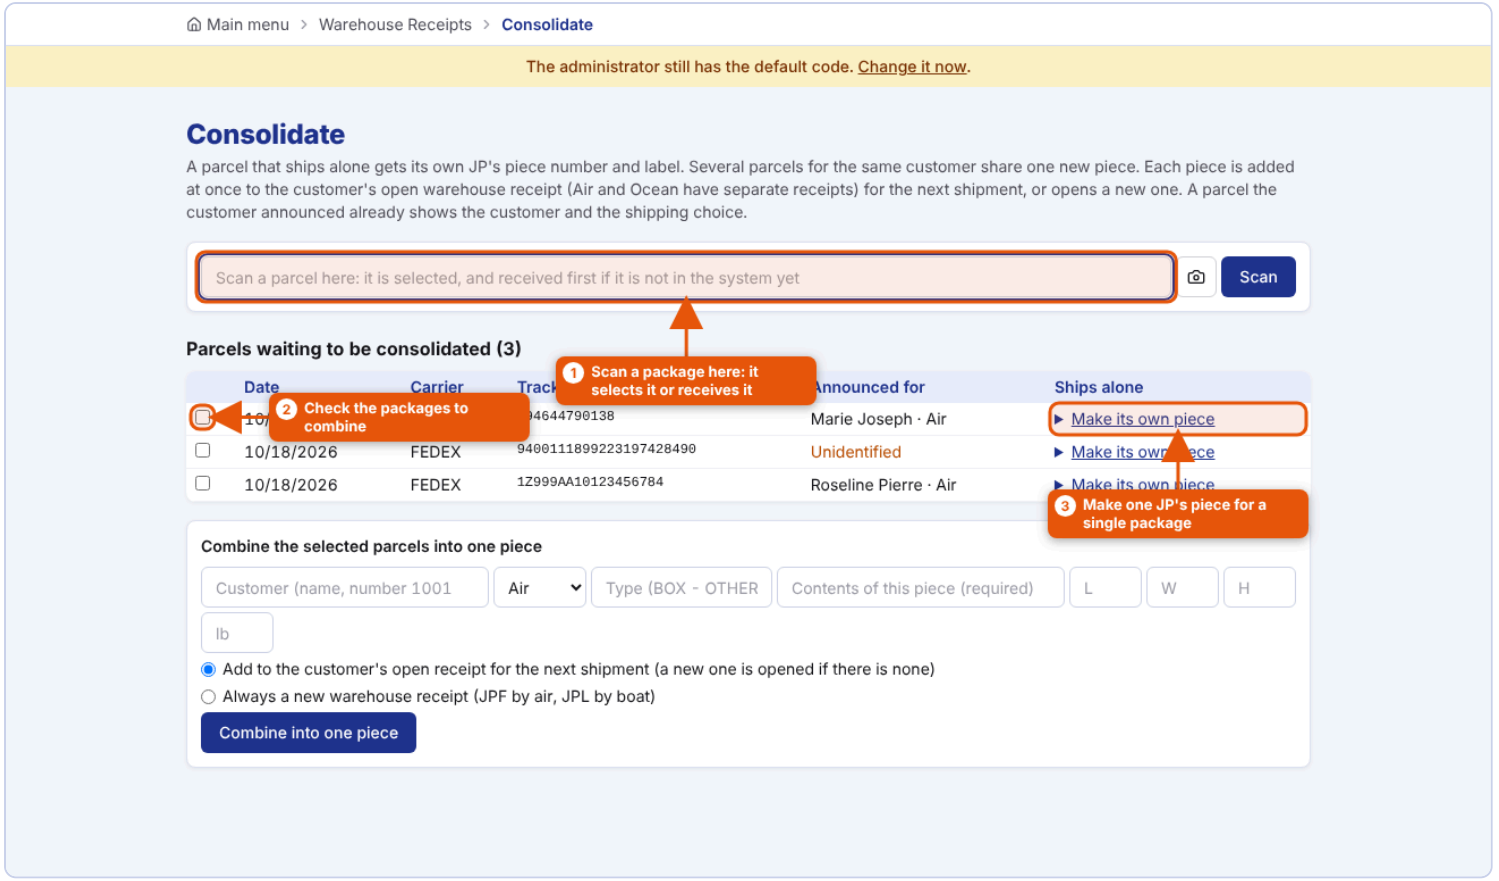

Why: Customers announce what they expect on the website. Here you see what they announced.

Receiving & Dispatching → Pre-alerts. When a package is scanned with a tracking number that was announced, the system knows the customer, the Air/Ocean choice and whether they want to wait for other orders. Packages that were not announced stay in the Review queue.

1. Pre-alerts: what customers announced on the site + packages with no owner

Tip: Pre-alerts appear automatically once the website is connected.

H Consolidate: make JP's pieces

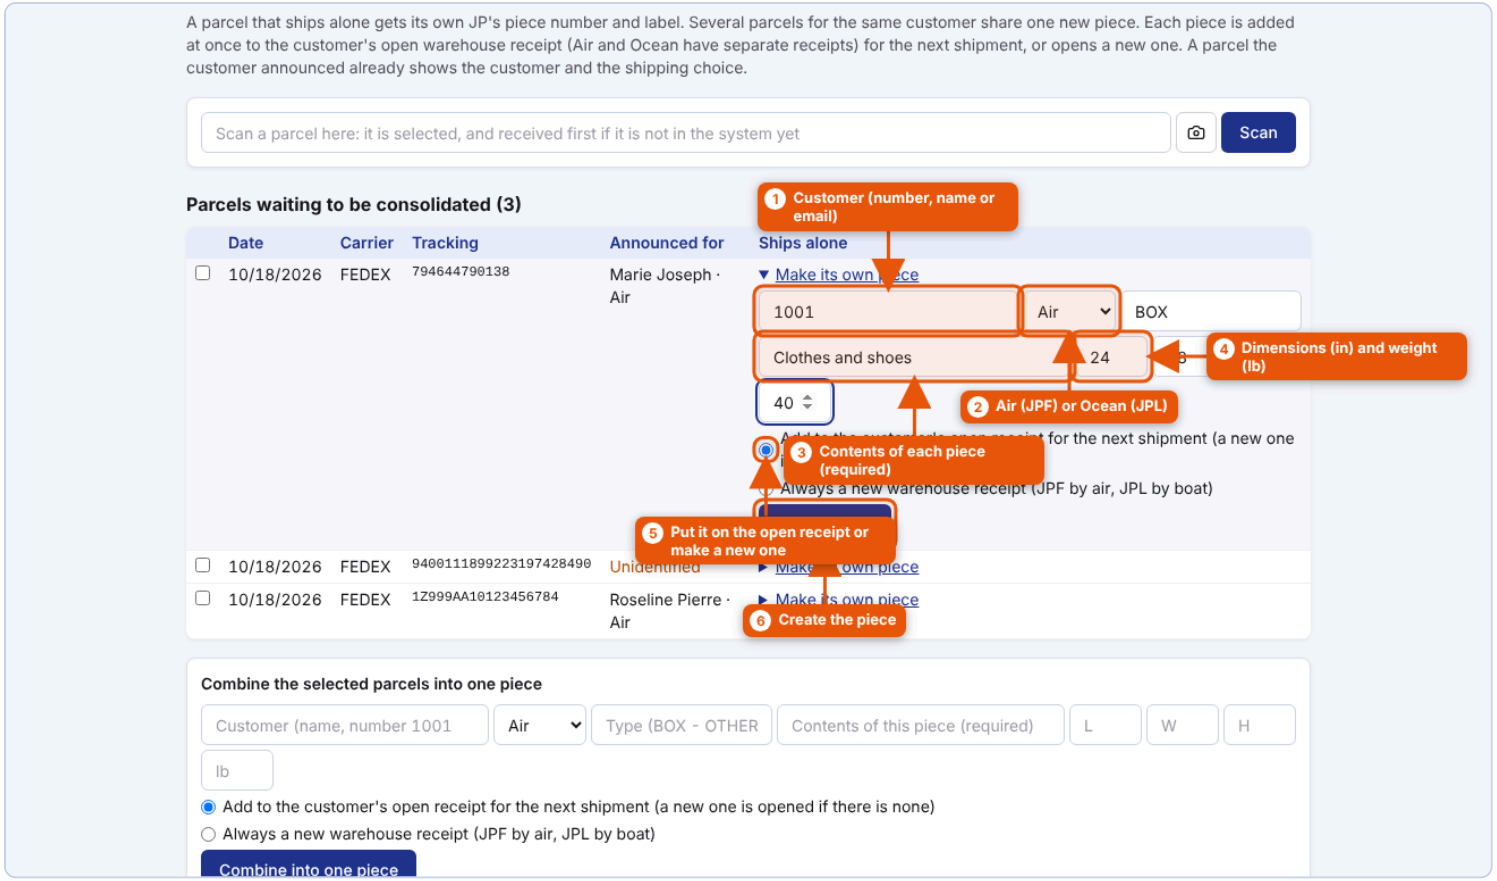

Why: A piece is a box with its own JP's number and label.

Warehouse Receipts → Consolidate. The list of waiting packages. Tick the packages to combine, or click "Make its own piece" for a single package.

1. Scan a package here: it selects it or receives it
2. Check the packages to combine
3. Make one JP's piece for a single package

H Consolidate: make JP's pieces

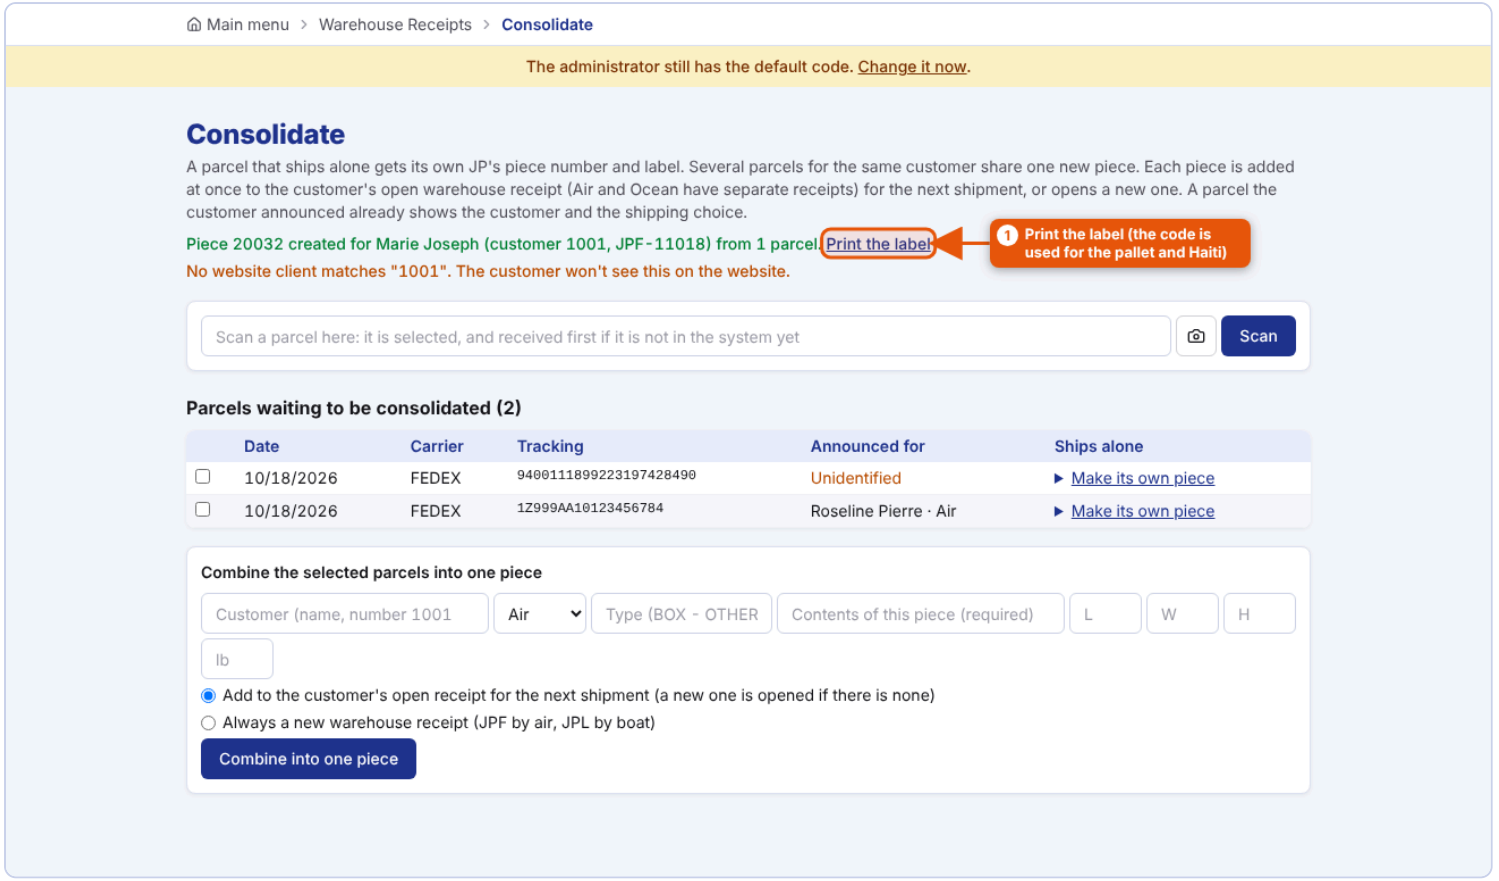

Fill in the customer, Air (JPF) or Ocean (JPL), contents (required), dimensions and weight. Choose whether the piece goes on the customer's open receipt or on a new receipt.

1. Customer (number, name or email)
2. Air (JPF) or Ocean (JPL)
3. Contents of each piece (required)
4. Dimensions (in) and weight (lb)
5. Put it on the open receipt or make a new one
6. Create the piece

> **Tip:** Air and Ocean are never on the same receipt.

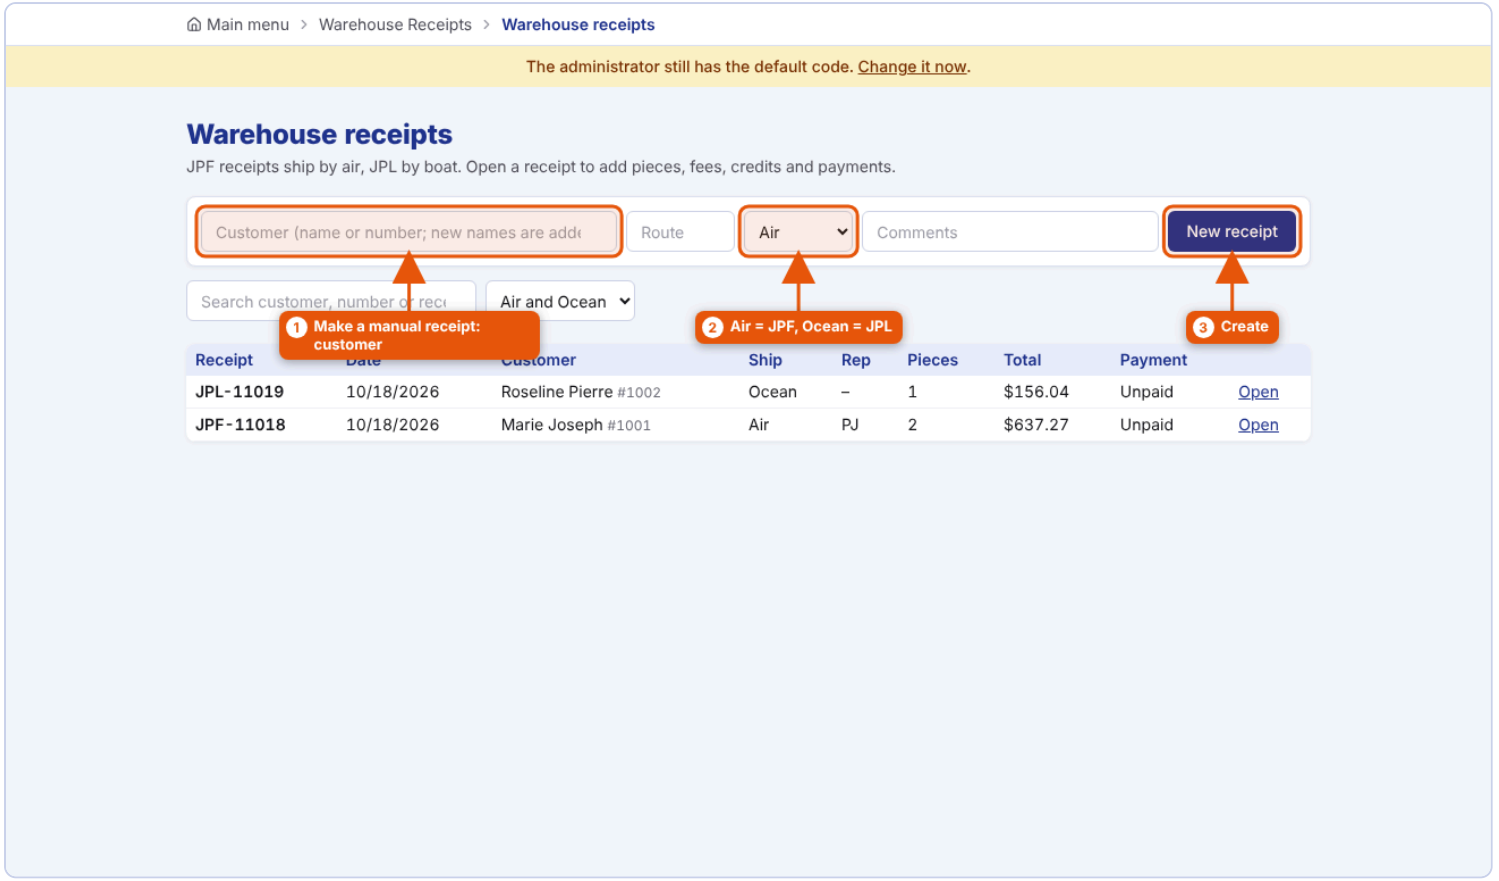

H Consolidate: make JP's pieces

The piece is created with its receipt (JPF-11018). "Print the label" prints the label: the code contains customer|receipt|piece.

1. Print the label (the code is used for the pallet and Haiti)

I Receipt: pieces, fees, insurance and destination

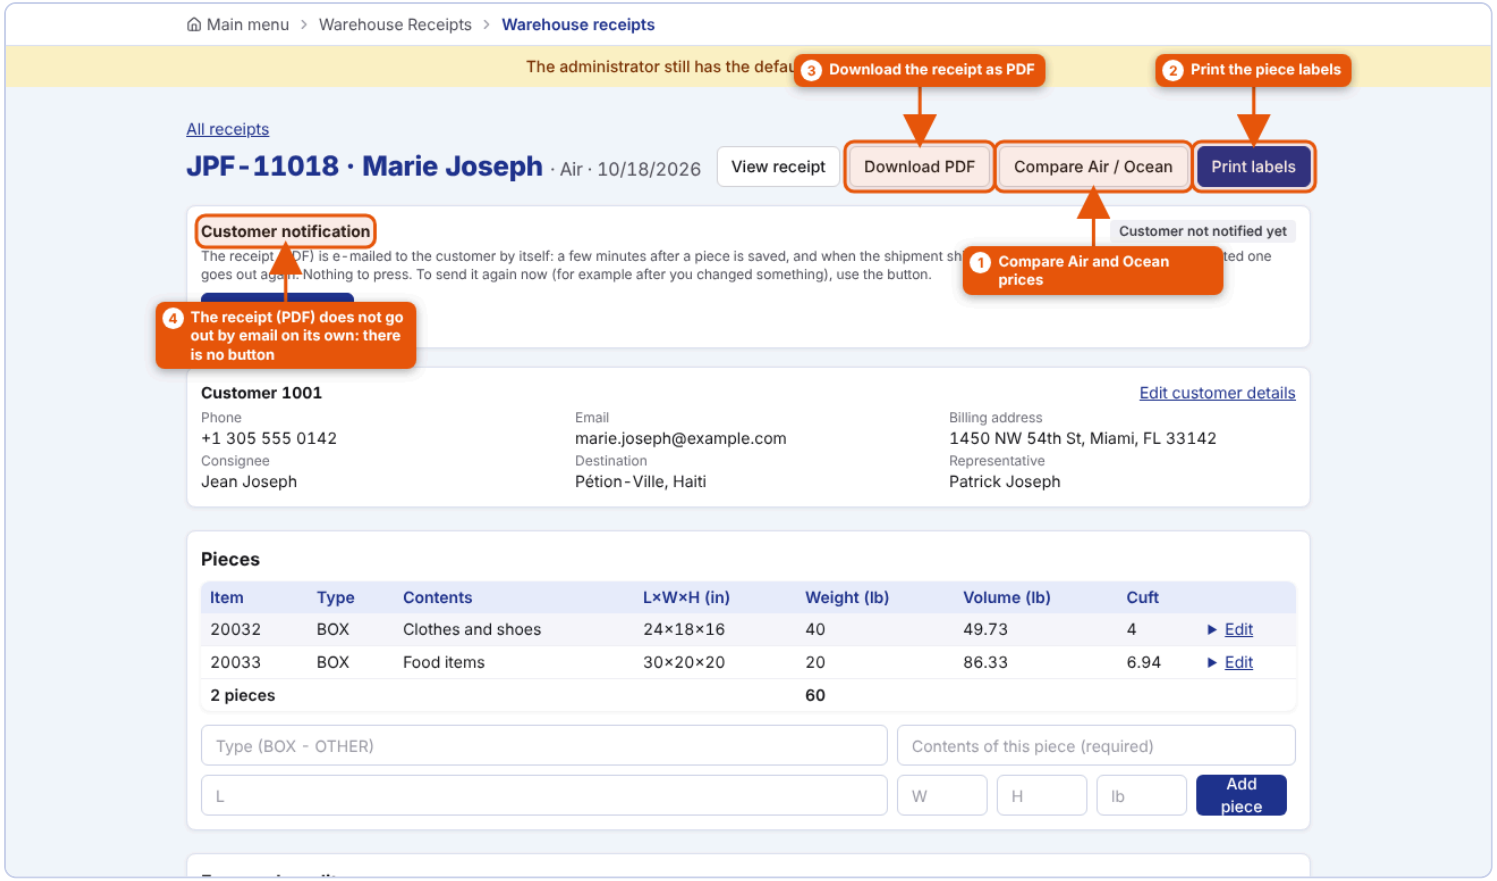

Why: The receipt is the customer's file for one trip. It calculates the price.

Warehouse Receipts → Warehouse receipts. The list of receipts (JPF = Air, JPL = Ocean). You can also create a receipt manually.

1. Make a manual receipt: customer
2. Air = JPF, Ocean = JPL
3. Create

I Receipt: pieces, fees, insurance and destination

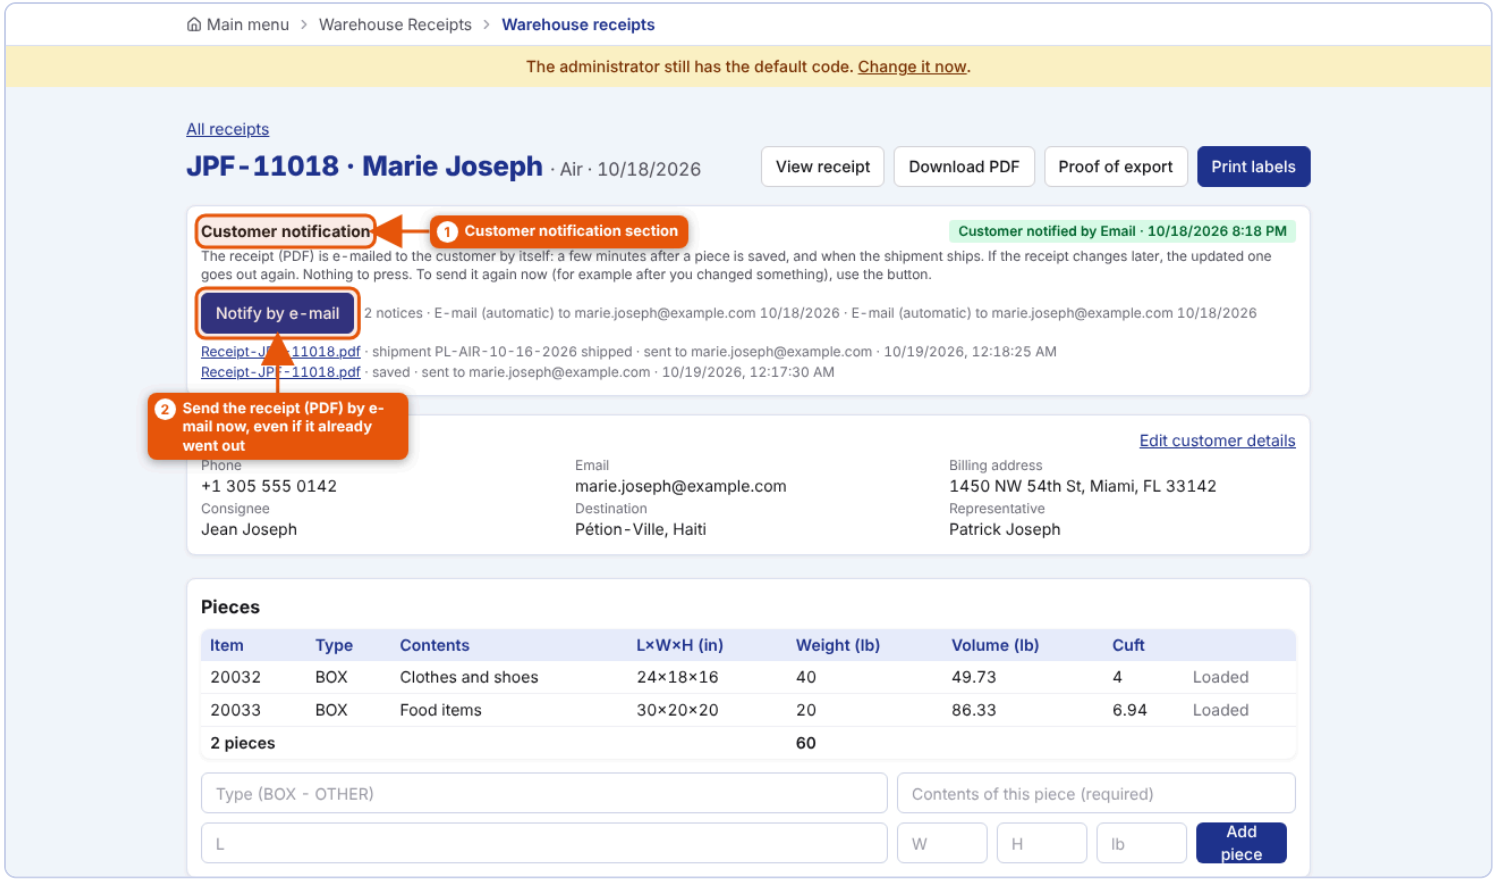

Top of the receipt: View receipt, Download PDF, Compare Air/Ocean, Print labels. In "Customer notification" the receipt (PDF) is e-mailed AUTOMATICALLY a few minutes after a piece is saved (several pieces for the same customer = one e-mail), and again if the receipt changes. The PDF that was sent is kept below.

1. Compare Air and Ocean prices
2. Print the piece labels
3. Download the receipt as PDF
4. The receipt (PDF) does not go out by email on its own: there is no button

> **Tip:** Nothing to press: the e-mail goes by itself. The "Notify by e-mail" button (next page) is for when you want to send it again.

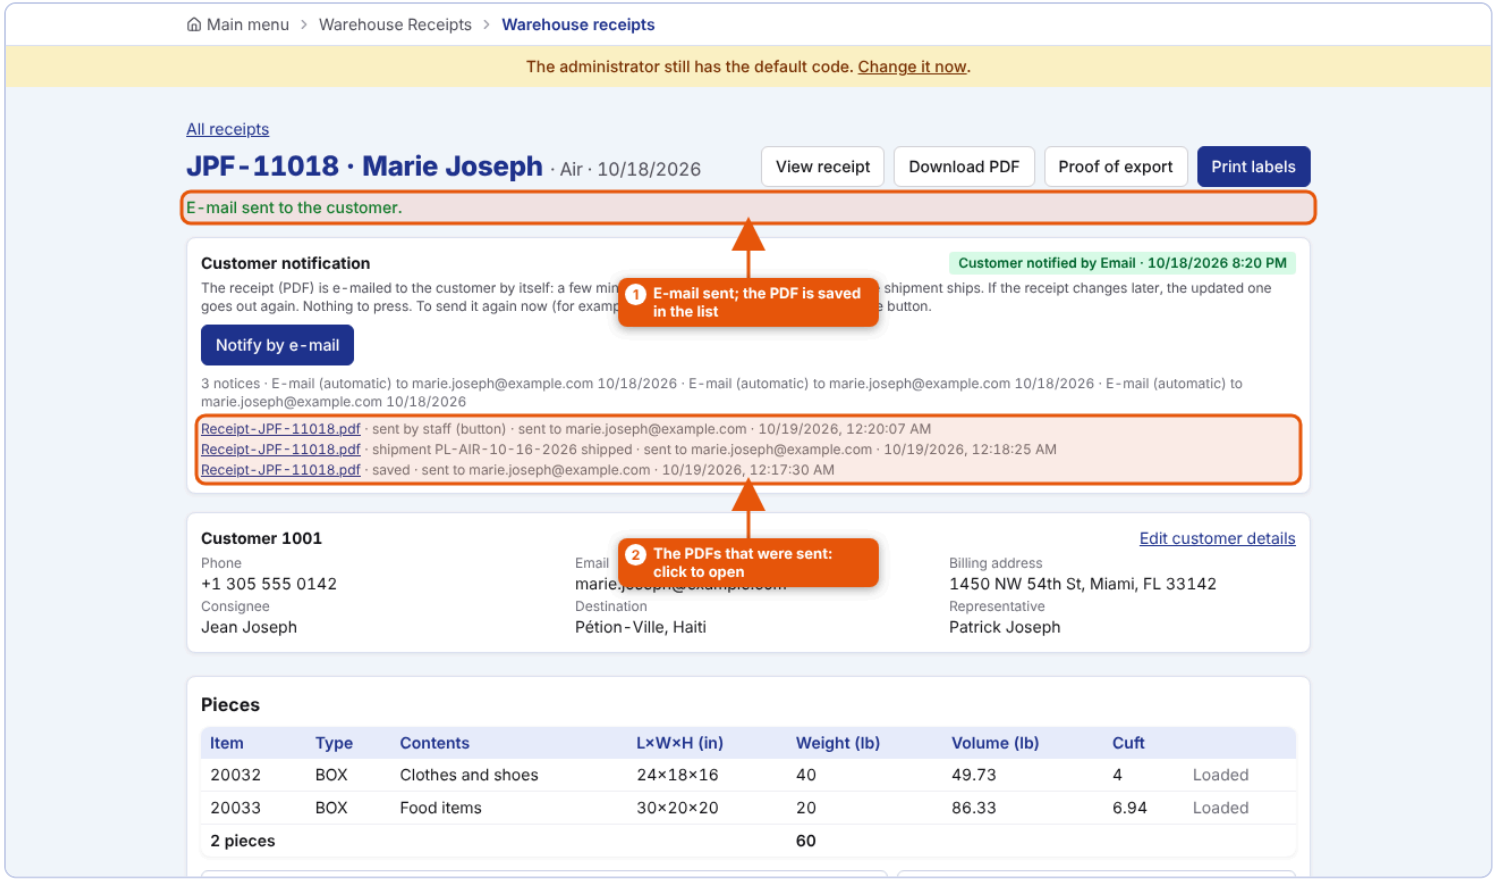

I Receipt: pieces, fees, insurance and destination

The "Notify by e-mail" button (on every page where it makes sense: receipt, Arrivals, shipment, invoice). Even though the e-mail goes by itself, you can send it again at any time, for example after you finish changing the receipt.

1. Customer notification section
2. Send the receipt (PDF) by e-mail now, even if it already went out

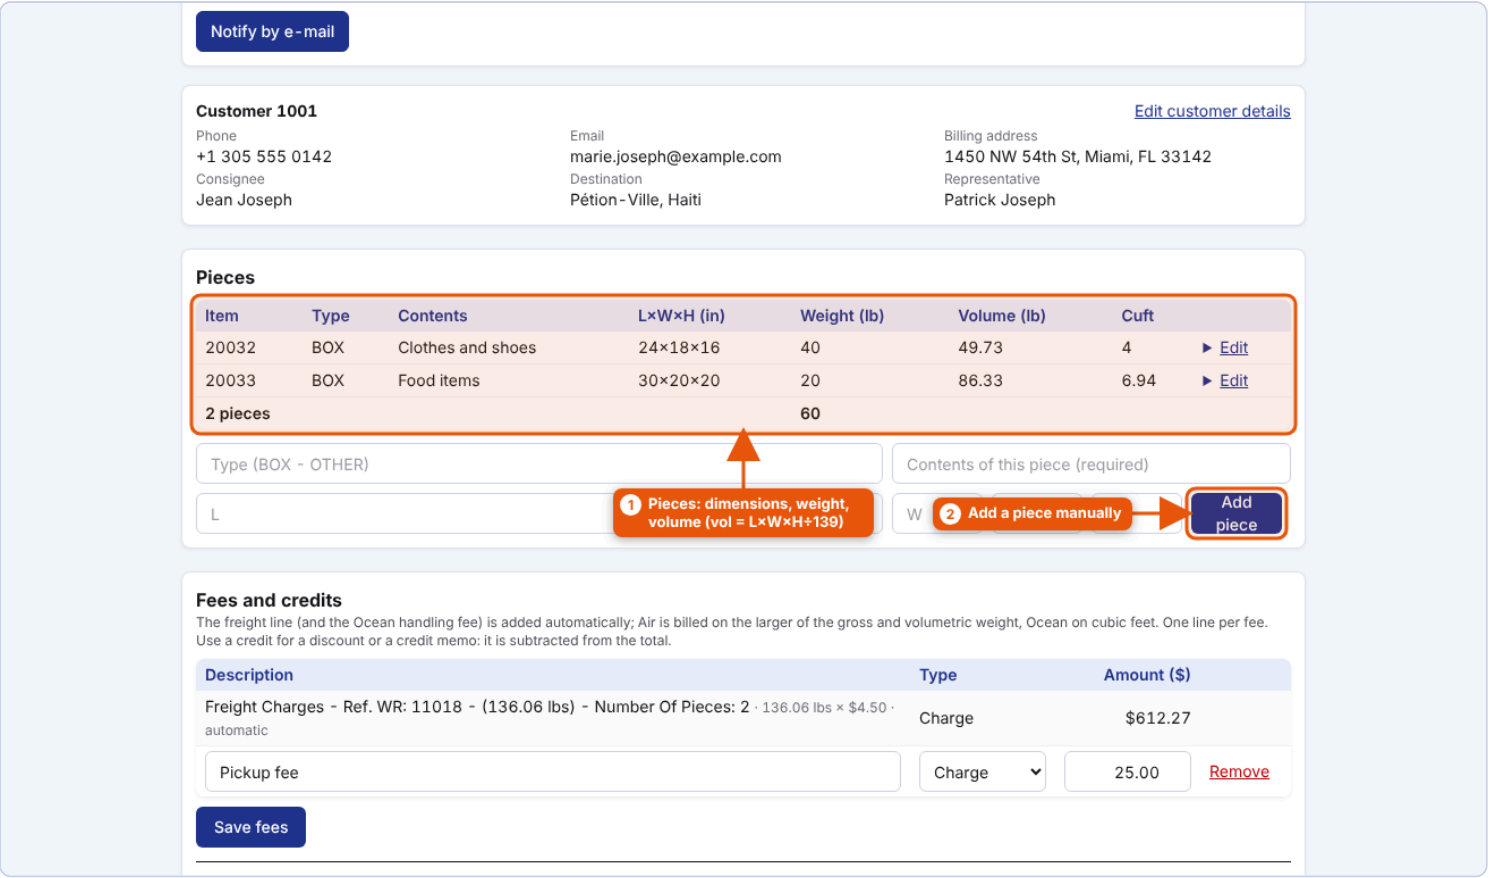

I Receipt: pieces, fees, insurance and destination

After you click: the message "E-mail sent to the customer". The e-mail goes with the receipt as a PDF attachment and the PDF is saved in the list (click to open it). If e-mail is not set up, or the customer has no usable address, a red message tells you why.

1. E-mail sent; the PDF is saved in the list
2. The PDFs that were sent: click to open

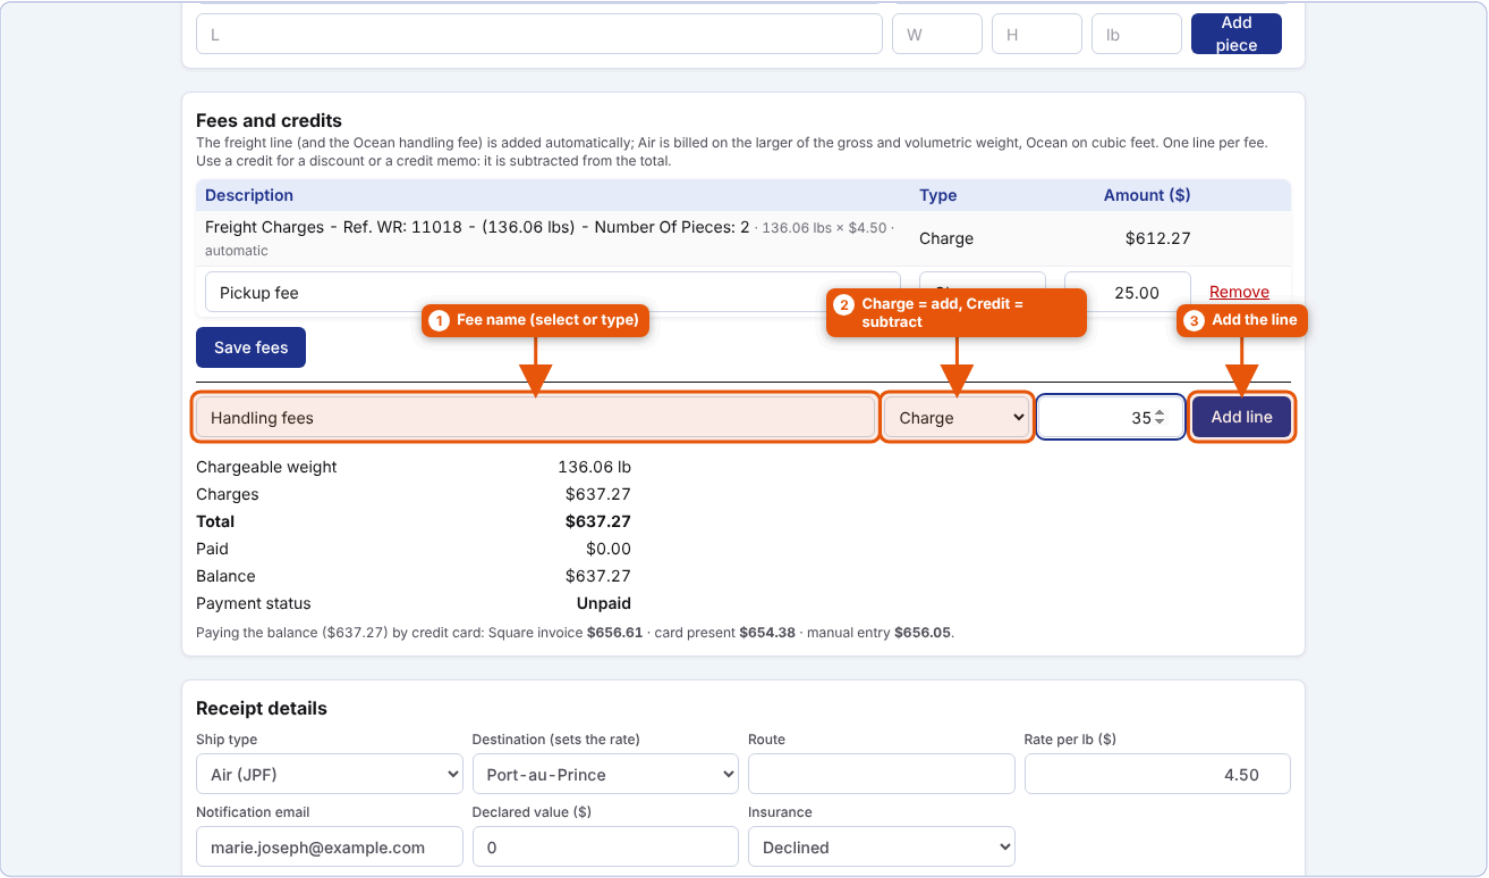

I Receipt: pieces, fees, insurance and destination

The pieces: dimensions, weight, volume and cubic feet. "Vol" = L×W×H ÷ 139. You can add a piece manually.

1. Pieces: dimensions, weight, volume (vol = L×W×H÷139)
2. Add a piece manually

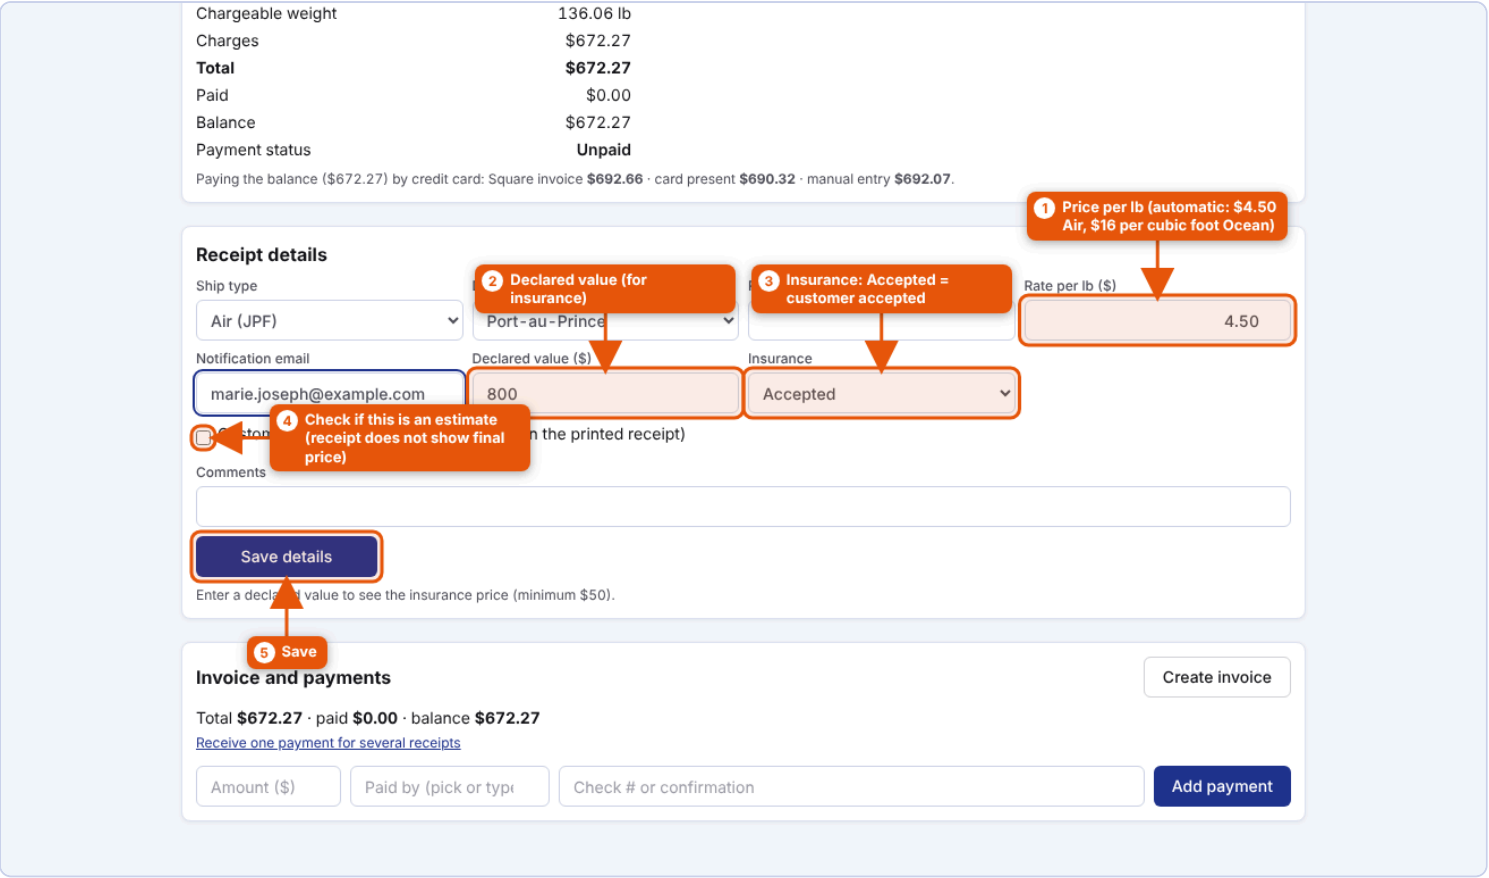

I Receipt: pieces, fees, insurance and destination

Fees and credits. The shipping fee is automatic ("automatic" line). Add other fees (Handling, Pickup, Storage…) or a credit/discount (Credit) that reduces the total.

1. Fee name (select or type)
2. Charge = add, Credit = subtract
3. Add the line

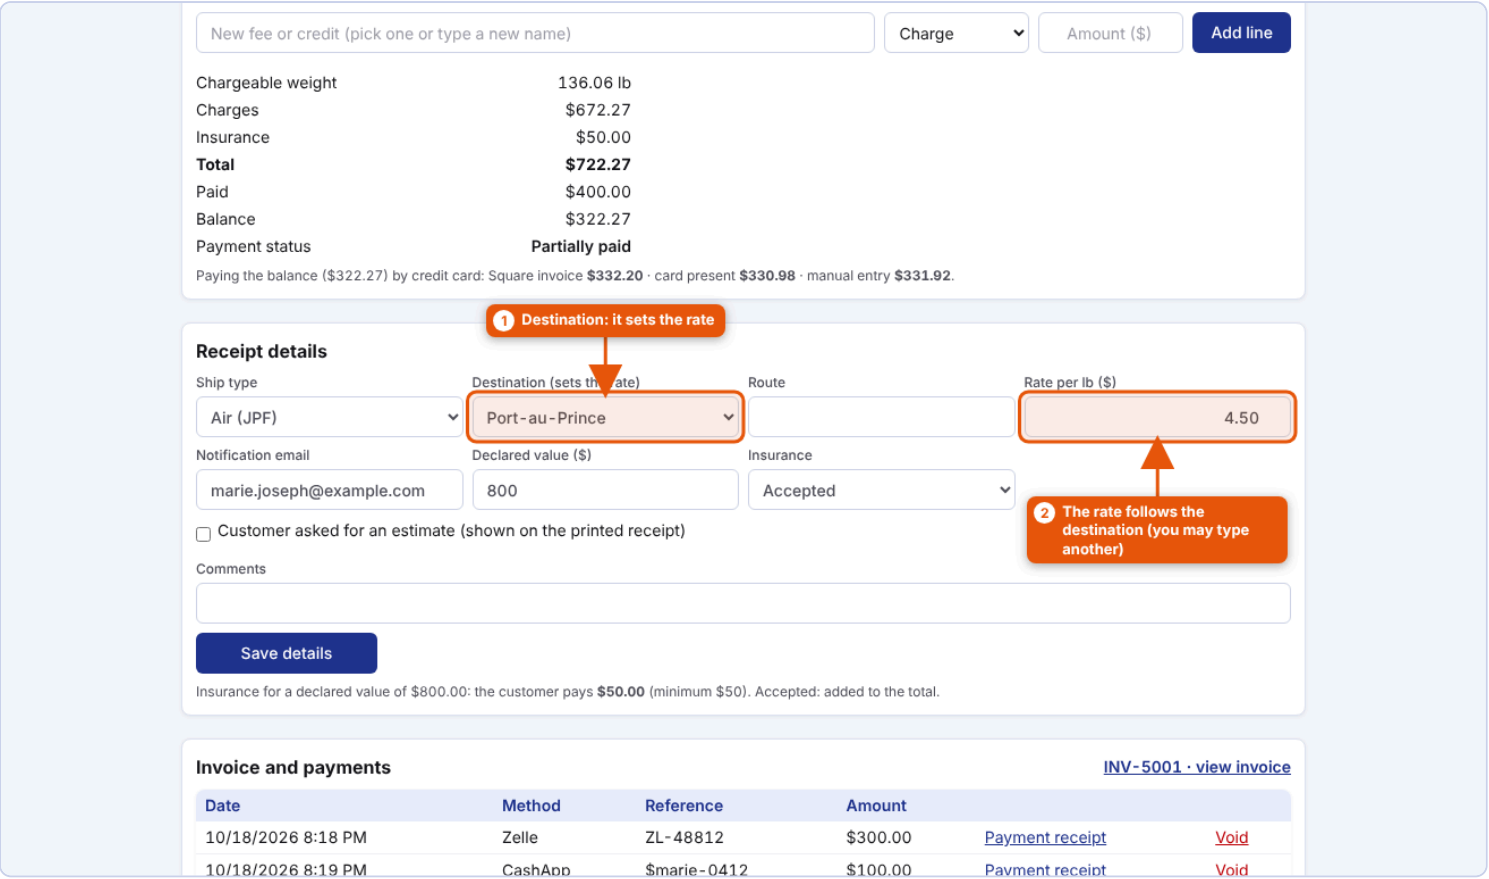

I Receipt: pieces, fees, insurance and destination

Receipt details: Air/Ocean, price per pound or per cubic foot, e-mail, declared value and insurance. If the customer accepts insurance, set "Accepted". Tick "estimate" if it is an estimate (the receipt does not show a final price).

1. Price per lb (automatic: $4.50 Air, $16 per cubic foot Ocean)
2. Declared value (for insurance)
3. Insurance: Accepted = customer accepted
4. Check if this is an estimate (receipt does not show final price)
5. Save

1 Receipt: pieces, fees, insurance and destination

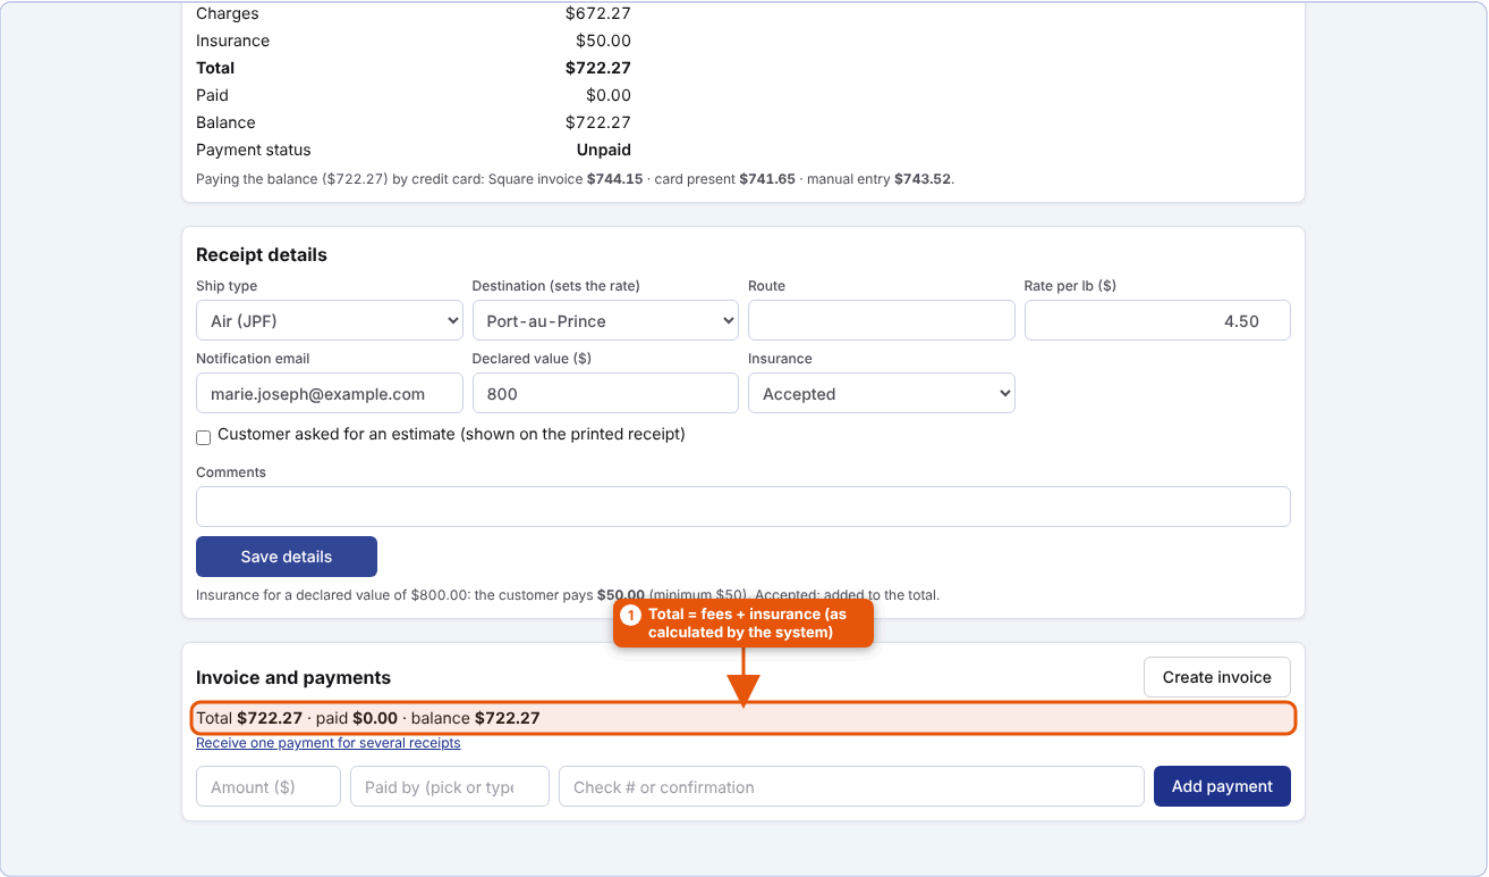

Receipt details has a "Destination" field. Every receipt has a destination (Port-au-Prince, Cap Haitien, Miragoane, Cayes, St Marc, Hinche, Jeremie, Saint Domingue or Miami) and every destination has its own rates. If you change the destination, the rate changes by itself.

1. Destination: it sets the rate
2. The rate follows the destination (you may type another)

Tip: A receipt that already has an invoice cannot change destination: cancel the invoice first. A special rate on the customer's page stays stronger than the destination rate.

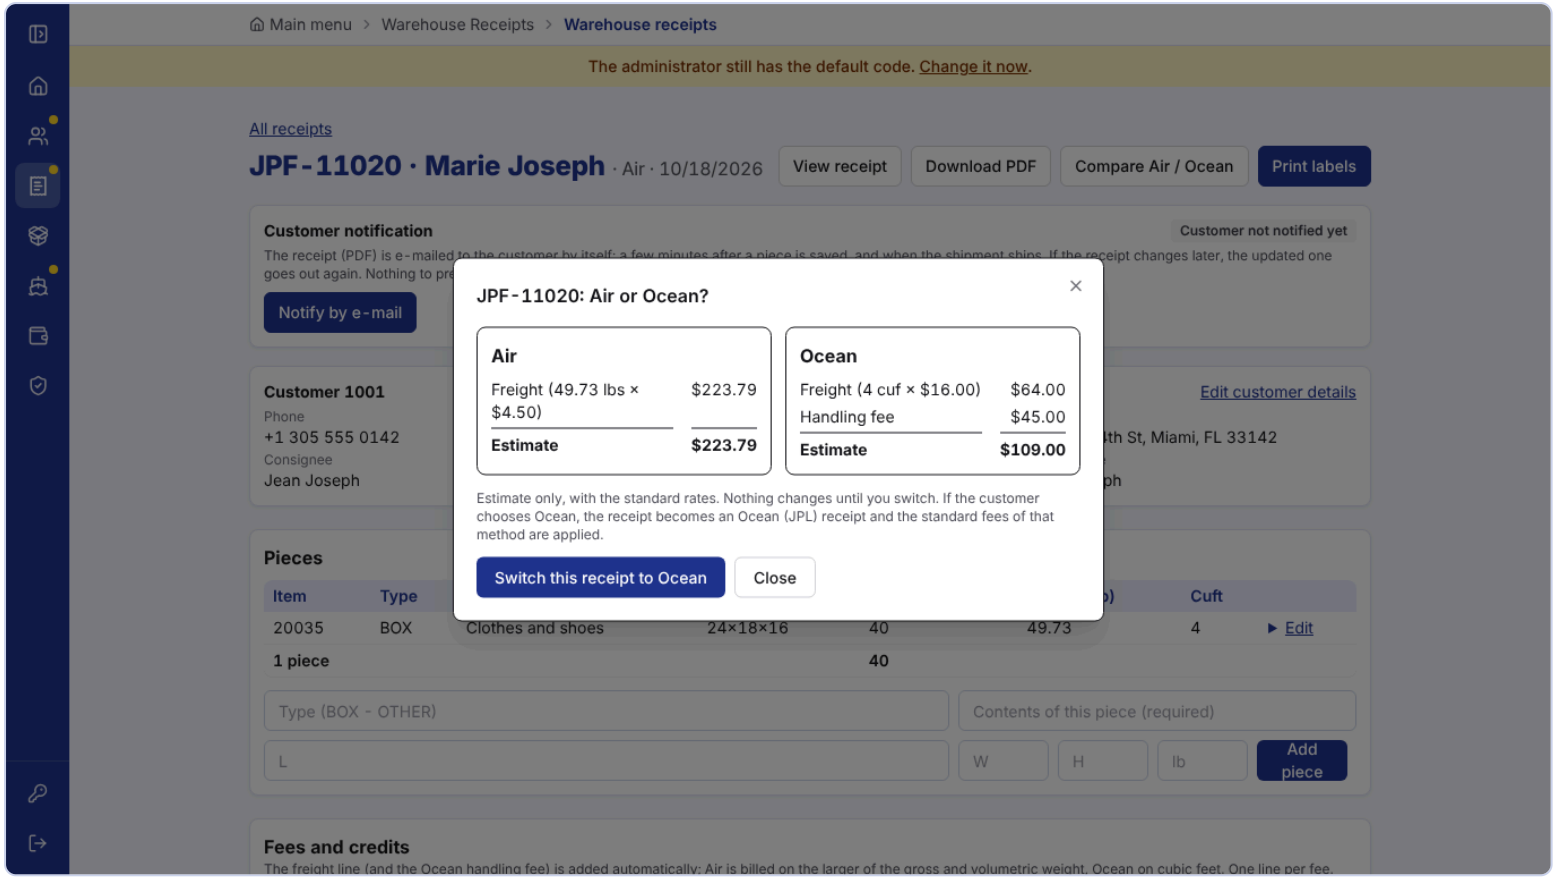

I Receipt: pieces, fees, insurance and destination

Total = shipping fee + other fees + insurance − credit. Below: payments, balance and credit card fees if the customer pays by card.

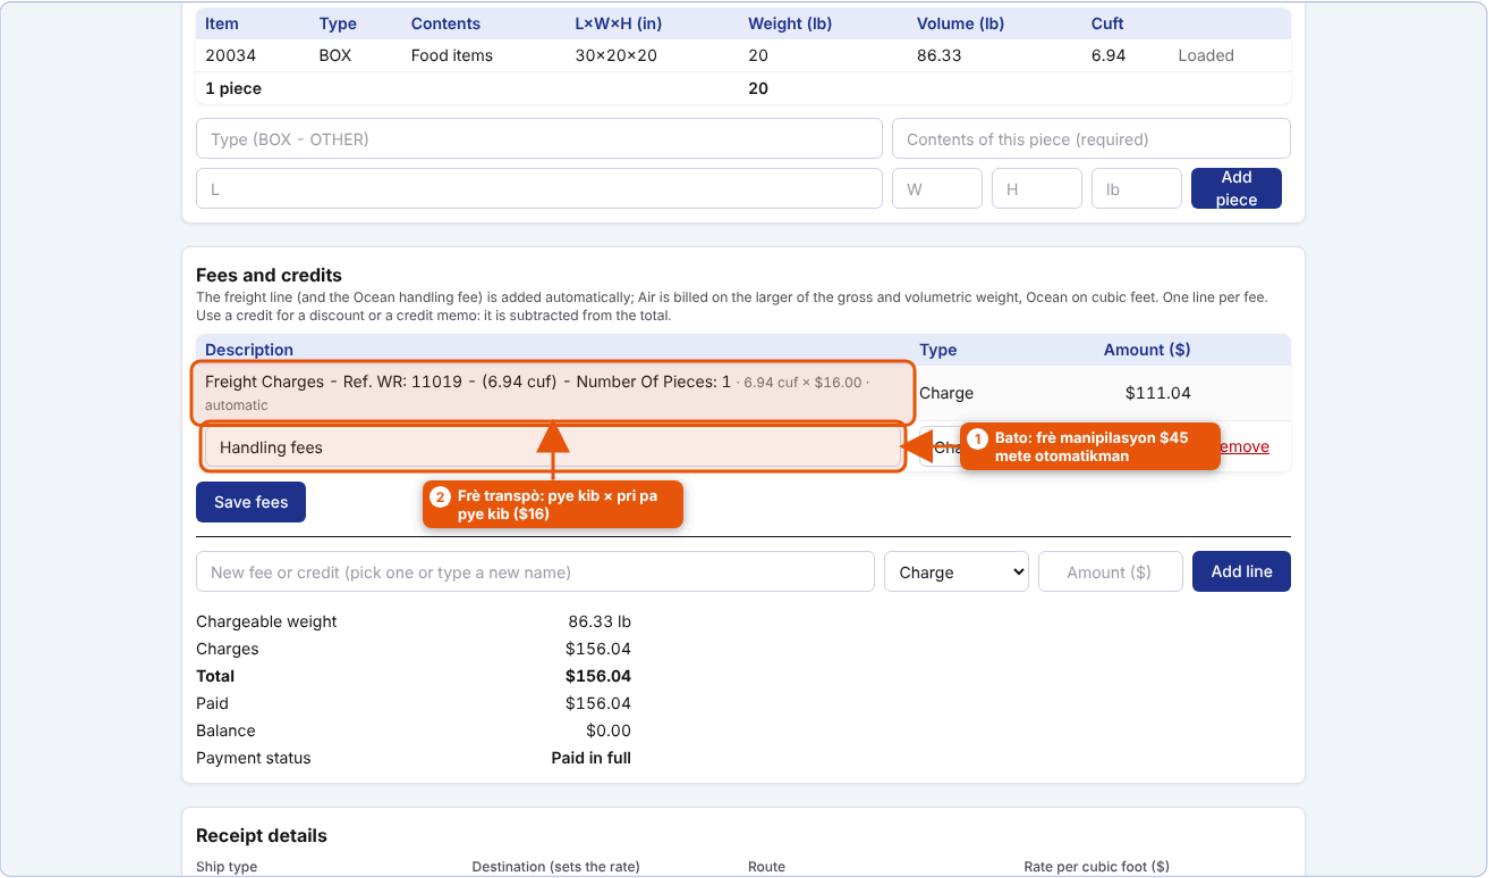

1. Total = fees + insurance (as calculated by the system)

J Receipt: compare, print, labels

Compare Air / Ocean: what the same cargo would cost with the other method (with its own handling fee). "Switch this receipt" changes the receipt (JPF ↔ JPL) if the pieces have not been loaded yet.

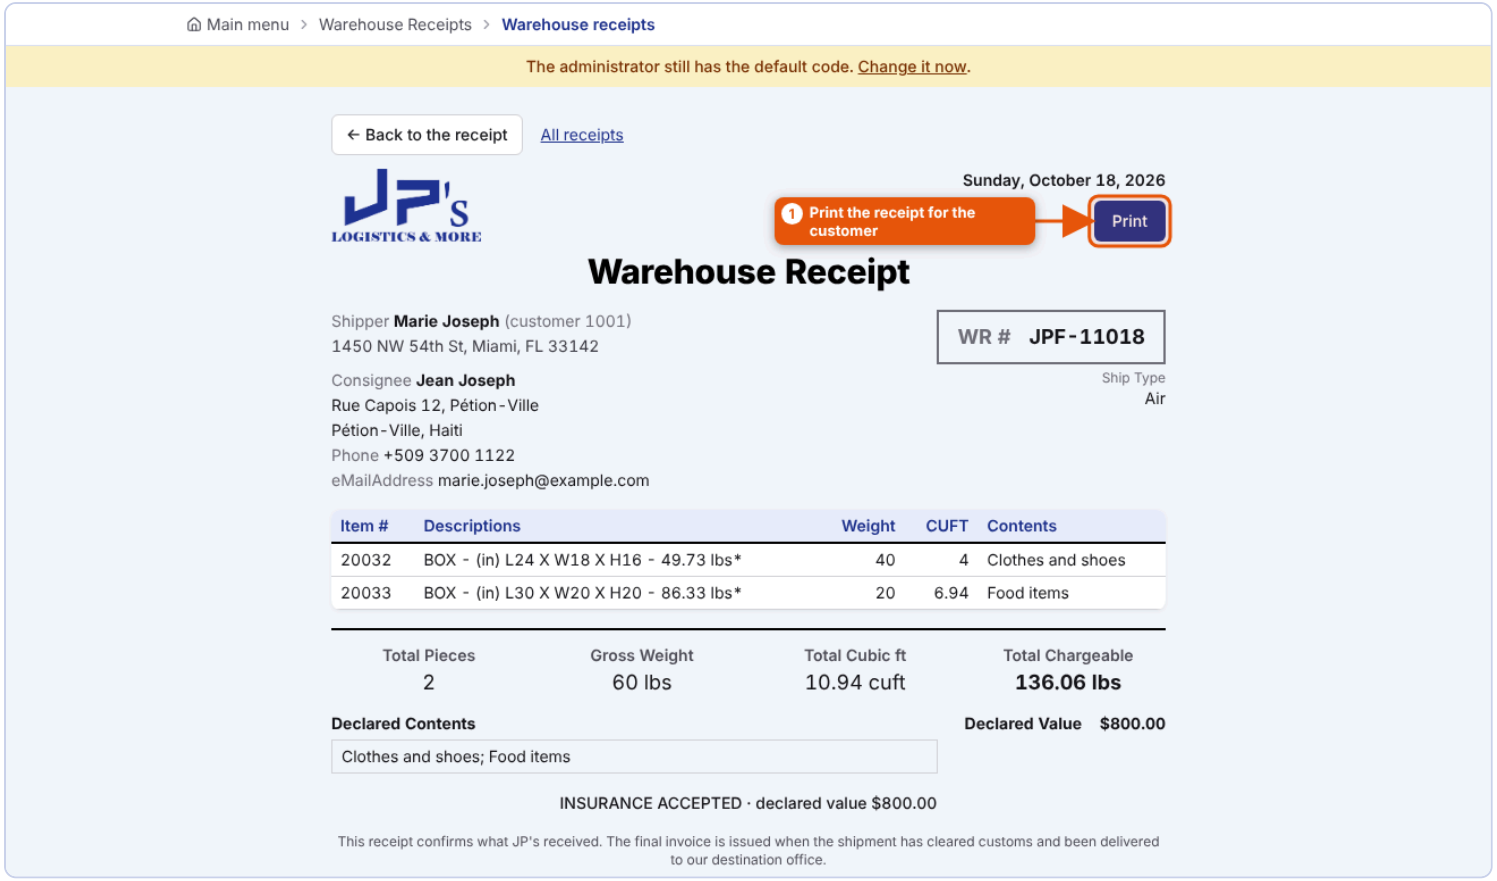

J Receipt: compare, print, labels

Ocean receipt (JPL): the $45 handling fee is added automatically, shipping = cubic feet × rate.

1. Bato: frè manipilasyon $45 mete otomatikman
2. Frè transpò: pye kib × pri pa pye kib ($16)

J Receipt: compare, print, labels

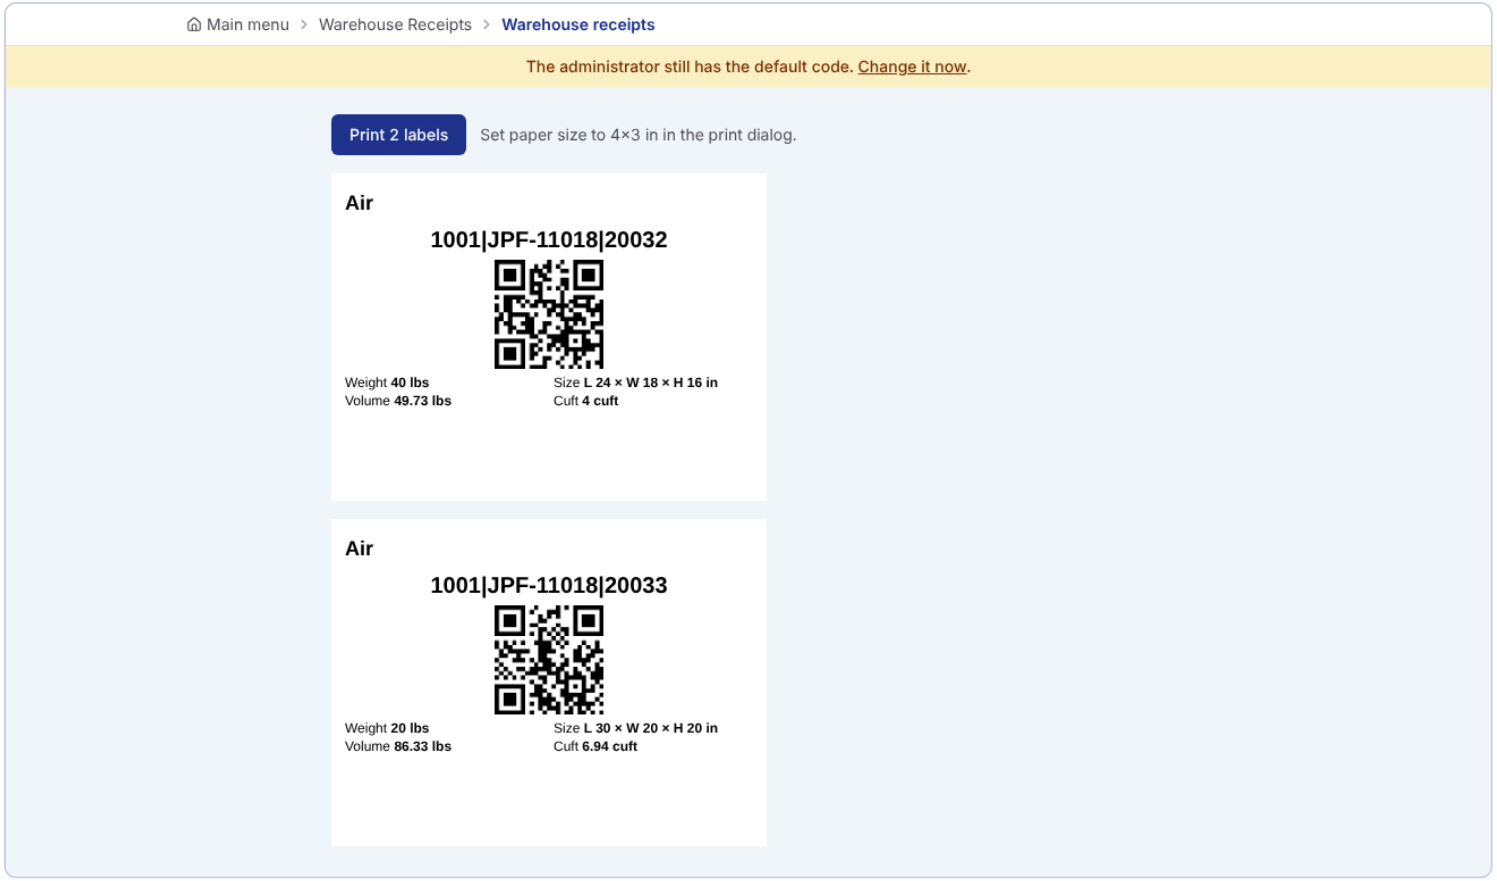

View receipt: the receipt for printing/sending. It contains the contents declaration, insurance and the terms. It shows the price with an "ESTIMATE" note only if it is an estimate.

1. Print the receipt for the customer

> **Tip:** The receipt is never sent twice for the same state. If you change it (new piece, fees...), the new version goes out by itself.

J Receipt: compare, print, labels

Piece labels (4×3 inches), each with a QR code. This is the code you scan to load pallets and in Arrivals PV.

K Rates by destination

Every parcel goes to a destination, and every destination has its own rates. The administrator edits them in **Administration → Fees & rates**.

The destinations

- Port-au-Prince · Cap Haitien · Miragoane · Cayes · St Marc · Hinche · Jeremie
- Saint Domingue
- **Miami**: parcels we take in Haiti to send to Miami

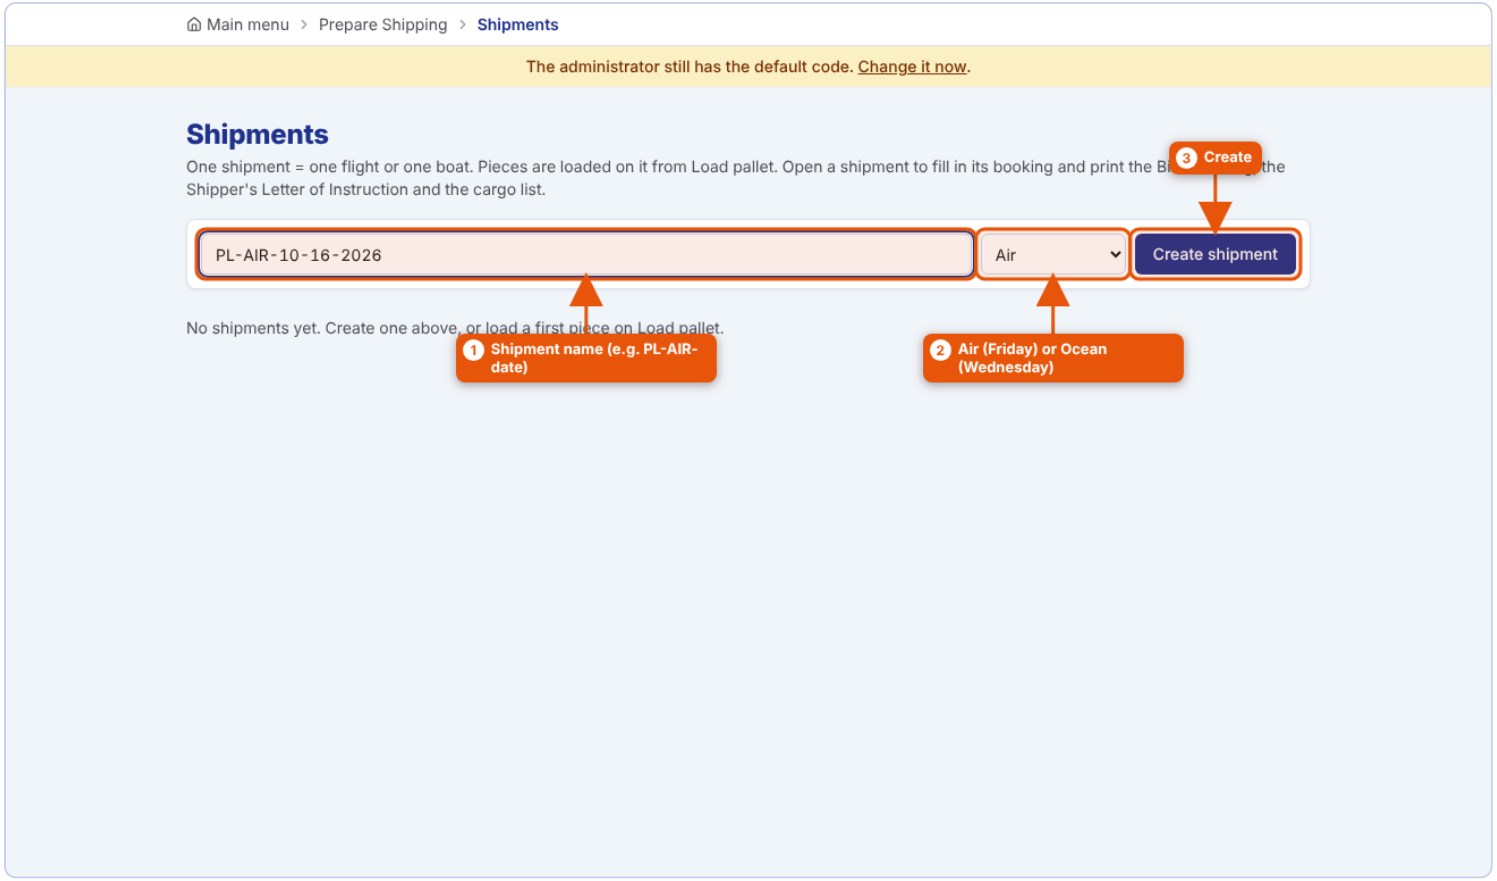

How the rate is chosen

1. A special rate of the **customer** (if their page has one) is always stronger.
2. Otherwise, the rate of the **receipt's destination** (Air per lb, Ocean per cubic foot).
3. Otherwise, the standard rate: $4.50 and $16.

A receipt's destination

- A new receipt takes its destination from the customer's **consignee city**. If the city is not recognised, it is Port-au-Prince.
- You can change it on the receipt (Receipt details → Destination) or on the estimate: the rate changes by itself.
- A receipt with an invoice cannot change destination (cancel the invoice first).
- Changing the rates in the admin page **does not change** receipts already made.
- The destination is printed on the PDF receipt ("To: ...").

L Create a shipment

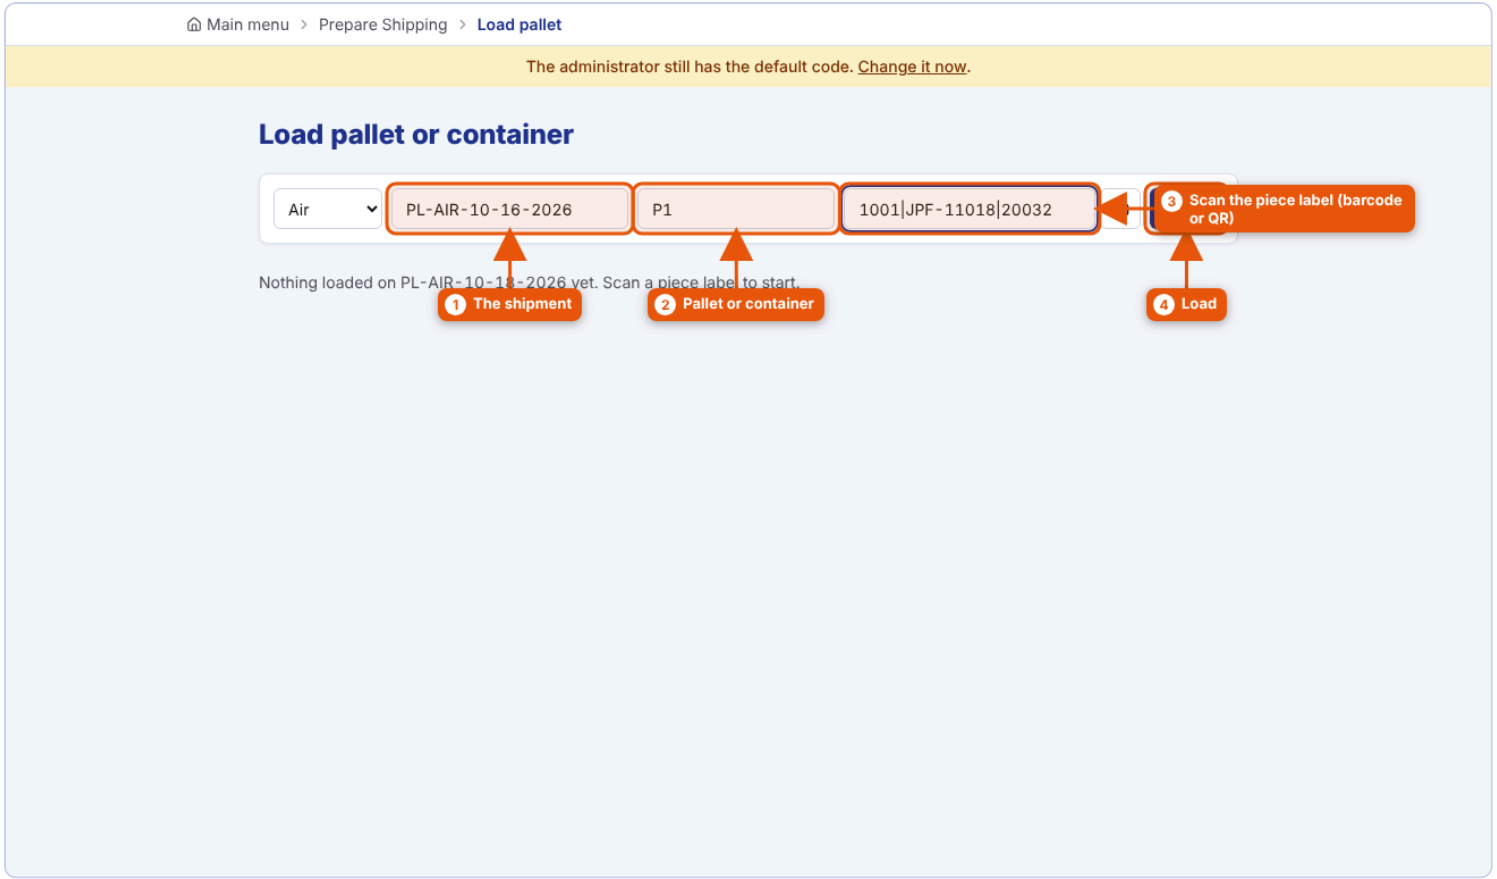

Why: A shipment is a flight (Air, every Friday) or a vessel (every Wednesday).

Prepare Shipping → Shipments. Give the shipment a name (e.g. PL-AIR-10-16-2026), choose Air or Ocean and click "Create shipment".

1. Shipment name (e.g. PL-AIR-date)
2. Air (Friday) or Ocean (Wednesday)
3. Create

M Load pallets

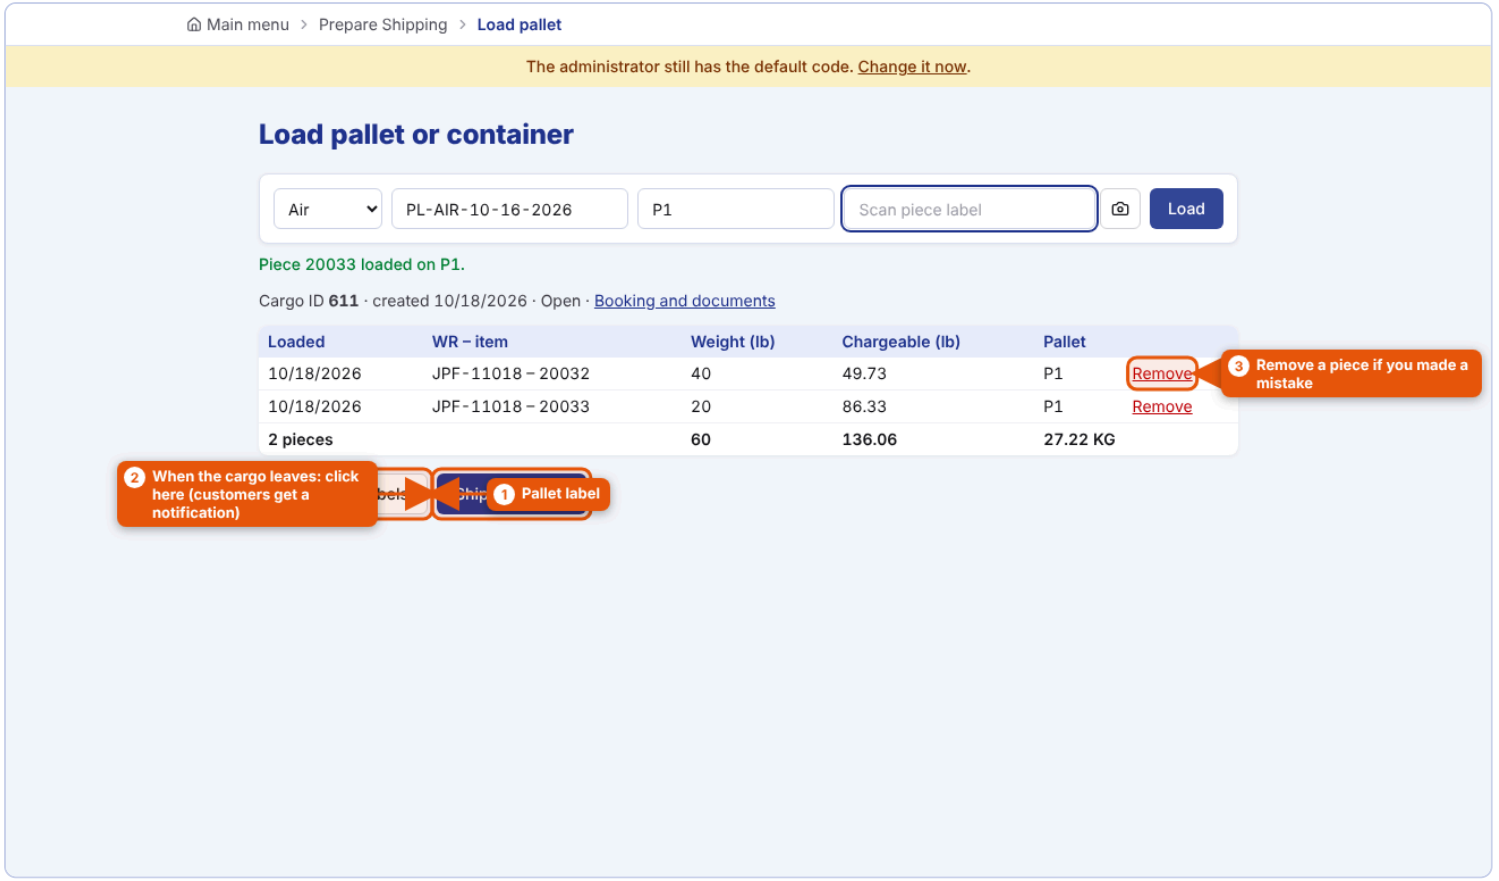

Why: Each piece is scanned onto a pallet or container so you know exactly what is in the cargo.

Prepare Shipping → Load pallet. Choose Air/Ocean, enter the shipment and the pallet (P1), then scan the piece label.

1. The shipment
2. Pallet or container
3. Scan the piece label (barcode or QR)
4. Load

Load pallets

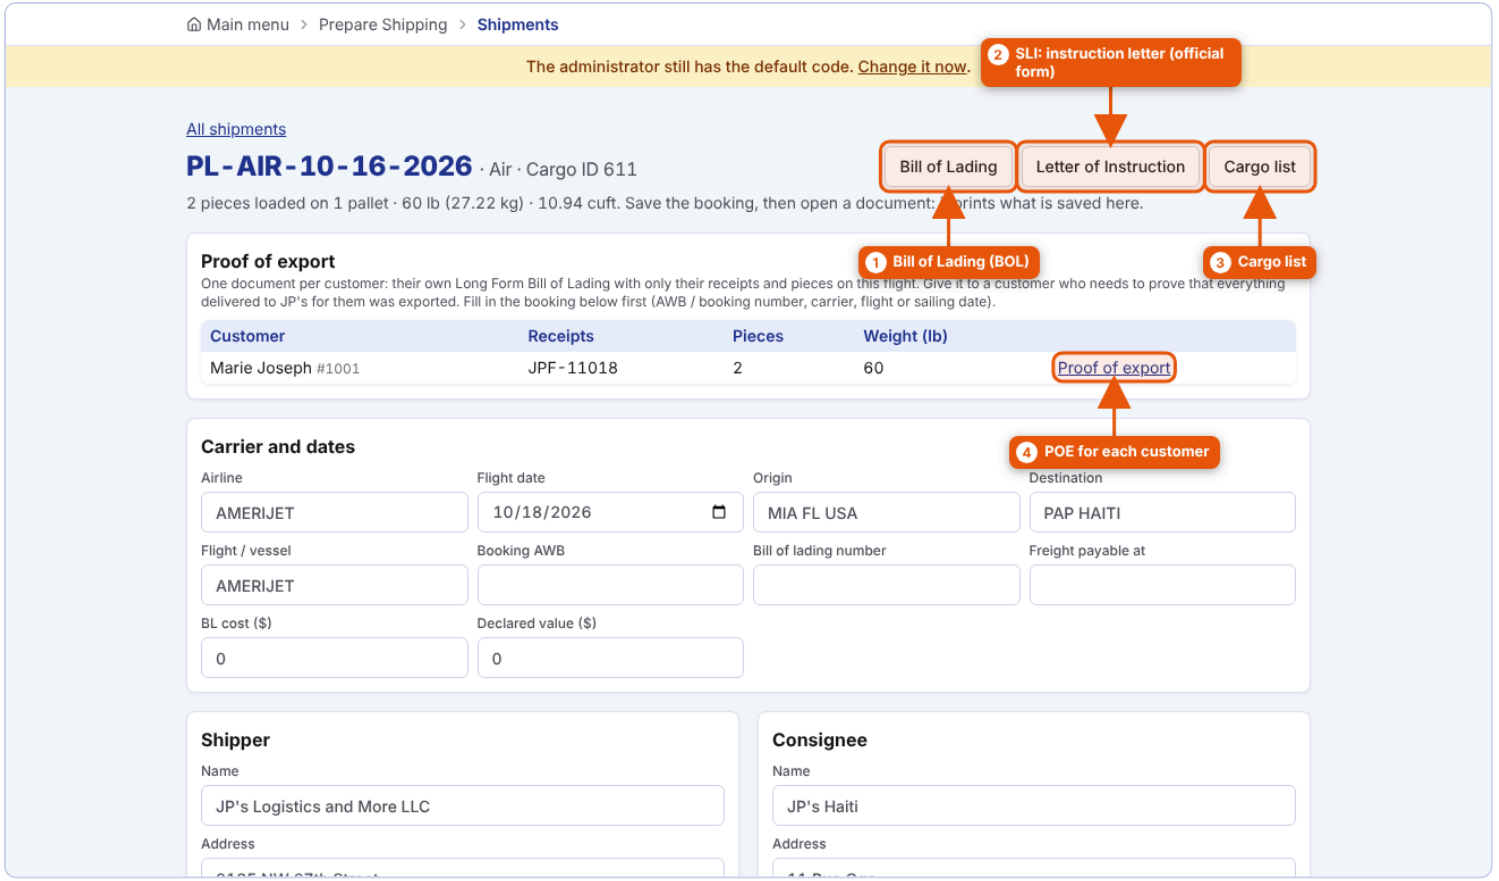

The list of what is loaded, with the total chargeable weight. You can remove a piece (Remove), print the pallet label, or send the cargo (Ship this cargo).

1. Pallet label
2. When the cargo leaves: click here (customers get a notification)
3. Remove a piece if you made a mistake

> **Tip:** An Air piece cannot be loaded onto an Ocean shipment.

N Shipment documents

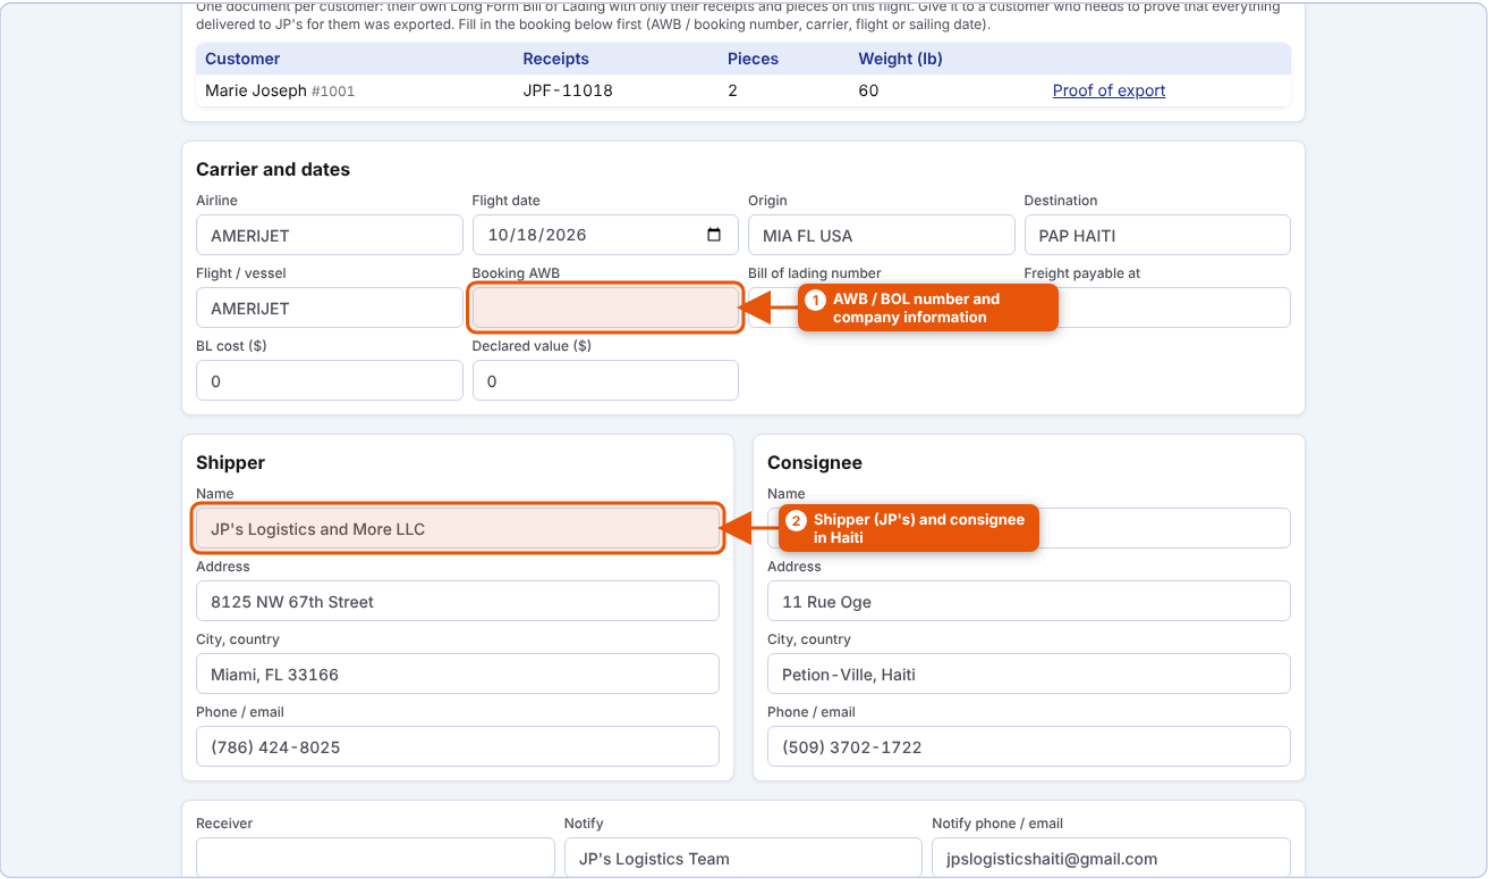

Why: The system prepares the documents from what is loaded.

The shipment page: links to the Bill of Lading, Letter of Instruction (SLI), Cargo list and a "Proof of export" for each customer.

1. Bill of Lading (BOL)
2. SLI: instruction letter (official form)
3. Cargo list
4. POE for each customer

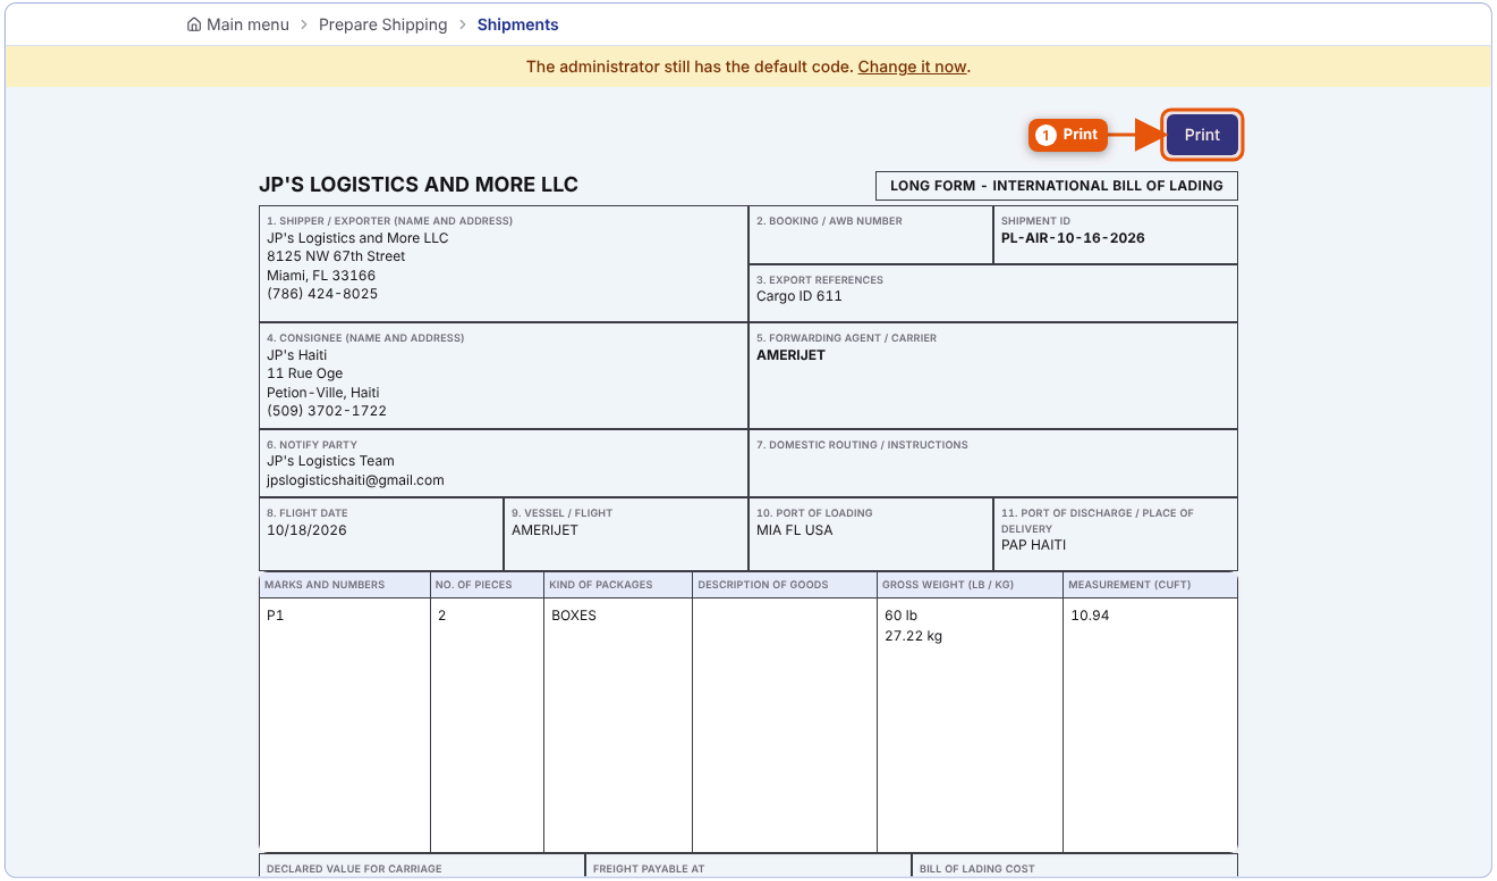

N Shipment documents

Booking: enter the airline/shipping line, AWB/BOL number, shipper and consignee. This goes onto the BOL and the SLI.

1. AWB / BOL number and company information
2. Shipper (JP's) and consignee in Haiti

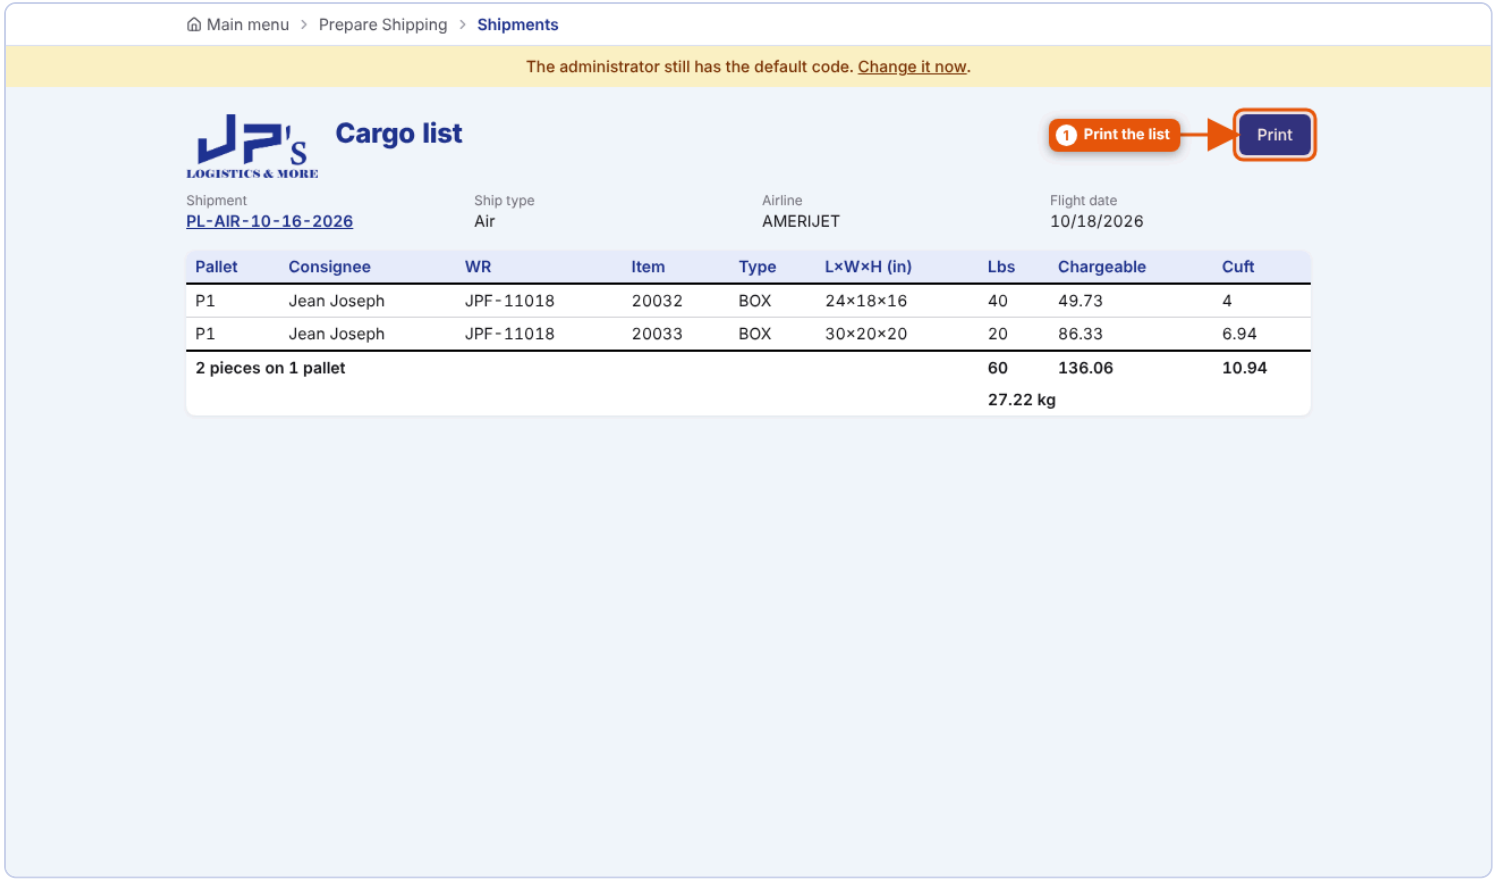

Shipment documents

Bill of Lading (BOL) for printing.

1. Print

N Shipment documents

Cargo list: all pieces with chargeable weight and cubic feet.

1. Print the list

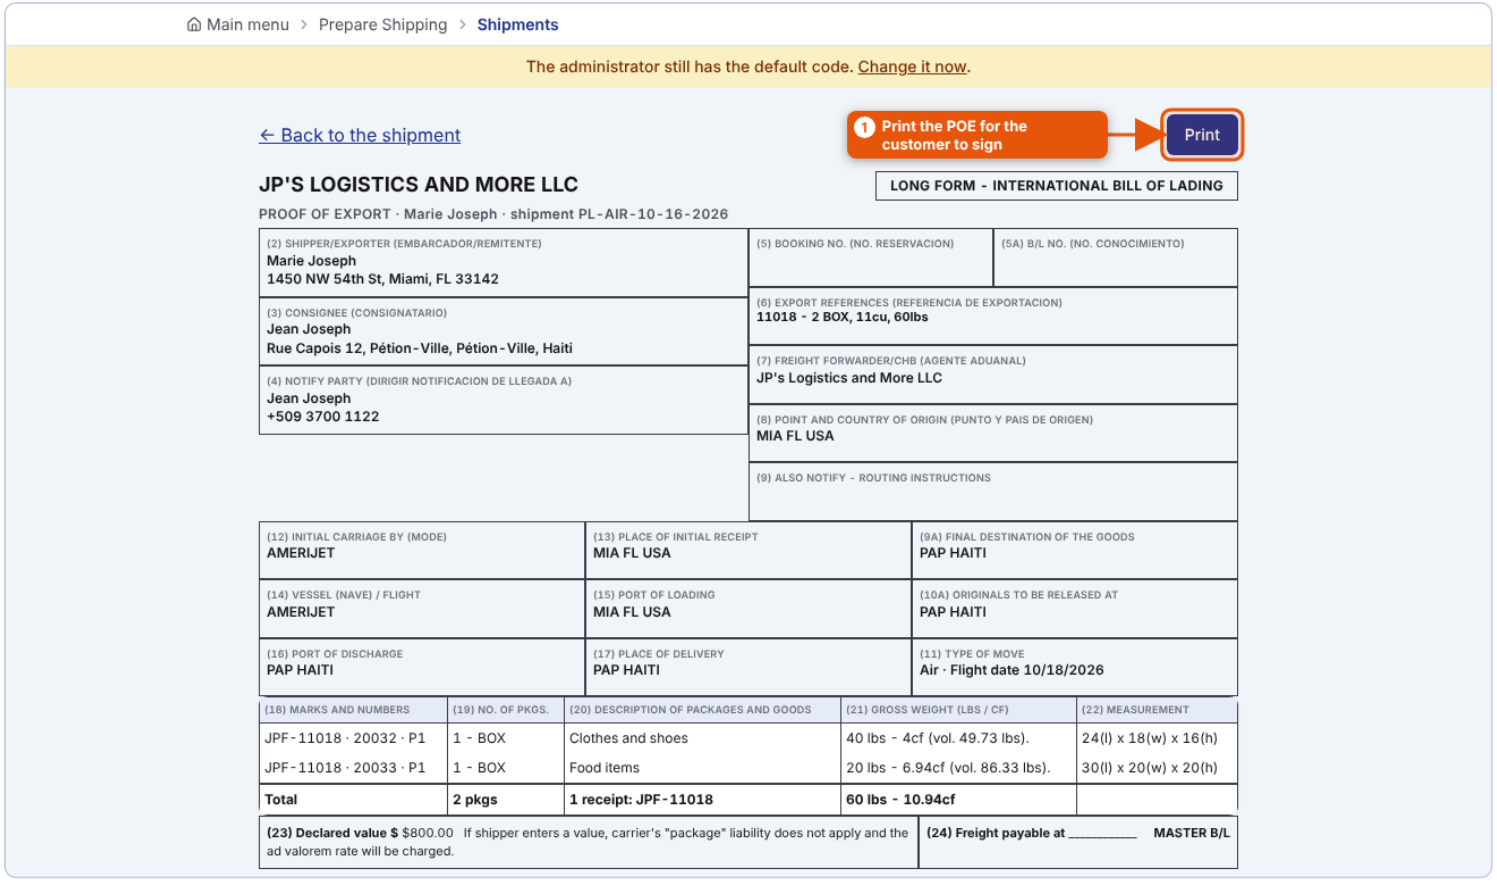

Shipment documents

Shipper's Letter of Instruction (SLI), the official form (revision 09/09/2024).

1. Print the SLI form

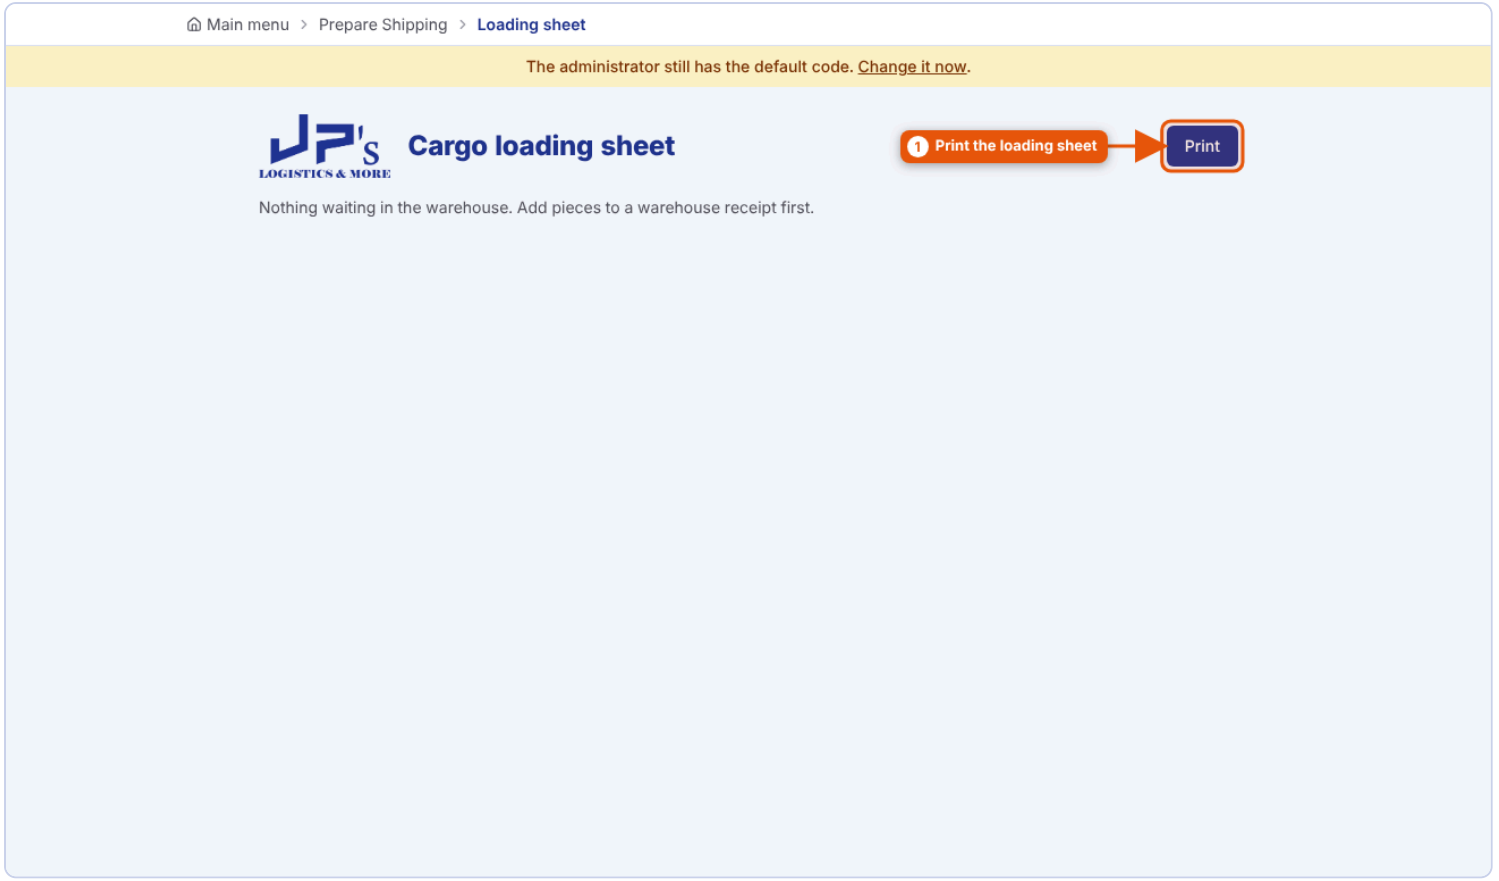

Shipment documents

Proof of Export (POE) for one customer: the document that proves what was shipped.

1. Print the POE for the customer to sign

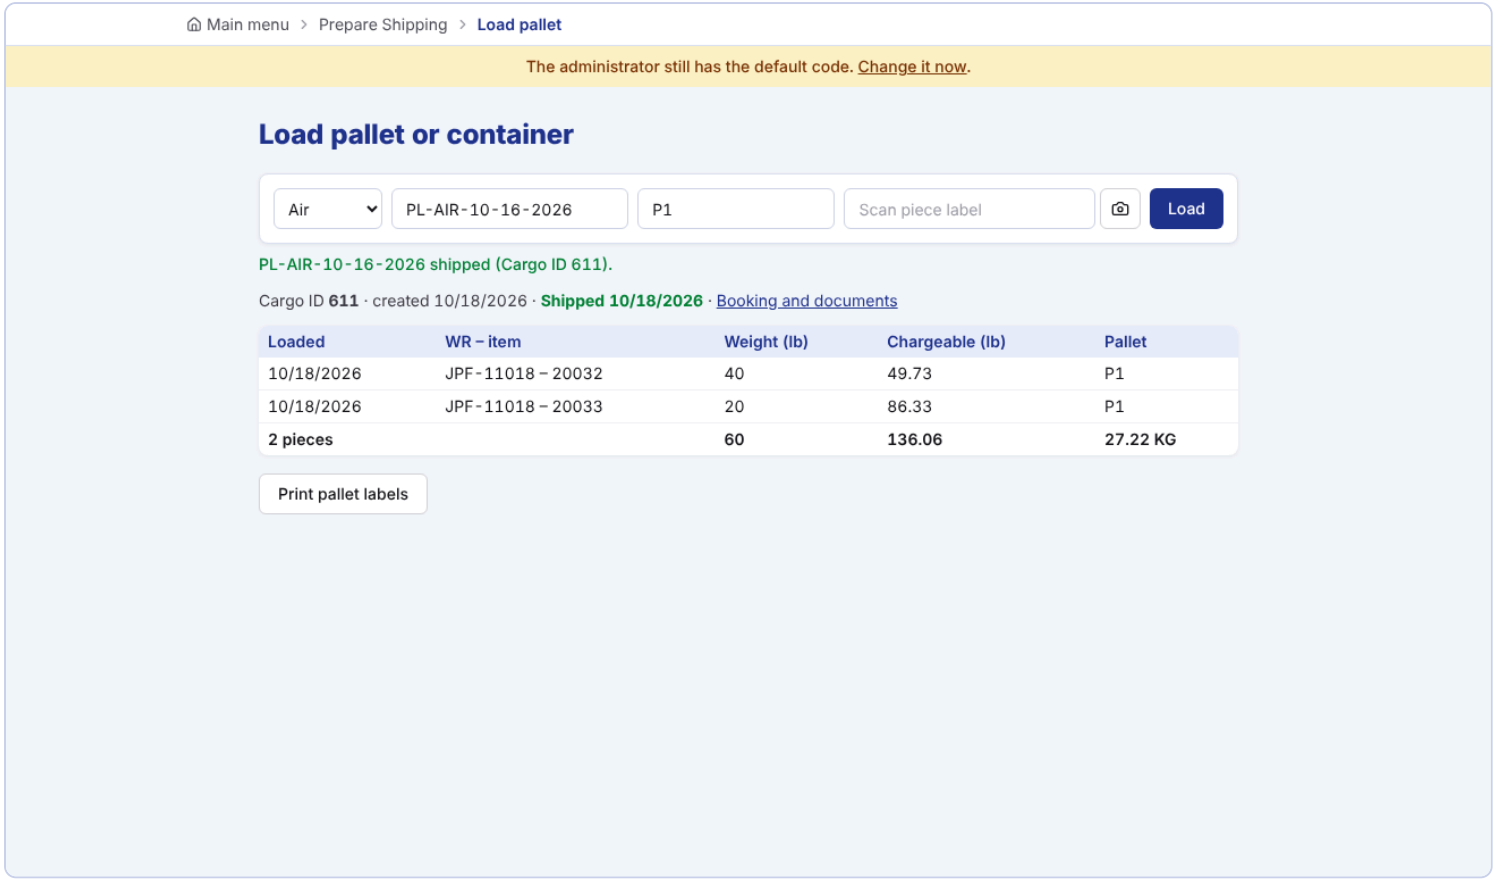

Shipment documents

Loading sheet: what is loaded on each pallet (Prepare Shipping → Loading sheet).

1. Print the loading sheet

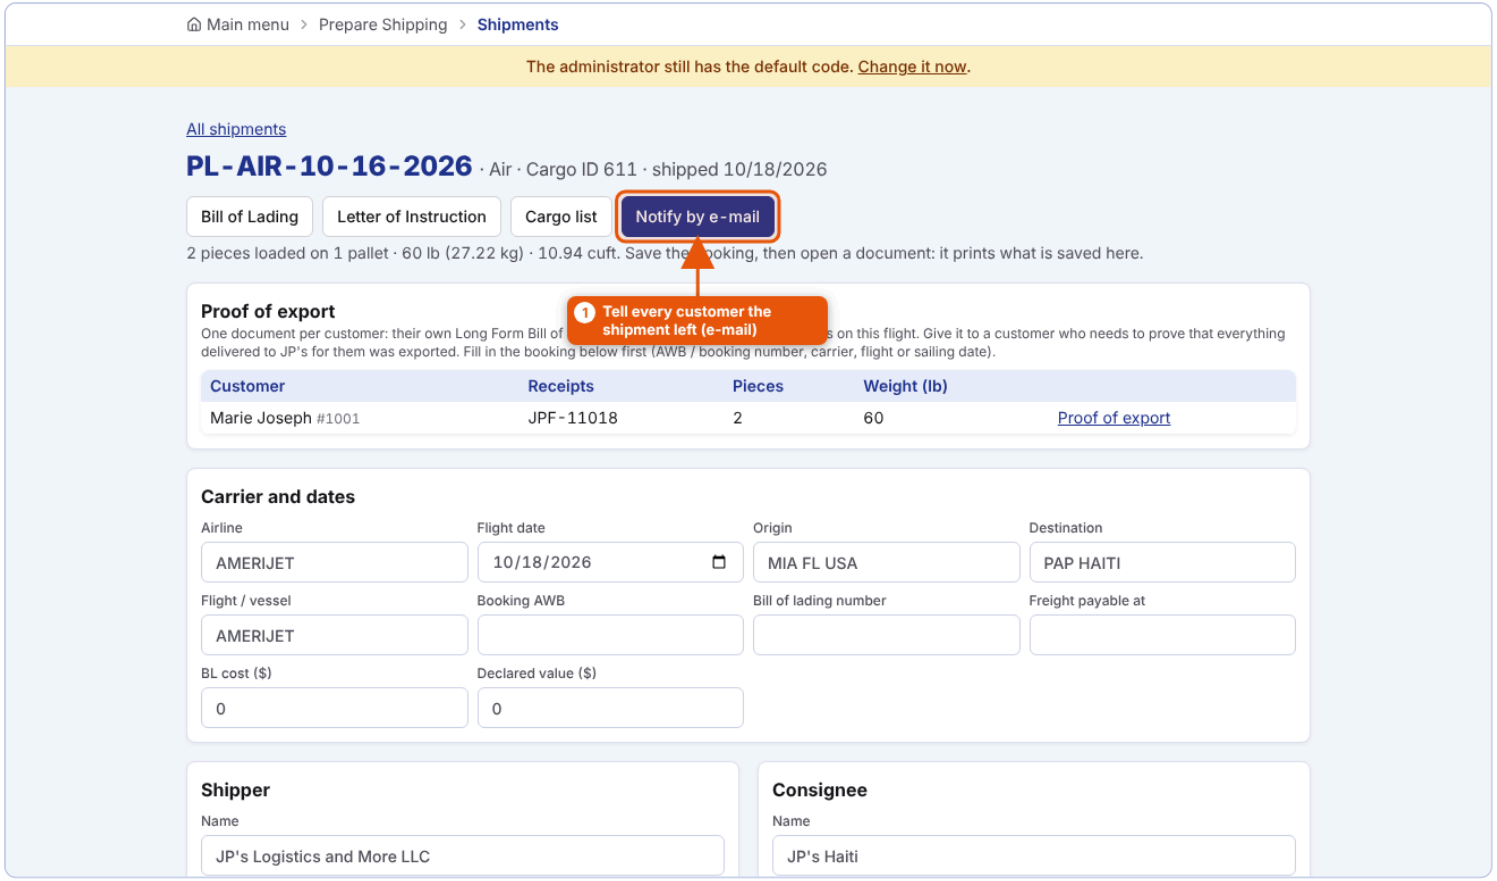

9 Ship the cargo

"Ship this cargo" marks the shipment as shipped. Every package becomes "in transit" on the website, with a push + e-mail for customers (customers without an account get an automatic "your flight has departed" e-mail). The PDF receipt also goes out if it has not gone already. After this, the pieces can no longer be changed.

> **Tip:** Only do this when the cargo has really left.

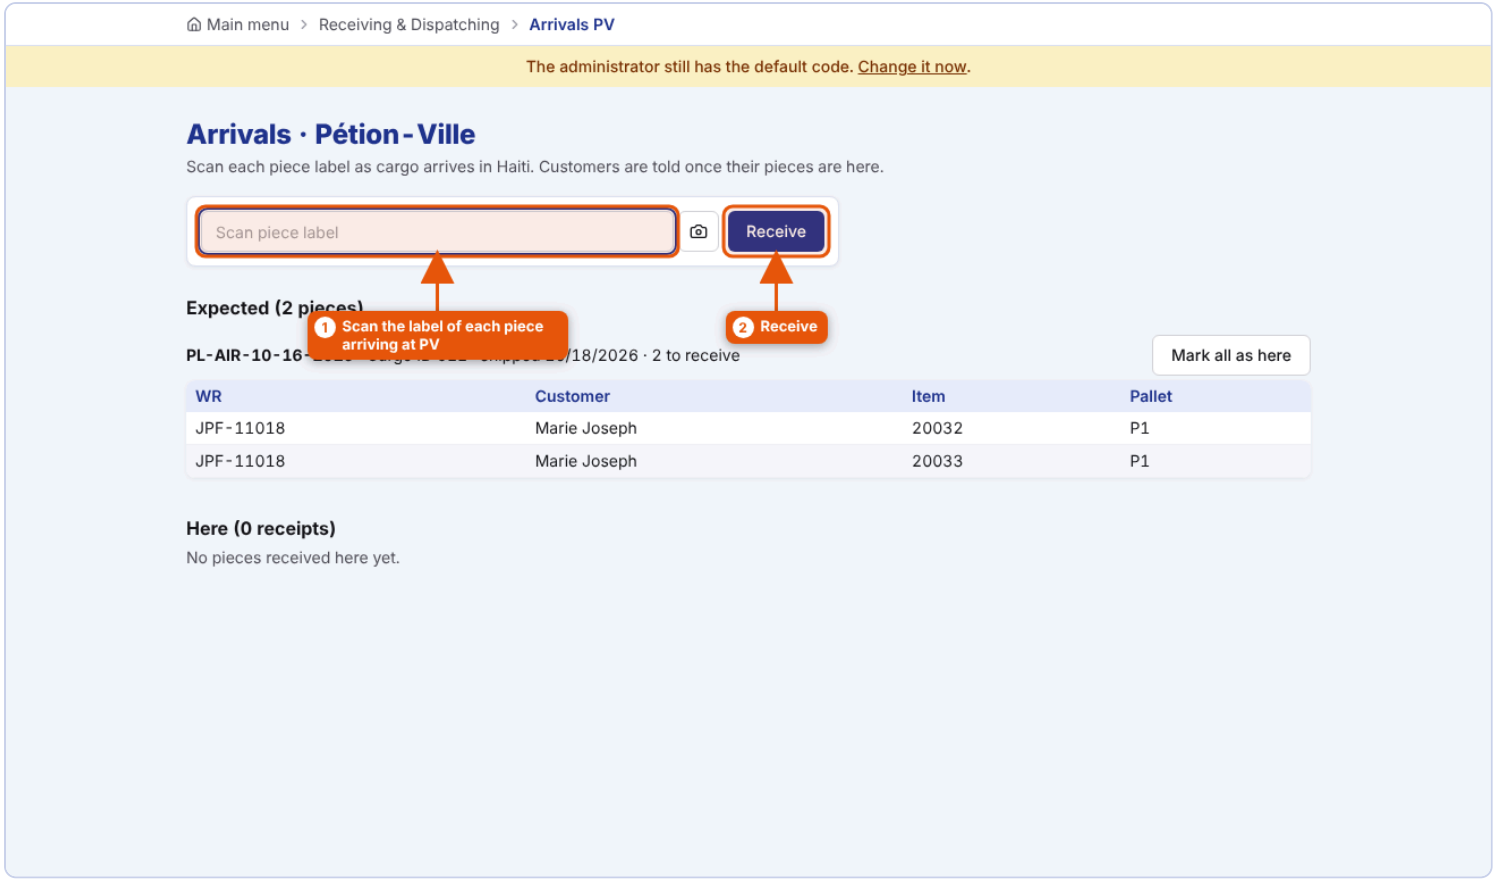

Ship the cargo

On the page of a shipment that has already left: the "Notify by e-mail" button sends a "your shipment left" e-mail to every customer with pieces on it. It also happens by itself when you ship; the button is to send it again.

1. Tell every customer the shipment left (e-mail)

Arrivals PV (Pétion-Ville)

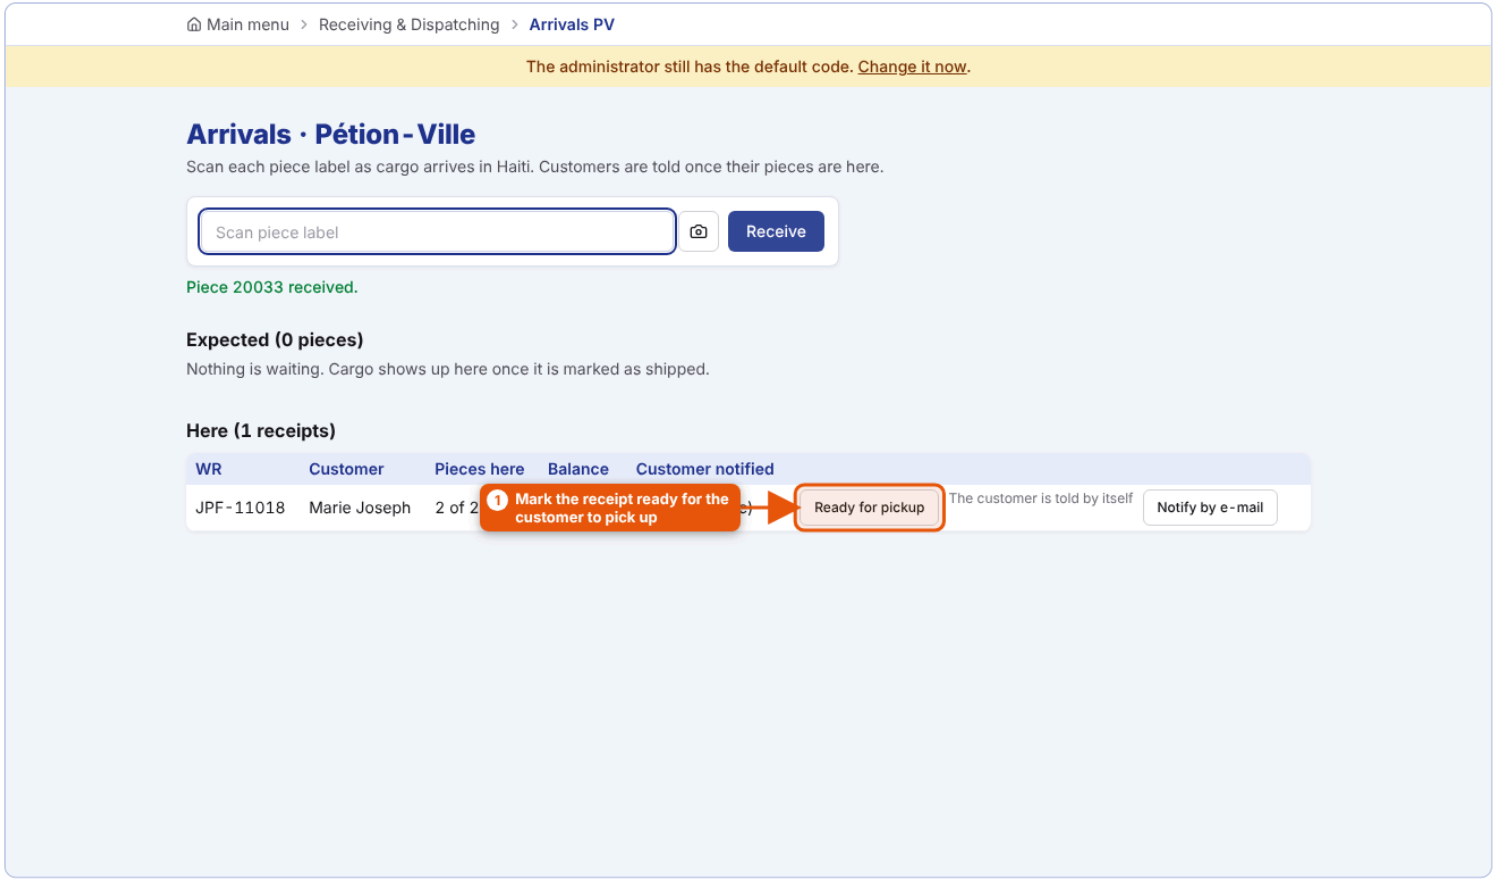

Why: When the cargo reaches Haiti, every piece is scanned again. When ALL the pieces of a receipt have arrived, the customer gets push + e-mail.

Receiving & Dispatching → Arrivals PV. Scan each piece's label. "Expected" shows what is coming.

1. Scan the label of each piece arriving at PV
2. Receive

Arrivals PV (Pétion-Ville)

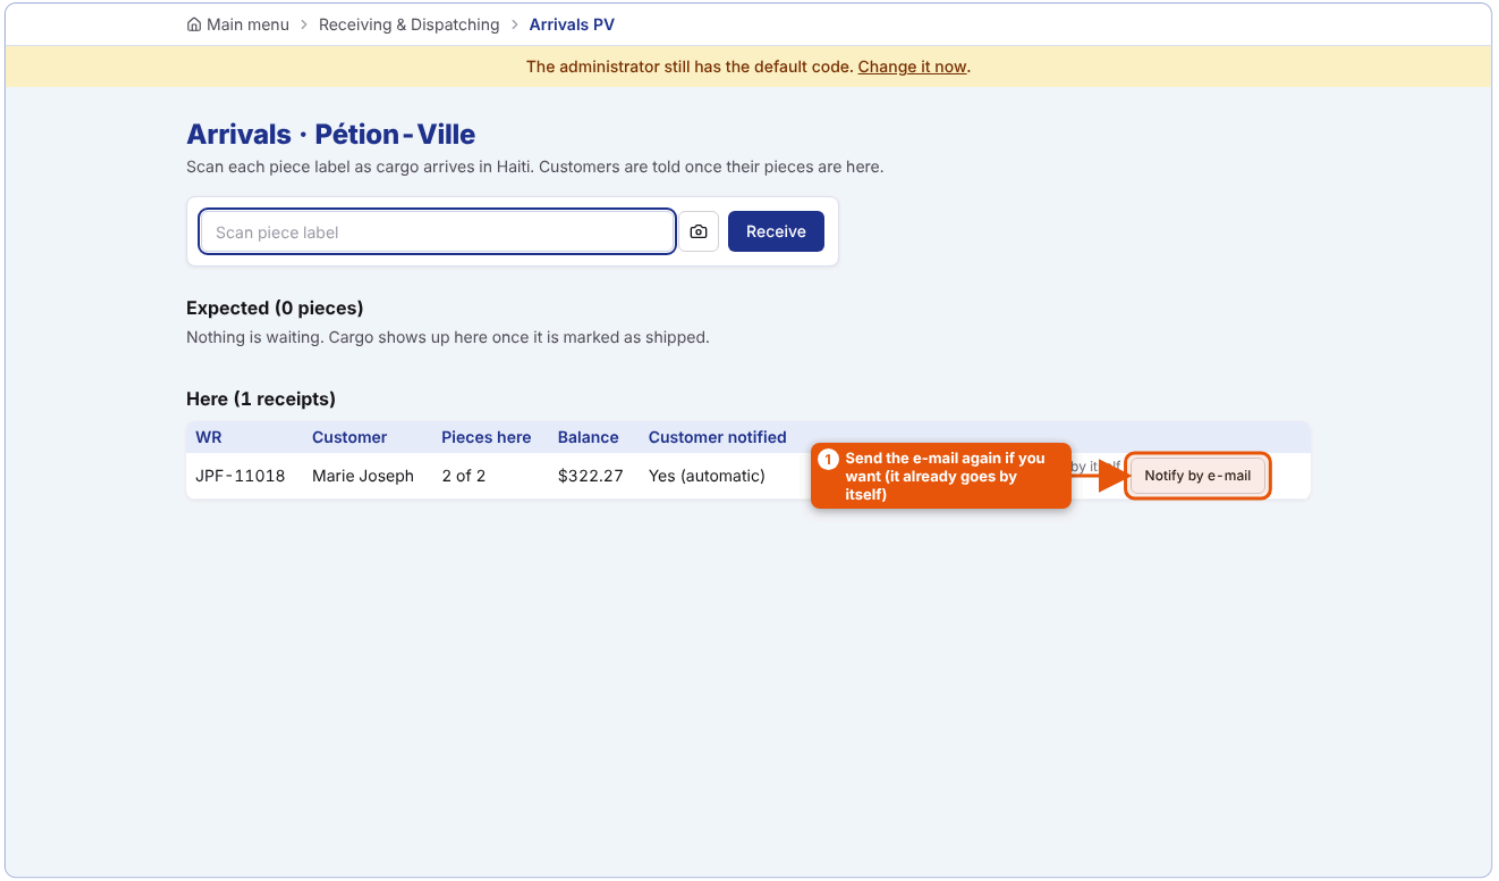

The receipt appears under "Here" (2 of 2 pieces). "Ready for pickup" marks it ready for the customer to come and collect (the website changes to "ready for pickup").

1. Mark the receipt ready for the customer to pick up

> **Tip:** There is no e-mail button here: the customer gets a push + e-mail by themselves when ALL pieces have arrived, and again when you mark "Ready for pickup".

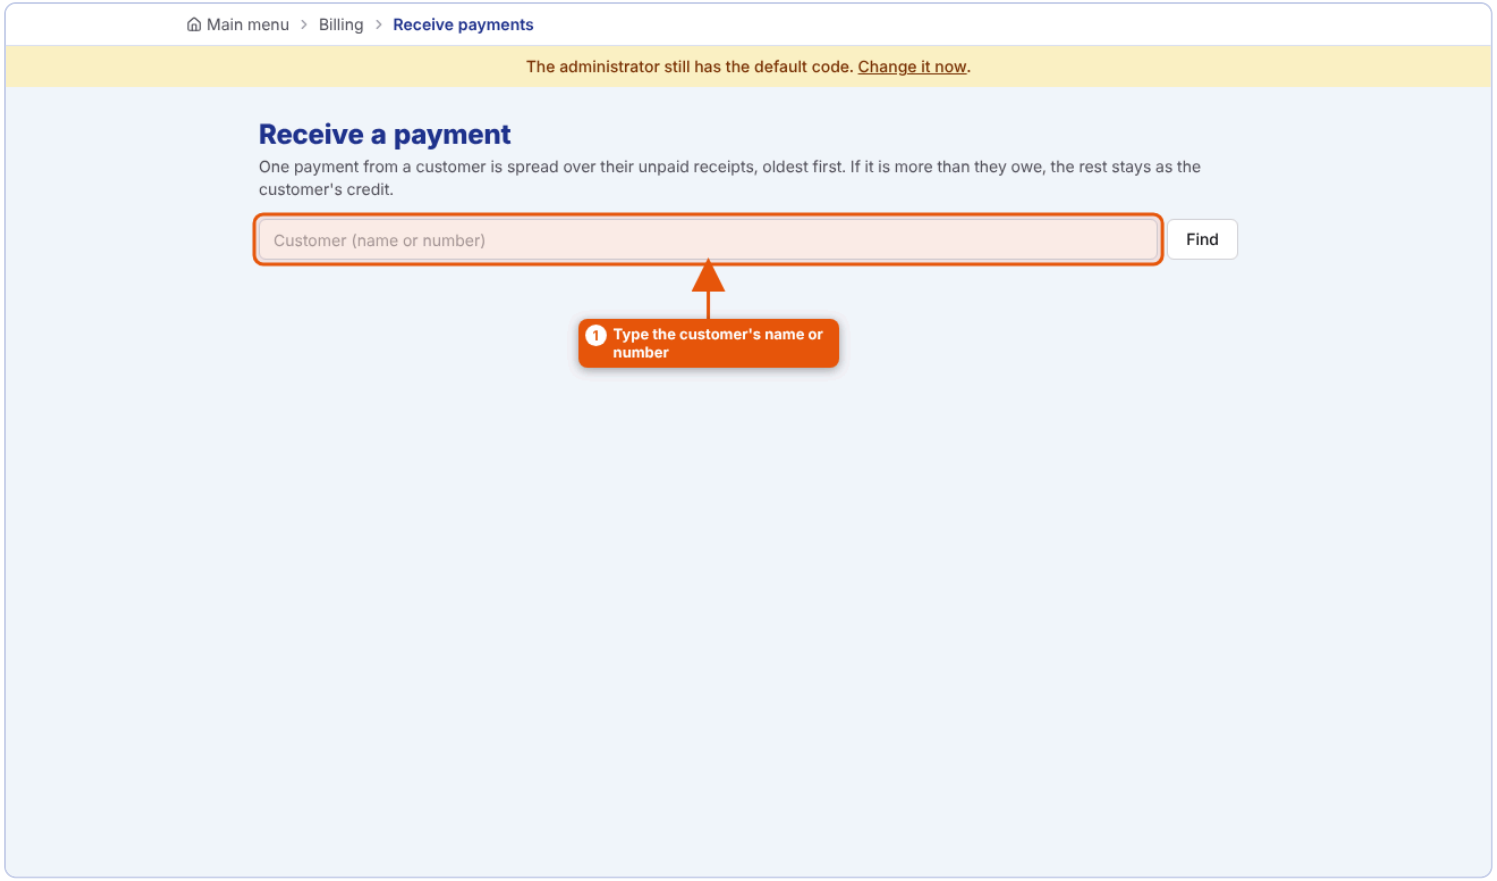

Arrivals PV (Pétion-Ville)

Arrivals PV: each row has a "Notify by e-mail" button that sends the "arrived in Haiti" e-mail (or "ready for pickup" if the receipt is marked ready). The e-mails go by themselves; the button is to send one again.

1. Send the e-mail again if you want (it already goes by itself)

Receive a payment

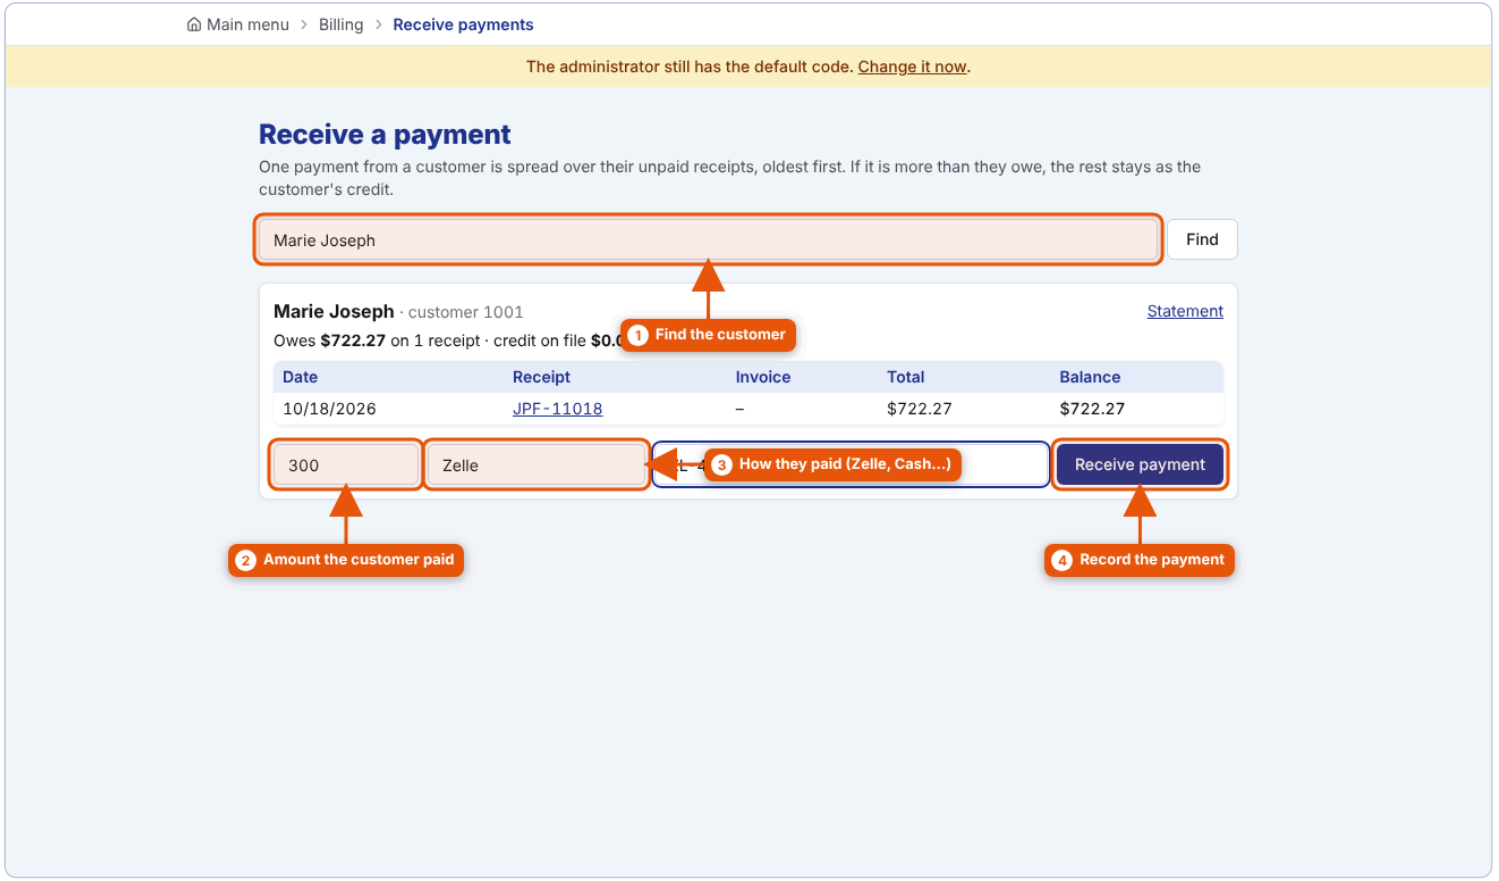

Why: A payment is spread over the receipts with a balance, oldest first. If the customer pays more, the rest becomes credit.

Billing → Receive payments. Search for the customer by name or number.

1. Type the customer's name or number

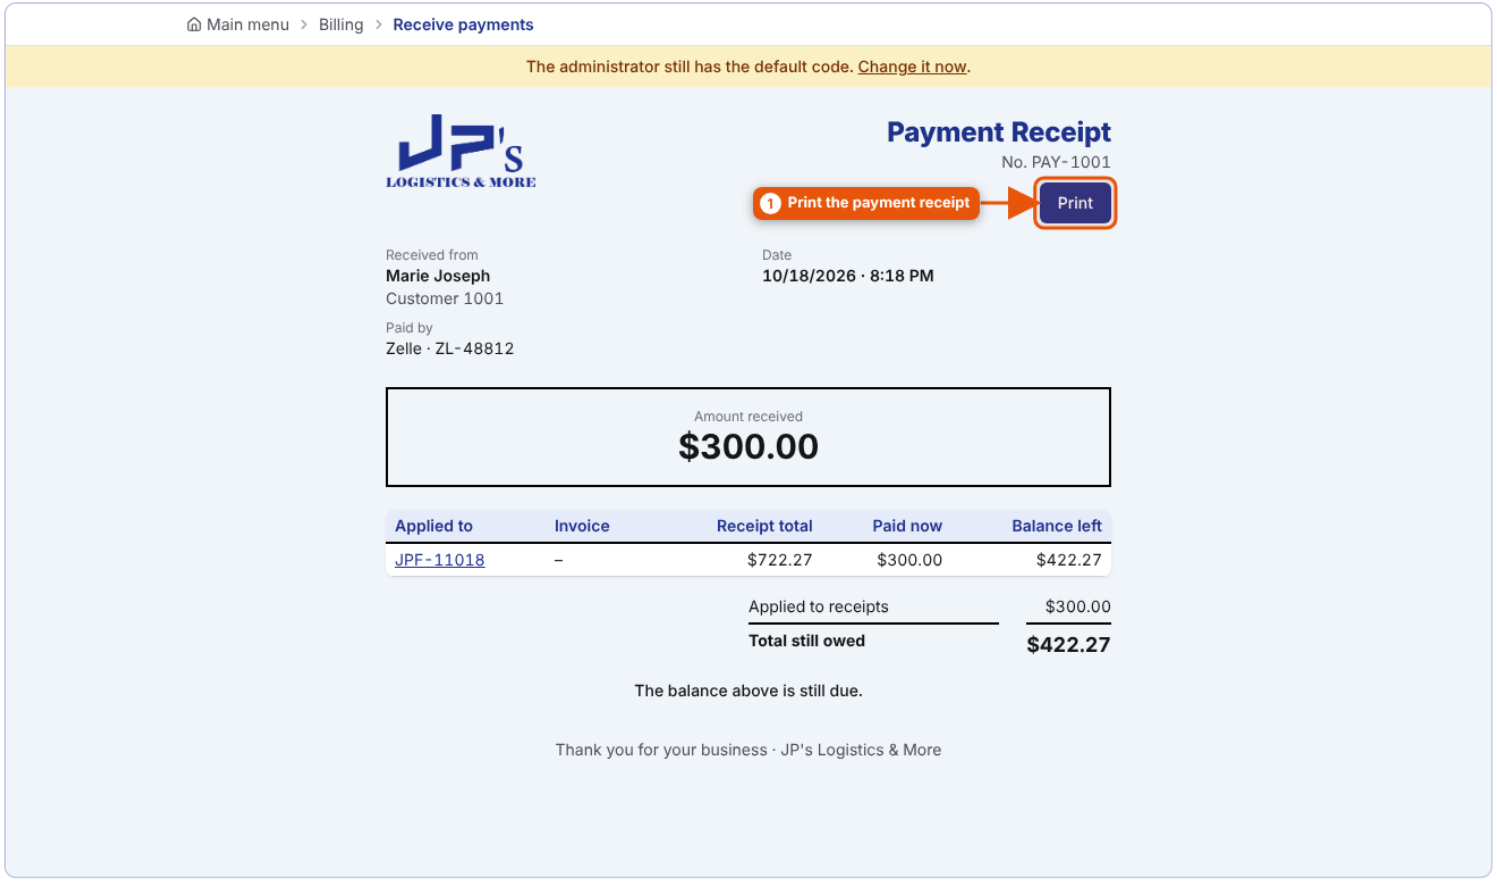

Receive a payment

Check what the customer owes, then enter the amount, payment method (Zelle, Cash, CashApp...) and reference. Click "Receive payment".

1. Find the customer
2. Amount the customer paid
3. How they paid (Zelle, Cash...)
4. Record the payment

Receive a payment

The payment receipt (for printing): amount, which receipt it paid and what balance remains.

1. Print the payment receipt

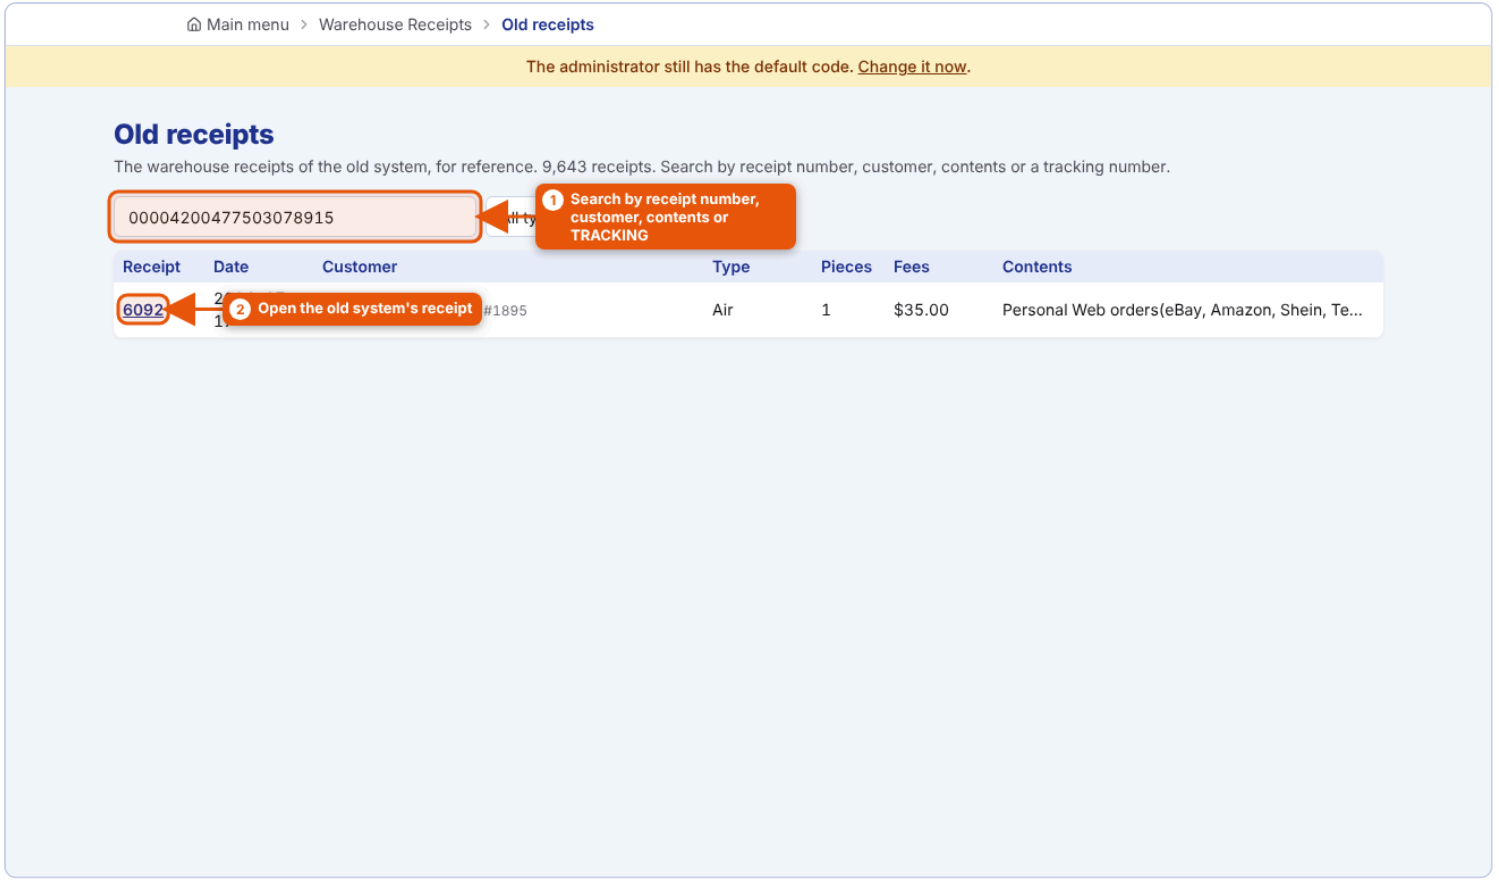

Customer statement

Customer record → Statement. All receipts, payments and balance, with the aging of the debt (0-30, 31-60, 61-90, 90+ days). Example: $722.27 − $300.00 = $422.27.

1. Print the statement

S Old receipts and old shipments

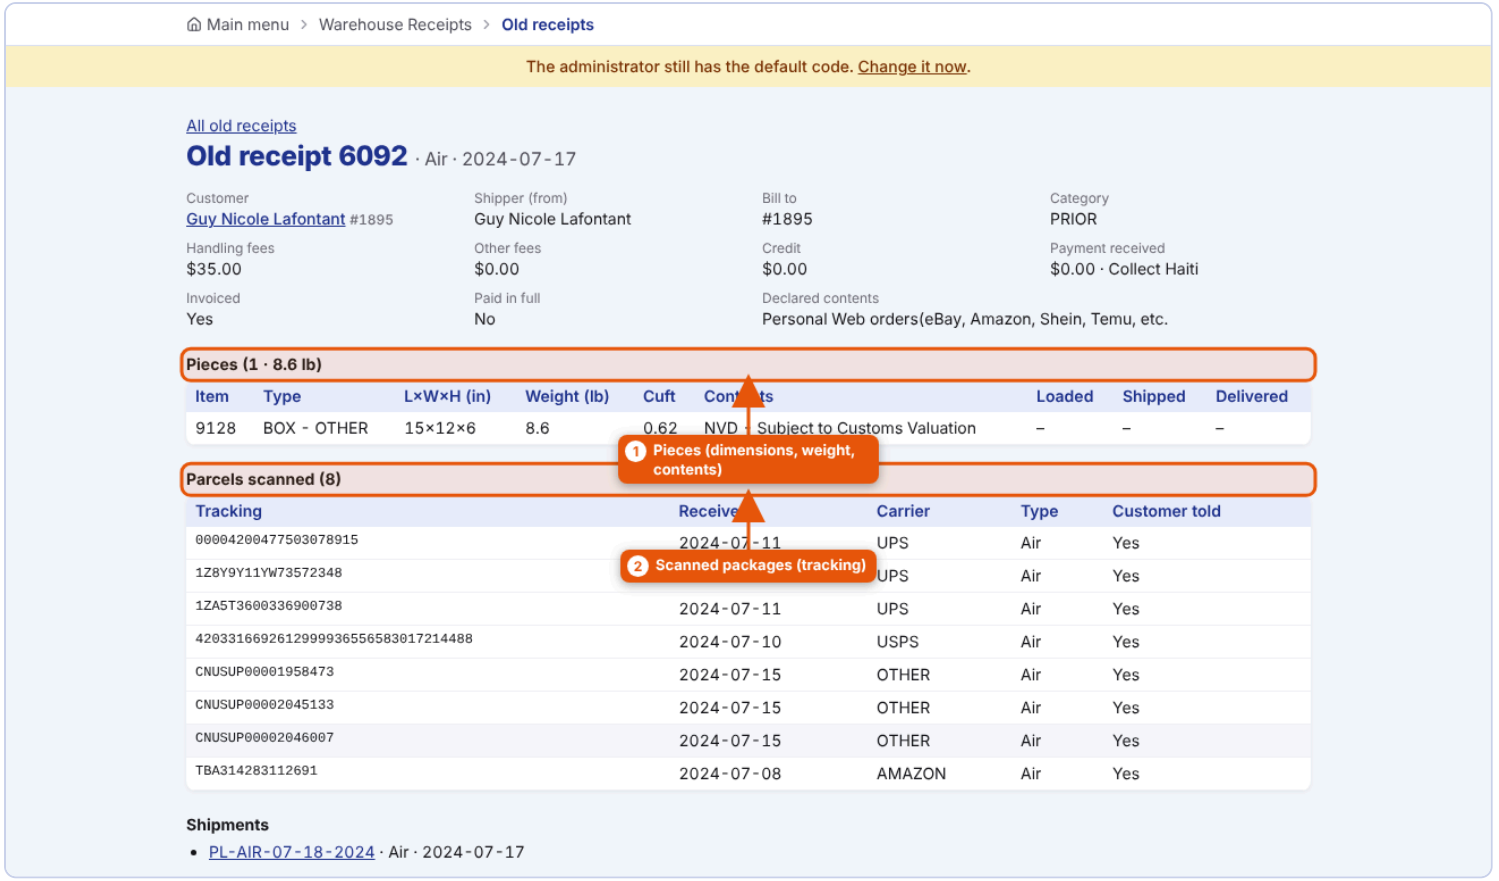

> **Why:** The old system's history (Access) is imported. Useful when a customer asks what happened to an old parcel.

Warehouse Receipts → Old receipts: find an old receipt by number, customer, contents or any TRACKING number (useful when a customer asks what happened to an old package).

1. Search by receipt number, customer, contents or TRACKING
2. Open the old system's receipt

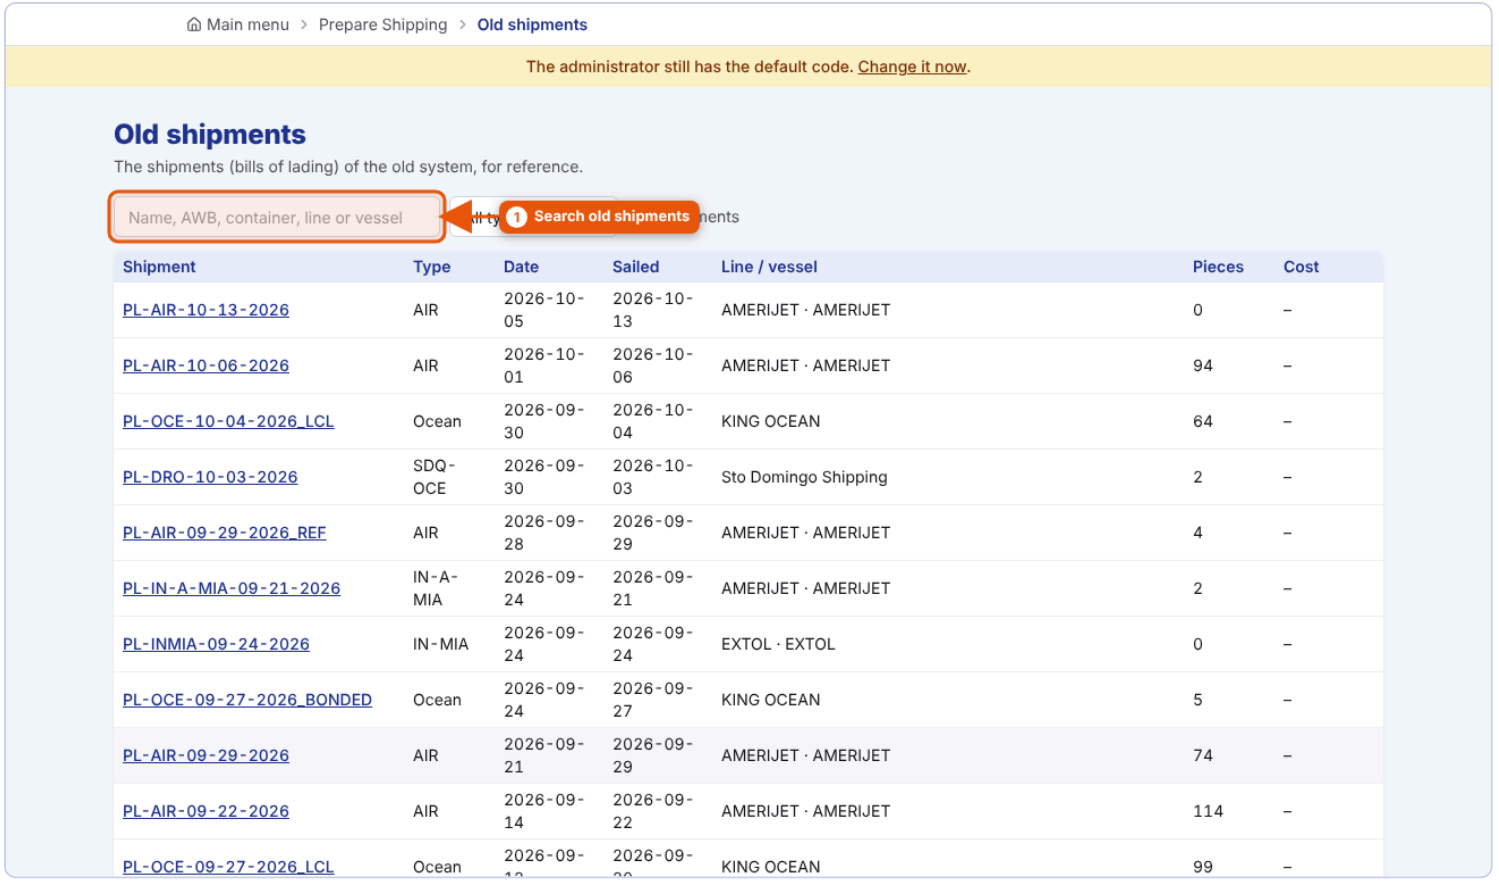

S Old receipts and old shipments

Old receipt details: fees, payments, pieces, scanned packages (tracking, date, carrier), and shipments.

1. Pieces (dimensions, weight, contents)
2. Scanned packages (tracking)

S Old receipts and old shipments

Prepare Shipping → Old shipments: old shipments (BL), lines, vessel/aircraft, container, cost.

1. Search old shipments

Customer website, app and schedule

What the customer does on the website

1. **Create an account** (or receive an invitation by e-mail with a temporary password, which they change under "Changer mon mot de passe").
2. **Track packages:** each package appears with its status: *reçu à Miami → en transit / douane → arrivé en Haïti → prêt pour retrait*.
3. **Announce a package (pre-alert):** before the package arrives, the customer enters the carrier, the carrier's tracking number (not the order number), the store, contents, value, Air or Ocean, and whether they want to wait for other orders (up to 3 departures). They confirm the information.
4. **Request an estimate:** they enter their boxes (dimensions, weight, contents). The request goes to the **Estimate** page of the main system ("Requests from the website"): you set the price, then click "E-mail this estimate" (Air + Ocean) or "Dismiss".
5. **Notifications:** if they installed the app, they receive a push every time the status changes, together with an e-mail.

Schedule and rules

- Air departs every **Friday**, Ocean every **Wednesday**.
- Instructions are needed **2 business days** before departure.
- If the customer does not reply, the package leaves by **Air**.
- "Wait for other orders" holds the package for up to 3 departures.

Installing the system as an app (PWA)

- **Computer (Chrome/Edge):** click "Install the app" at the bottom of the left menu, or the install icon in the address bar.
- **Android (Chrome):** ⋮ menu → "Install app" / "Add to Home screen".
- **iPhone (Safari):** Share button → "Add to Home Screen".
- The app only stores static files; pages and data are never saved on the device. With no internet, it shows "You are offline".

Automatic e-mails: when, what, who

The e-mails below go out by themselves, with no button. To send one again (for example after you change the receipt), there is a "Notify by e-mail" button on the receipt, Arrivals, the shipment and the invoice. Customers who have a website account receive a push + e-mail from the website; other customers receive the e-mail at the address on their record (if it is a real address, not a shared one).

When	What is sent	Sent by
You scan a package for a customer (Received items)	"Your package arrived at the Miami warehouse"	The website (push + e-mail) or the system (if no account)
A piece is saved (Consolidate) · the receipt changes	**The receipt as a PDF**, after ~2 minutes (several pieces = one e-mail)	The main system
You ship the shipment ("Ship this cargo")	"Your package is in transit"; PDF receipt if it has not gone out	The website / the system
All pieces of a receipt arrive in Arrivals PV	"Your package arrived in Haiti"	The website / the system
You mark "Ready for pickup"	"Your receipt is ready for pickup" with the office address	The website / the system
You make an invoice (Billing system)	**The invoice as a PDF**, a few seconds later	The Billing system
You send an estimate (Estimate, website request)	Air + Ocean prices	The website ("E-mail this estimate" button)

- Each e-mail is written in the customer's language (French, English, Spanish) and recorded in the history (Administration → Email customers). The PDF that was sent is saved: you can find it on the receipt / invoice.
- If an e-mail cannot go out (no e-mail, shared e-mail, network), the system records why; for invoices, it retries by itself.
- This requires the website to be connected (SUPABASE_URL, SITE_STAFF_EMAIL, SITE_STAFF_PASSWORD) and the admin-mail function to be up to date (redeploy it).

V How the system calculates the price

Each piece

- **Volume (Air)** = length × width × height (inches) ÷ **139** → pounds.
- **Cubic feet (Ocean)** = length × width × height ÷ **1728**.
- **Air:** billed on the **greater** of actual weight and volume.

Fees

- **Air:** billable pounds × **$4.50** (standard rate; a customer can have their own rate).
- **Ocean:** cubic feet × **$16** + **$45** handling (added automatically).
- **Insurance:** declared value up to $2,213 → **flat $50**; above that → **3.5%** (example $5,000 → $175).
- **Pickup** minimum $20 · **Repacking** minimum $10 · **Storage:** after 30 days, $10 per 30 days on receipts still in Miami (automatic; change it in Fees & rates).
- **Total** = shipping + other fees + insurance − credit (never negative).
- **Credit card (on the balance):** Square invoice 2.9% + $0.30; card present 2.6% + $0.10; manual 2.9% + $0.30 (estimated).

Example 1: Marie Joseph, Air (JPF-11018)

Piece 1: 24×18×16, 40 lb	volume 49.73 lb → billed 49.73
Piece 2: 30×20×20, 20 lb	volume 86.33 lb → billed 86.33
Total pounds: 136.06 × $4.50	**$612.27**
Pickup	$25.00
Handling (added by hand)	$35.00
Insurance ($800 value)	$50.00
Total	**$722.27**
Zelle payment	−$300.00
Balance	**$422.27**

Example 2: Roseline Pierre, Ocean (JPL-11019)

30×20×20 = 12,000 in³ ÷ 1728	6.94 cubic feet
6.94 × $16	$111.04
Ocean handling (automatic)	$45.00
Total	**$156.04**
She pays $200 → credit	$43.96

Common problems and answers

- **"The database is not reachable":** the database cannot be found. The system saves nothing until it is back; tell the administrator (DATABASE_URL).
- **The scanner does not type into the field:** click in the tracking field first; the scanner is a keyboard.
- **"DUPLICATE":** the package was already scanned; no problem.
- **Package has no customer:** go to Pre-alerts (review queue) or click Edit on Received items to assign the customer.
- **A piece will not load onto the shipment:** it must use the same method (Air/Ocean) as the shipment, and it cannot be loaded twice.
- **Cannot switch JPF ↔ JPL:** the pieces are already loaded, or the receipt has an invoice (cancel the invoice first).
- **Payment larger than the balance:** on an invoice the system refuses it; on the customer's "Receive payment", the remainder becomes a credit.
- **Billing does not show a change:** wait 5 seconds and refresh the page.
- **E-mail did not go out:** check Administration → Email customers (the history says why). Customers with a shared or blocked e-mail do not receive it.
- **Forgot your code:** the administrator can set a new code in Users & access.
- **Numbers look wrong:** check the rate per pound/cubic foot on the receipt (Receipt details) and the declared value/insurance.
- **Help:** the Activity log shows who did what and when.
