Short guide: several receipts on one cargo

JP's Logistics & More

Create the cargo, put the receipts on it, and ship it

For the people who prepare the shipments

Version November 6, 2026 · The examples use a simulated customer (Marie Joseph #1001): the data is a test.

Contents

A Create the cargo

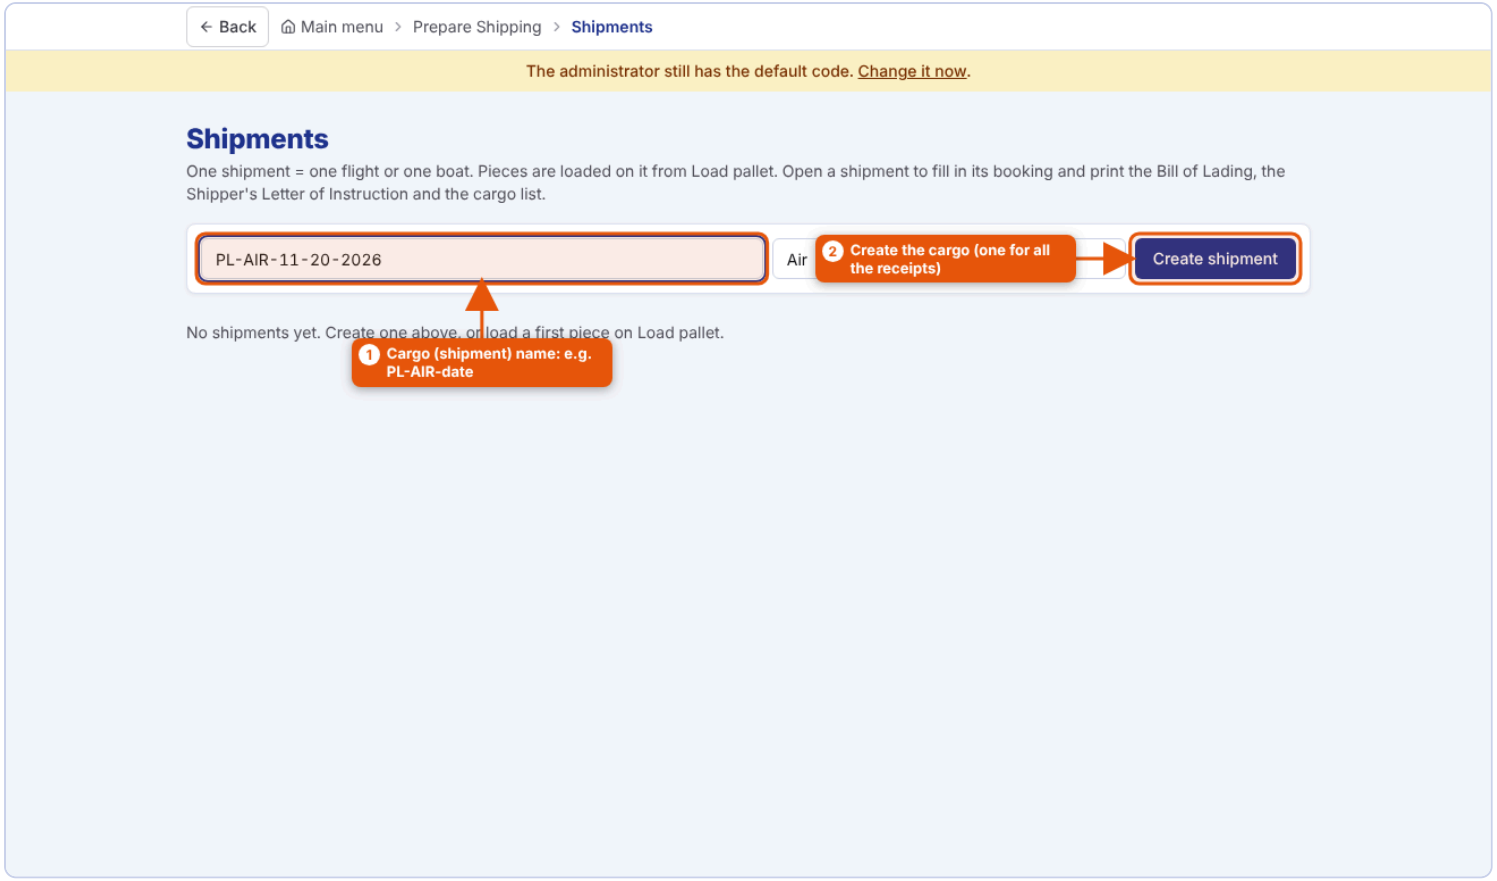

B Put several receipts on the cargo

C From the receipt page

D Ship the cargo

E Rules and error messages

A Create the cargo

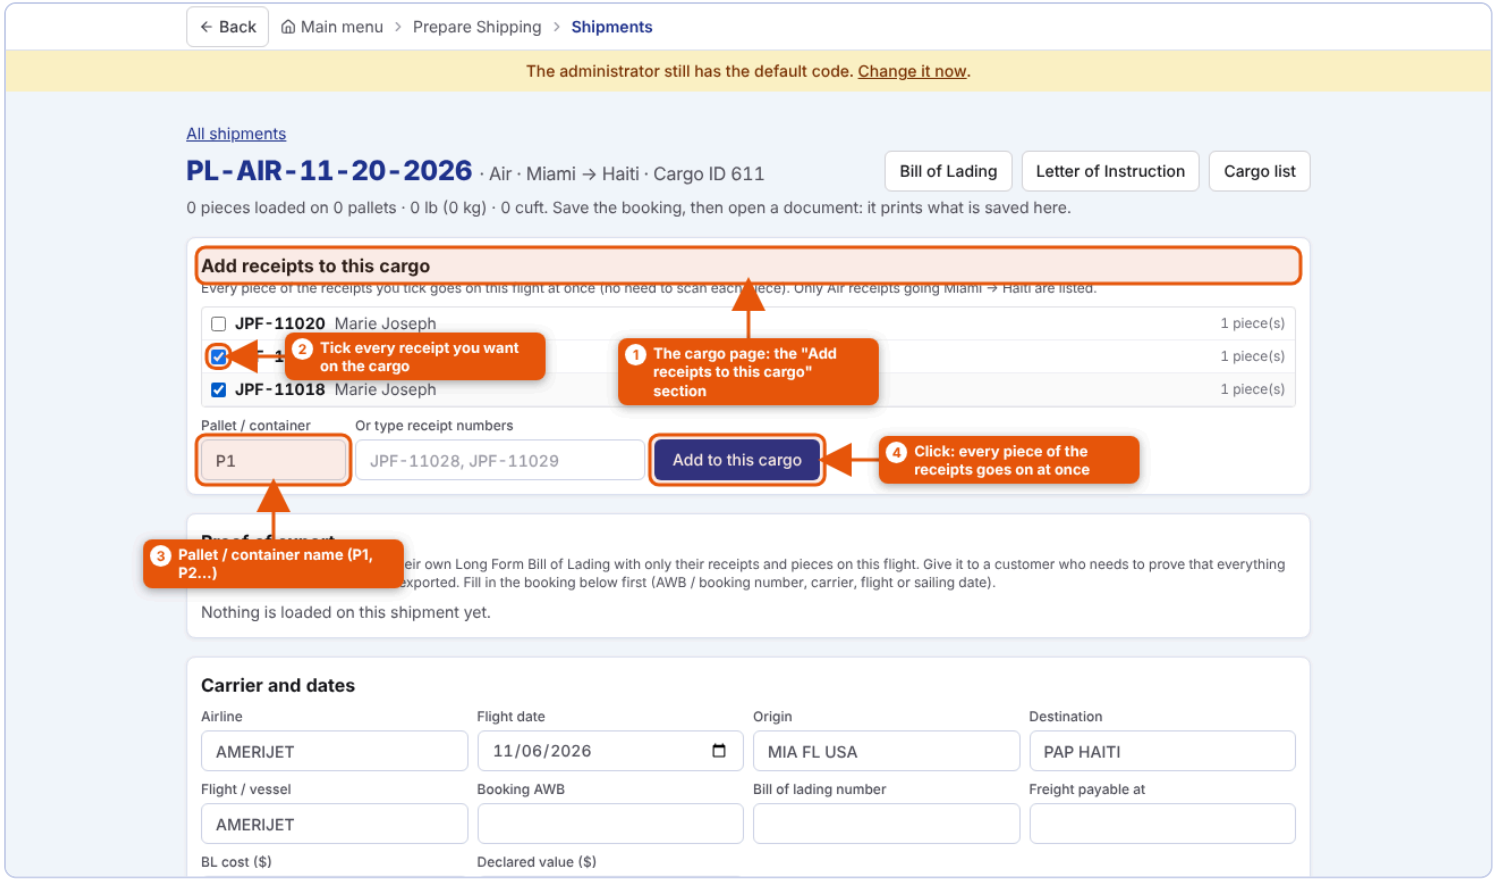

Why: One cargo (shipment) for all the receipts.

Menu → Prepare shipping → Shipments. Type the cargo name (for example PL-AIR-date) and click "Create shipment". A shipment and a cargo are the same thing: there is one Cargo ID.

1. Cargo (shipment) name: e.g. PL-AIR-date
2. Create the cargo (one for all the receipts)

Tip: One shipment = one cargo. To split the pieces, use several pallets (P1, P2…) inside the same cargo.

B Put several receipts on the cargo

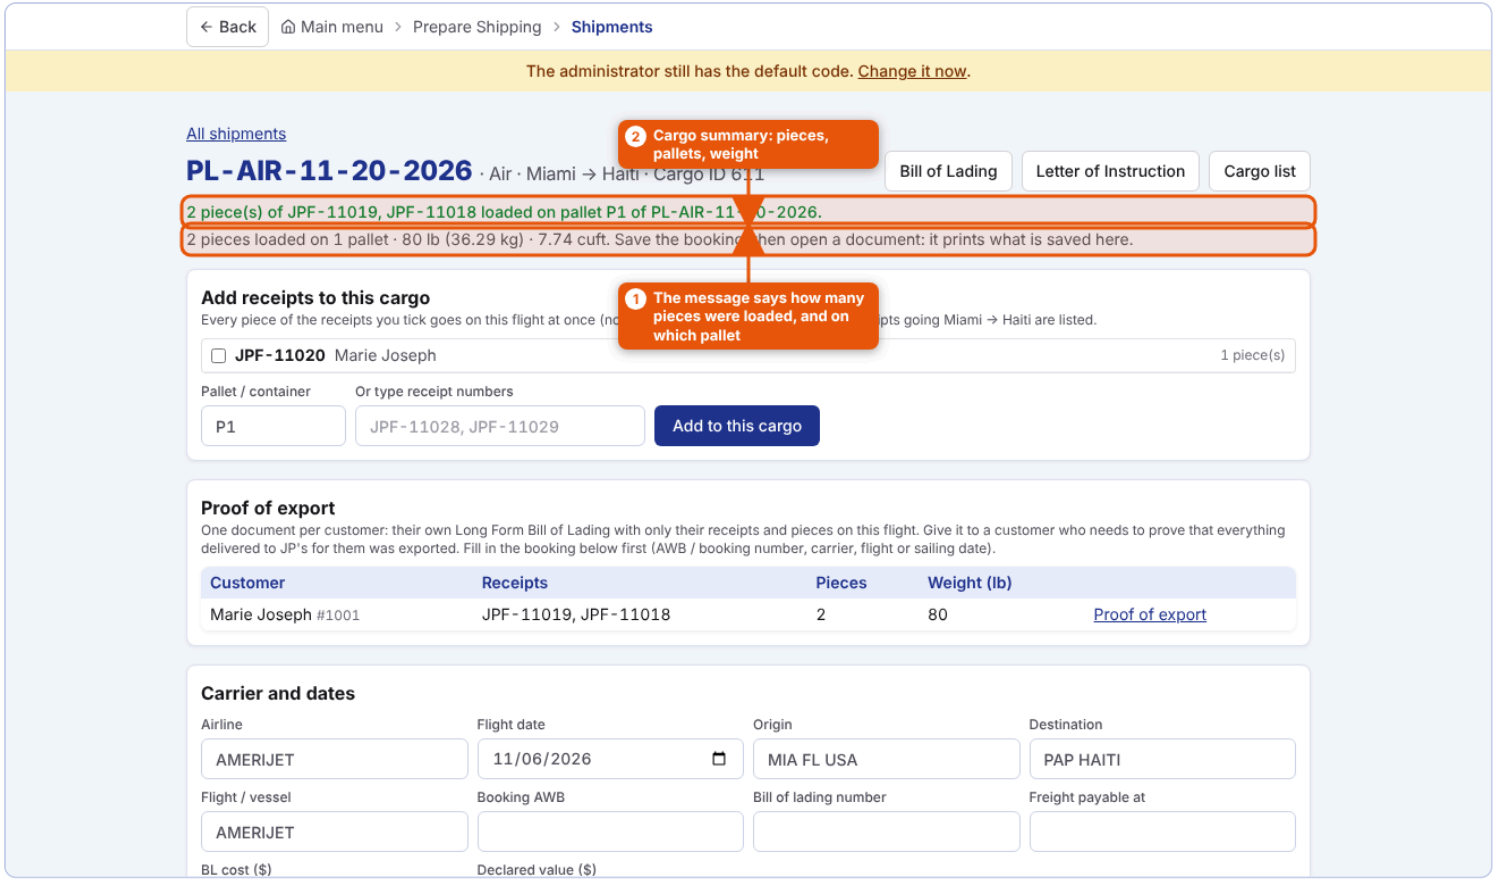

Why: Every piece of the receipts goes on at once.

Open the cargo. In the "Add receipts to this cargo" section, tick each receipt you want (the list only shows receipts of the same type Air/Ocean and direction that are not loaded yet). Enter the pallet name and click "Add to this cargo". You can also type the numbers: JPF-11028, JPF-11029.

1. The cargo page: the "Add receipts to this cargo" section
2. Tick every receipt you want on the cargo
3. Pallet / container name (P1, P2...)
4. Click: every piece of the receipts goes on at once

B Put several receipts on the cargo

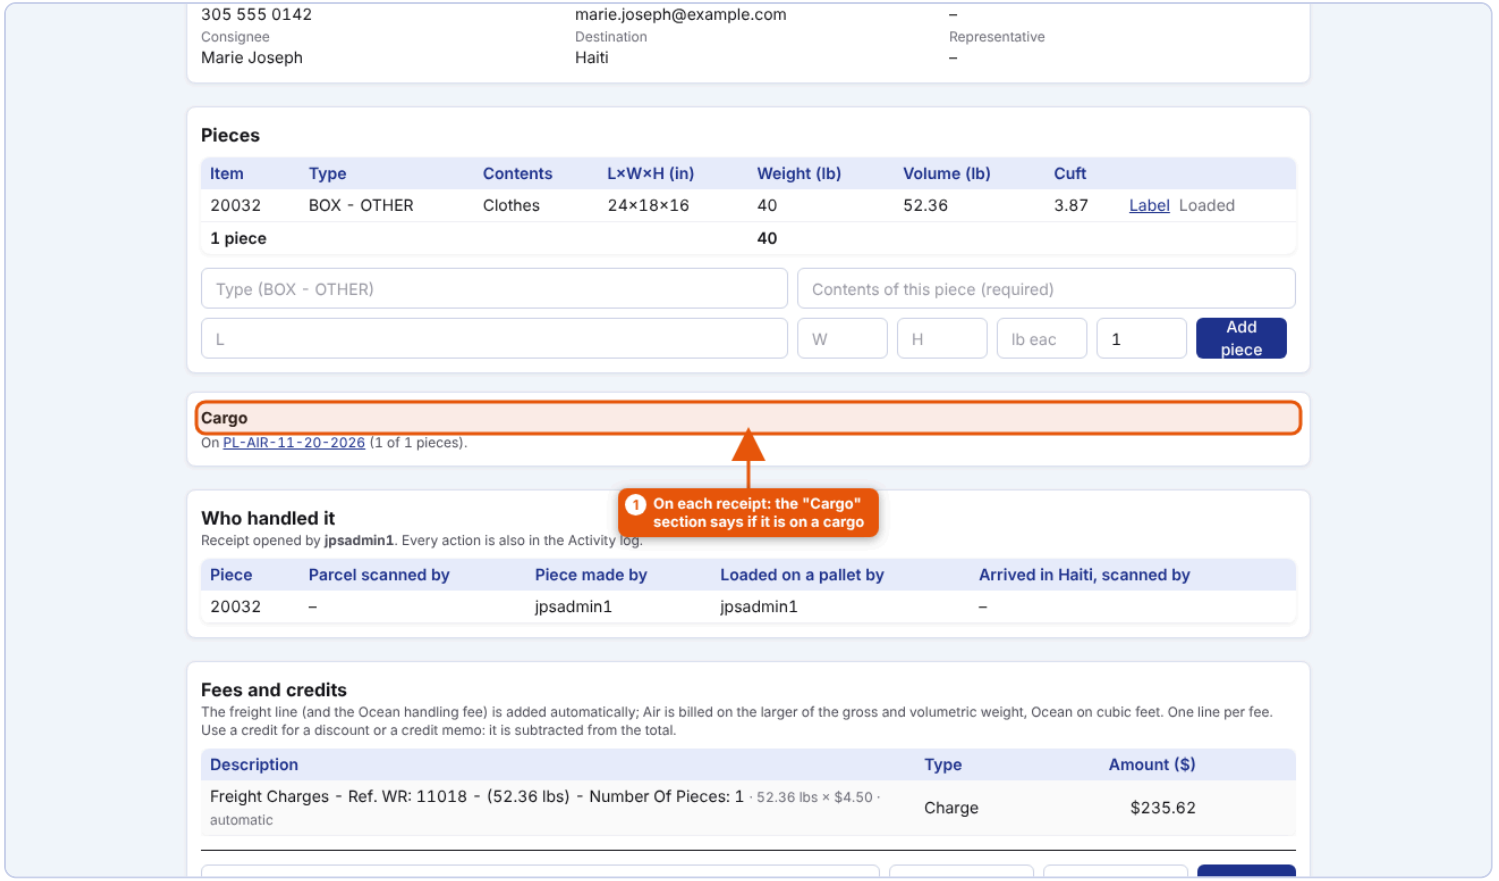

The green message says how many pieces were loaded and on which pallet. The cargo summary and the "Proof of export" table show the pieces, pallets, weight and customers.

1. The message says how many pieces were loaded, and on which pallet
2. Cargo summary: pieces, pallets, weight

> **Tip:** No need to scan the pieces one by one.

C From the receipt page

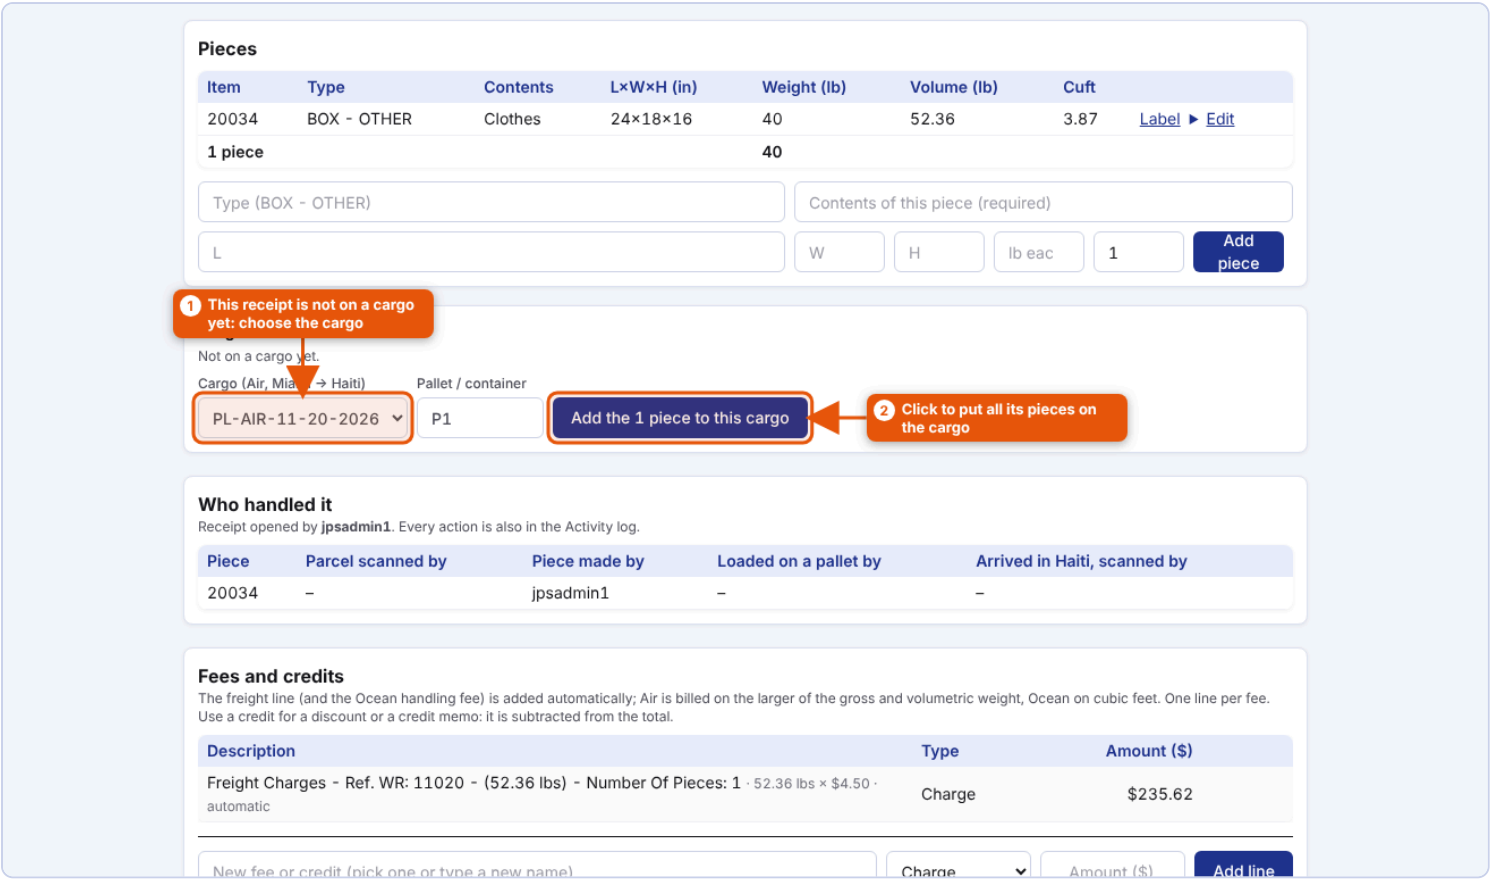

> **Why:** For one receipt, or to check where it is.

On each receipt, the "Cargo" section says whether it is on a cargo (which one) and how many pieces are loaded.

1. On each receipt: the "Cargo" section says if it is on a cargo

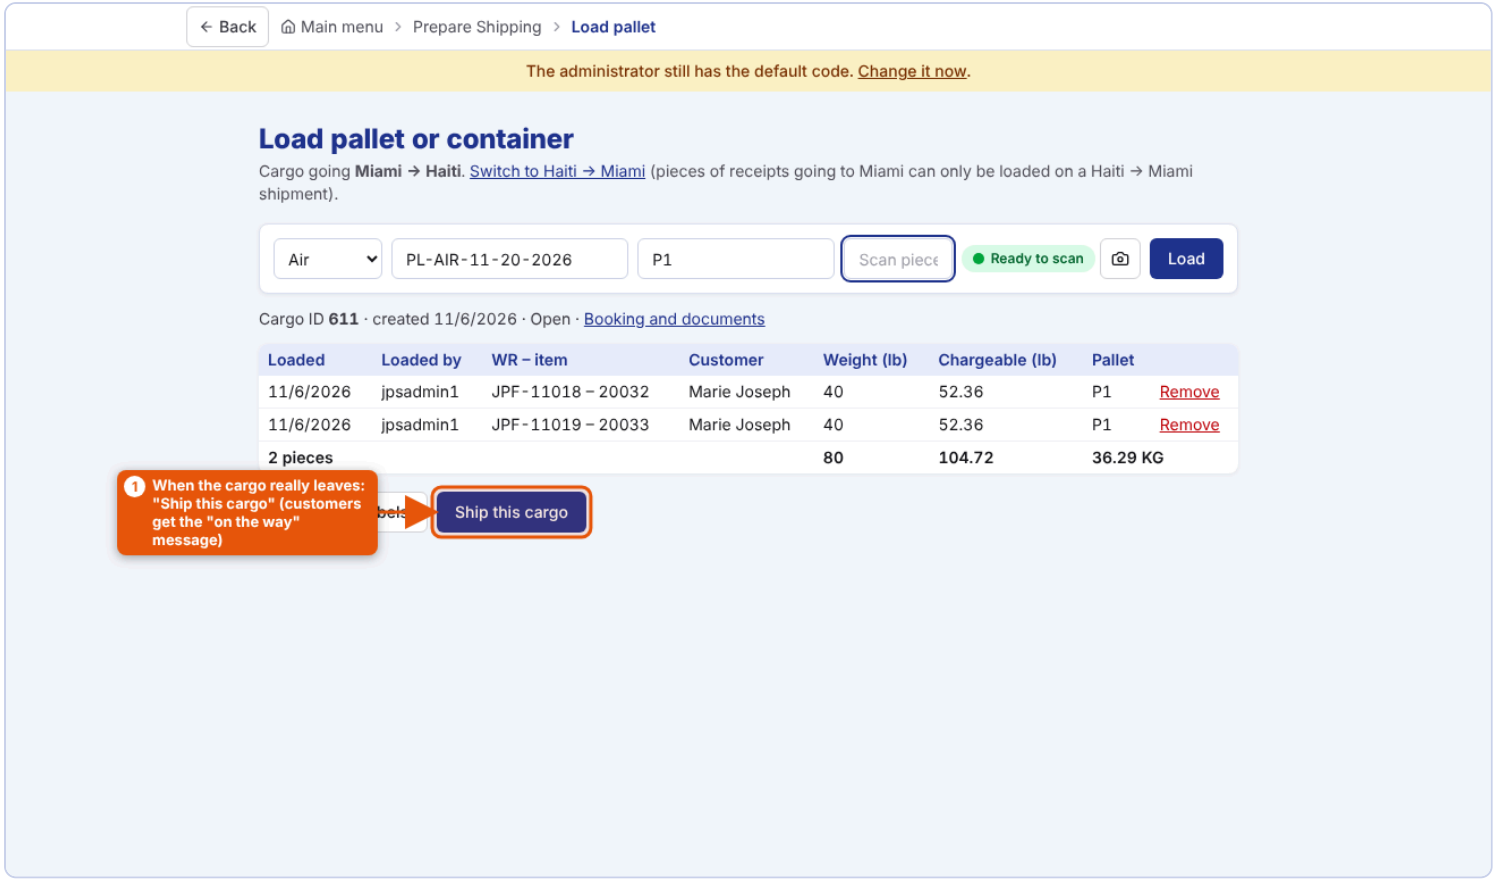

C From the receipt page

A receipt that is not on a cargo yet: from the receipt page, choose the cargo, enter the pallet and click "Add the N piece(s) to this cargo". The same thing, for one receipt.

1. This receipt is not on a cargo yet: choose the cargo
2. Click to put all its pieces on the cargo

D Ship the cargo

Why: The customers get the "on the way" message.

When the cargo really leaves: Load pallet (or the shipment page) → "Ship this cargo". The customers get the "your parcel is on the way" message (e-mail + WhatsApp).

1. When the cargo really leaves: "Ship this cargo" (customers get the "on the way" message)

Tip: If you make a mistake, the administrator can reopen the cargo with "Reopen".

E Rules and error messages

What is possible

- **Several receipts on one cargo:** yes. Tick them on the cargo page, or add them one by one from the receipt page.
- **Several shipments in one cargo:** no. One shipment = one cargo (one Cargo ID). To split the pieces, use several **pallets / containers** (P1, P2…) inside the same cargo.
- **One receipt on several cargos:** yes. Put some pieces on one cargo and the others on another (scan them in Load pallet).

If the system refuses

- **"is Air but … is Ocean":** the receipt and the cargo are not the same type. Choose another cargo.
- **"has no pieces yet":** the receipt has no pieces.
- **"already loaded":** it is already on a cargo.
- **"already shipped":** the cargo already left. The administrator can reopen it.
- **Direction:** parcels going Haiti → Miami cannot go on a Miami → Haiti cargo.
